

Notes and Brief Reports

Employers, Workers, and Wages, Second Quarter, 1952

The number of workers with taxable wages in employment covered

by old-age and survivors insurance in April-June 1952, excluding the self-employed covered by the program, is estimated at 46 million—2.2 percent larger than the total in January-March 1952 and 1.8 percent greater

Estimated number of employers¹ and workers and estimated amount of wages in employment covered under old-age and survivors insurance, by specified period, 1940-52²

[Corrected to Mar. 20, 1953]

Year and quarter	Employers reporting wages ² (in thousands)	Workers with taxable wages during period ³ (in thousands)	Taxable wages ³		All workers in covered employment during period ⁴ (in thousands)	Total payrolls in covered employment ⁴	
			Total (in millions)	Average per worker		Total (in millions)	Average per worker

¹ Number corresponds to number of employer returns. A return may relate to more than 1 establishment if employer operates several separate establishments but reports for concern as a whole.

² Data exclude joint coverage under the railroad retirement and old-age and survivors insurance programs.

³ For quarterly and annual data for 1937-39 see the *Bulletin*, February 1947, p. 31. Quarterly data for other years were in the August 1947, February 1948, and January 1953 issues.

⁴ For a description of the series and quarterly data for 1940 see the *Bulletin*, February 1947, p. 30. Quarterly data for other years were in the February 1948 and January 1953 issues.

⁵ Preliminary.

⁶ Preliminary; includes data for new coverage under the 1950 amendments, except for newly covered self-employed persons and their earnings. In 1951 an estimated 58 million persons, including the self-employed, had taxable earnings of \$119.5 billion, or \$2,060 per person with taxable earnings.

than that in the second quarter of the preceding year. The total number of workers in covered employment (again excluding the self-employed), estimated at 46.5 million, also increased during that period—3.3 percent from the January-March 1952 total and 2.2 percent from that of April-June 1951. These increases are in line with the changes in general employment levels.

Average taxable wages, on the other hand, were estimated at \$707, a decline of 4.2 percent from the first quarter of 1952. This decrease was sharper than the usual seasonal decline observed in past years because of the slightly lower level of average weekly hours and average weekly earnings in manufacturing industries as compared with the first quarter of 1952—a decline that is also reflected in the slight decrease to \$753 in the estimated average wage per worker in covered employment.

Although the workweek in manufacturing industries was shorter in April-June 1952 than in the second quarter of the preceding year, average hourly earnings increased sufficiently to result in higher average weekly earnings in the later period. This rise is reflected in the increases of 4.7 percent in the average taxable wage and of 4.1 percent in the average wage per worker in covered employment, as compared with the averages for the corresponding quarter of the preceding year.

An estimated 3.7 million employers reported payment of taxable wages in the second quarter of 1952. This total was 1.9 percent more than that in January-March 1952 and 1.1 percent greater than in the second quarter of the preceding year.
