Notes and Brief Reports

Old-Age Insurance Benefits, 1952

Benefits Awarded

During 1952, old-age benefits were awarded to 531,000 persons, a decline of 24 percent from the record high established a year earlier. The 1952 figure was, however, almost equal to number of old-age benefits awarded during 1940-44-the first 5 years that awards were made. The benefits for about 58 percent of these persons were "conversion table" benefits: that is, they were based on earnings after 1936 and computed under the old benefit formula, and were increased by use of the conversion table set forth in the 1950 or the 1952 amendments to the Social Security Act. The benefits for the remaining 42 percent of the persons were "newstart formula" benefits-based on earnings after 1950 and the new benefit formula (table 2).

The benefit amounts for almost all the 203,000 old-age benefits awarded during 1952 under the provisions of the 1950 amendments were determined by use of the conversion table (table 1). Slightly more than half of them were awarded to "1939 eligibles" -persons who met the insured-status requirements contained in the 1939 legislation. The remaining 92,000 benefits were awarded to "new eligibles"-persons who qualified for oldage benefits as a result of the liberalized insured-status provisions in the 1950 amendments. Of the 328,000 oldage benefits awarded in 1952 under the 1952 amendments, about twothirds had the benefit amount computed under the new-start formula. Six quarters of coverage after 1950 are necessary for a worker to have his benefit computed under the newstart formula.

Almost one-third of all awards were made to persons aged 65 in 1952. and about 12 percent were made to persons aged 75 or over. In instances where the conversion table was used, only 7 percent of the beneficiaries were aged 75 or over; where the newstart formula was used, about 18 percent were in this age range. Many older persons qualified for benefits because of the extension of coverage in the 1950 amendments; most of these persons obtained the 6 quarters of coverage needed for insured status after 1950 and thus qualified for benefits computed under the new-start formula.

For all persons awarded old-age benefits, regardless of the computation method, the average ages at time of award were 68.6 for men, a decrease of six-tenths of a year from the corresponding figure in 1951, and 68.2 for women, the same average age as in 1951. For persons whose benefits were computed by means of the conversion table, the average ages were 67.7 for men and 67.0 for women. For those whose benefits were determined under the new-start formula. however, the average ages were 69.8 for men and 70.0 for women. The older average ages for this group resulted partly from the relatively large number of awards to persons aged 75 or over who had become insured as a result of the coverage extension provided by the 1950 amendments. Moreover, experience has shown that the proportion of awards at age 65 is higher than at any other age. Doubtless a large number of the awards went to persons who had been out of

Age on birthday in 1952.

¹ Age on Dirtnday in 1952. ² Includes 2,129 old-age benefits computed under the new-start formula (average amount, \$42.80); data on new-start formula benefits by eligibility status not

^{*} Only persons reaching their seventy-seventh birthday during July-December 1952 can qualify as new eligibles.

employment for some period immediately preceding their sixty-fifth birthday. Such individuals could therefore not have acquired the 6 quarters of coverage after 1950 necessary to have their benefits computed under the new-start formula, and the relative number of awards in this age group was smaller than in earlier years. As a result the average age for persons awarded benefits computed under the new-start formula was raised.

The average old-age benefit awarded under the 1952 amendments was \$58.11, about \$18.50 more than the average amount awarded under the 1950 amendments (table 1). Only a part of this increase is attributable to the higher benefits payable under the 1952 legislation. The high average

¹ Includes 2,129 old-age benefits computed under the new-start formula (average amount, \$42.80); data

on new-start formula benefits by eligibility status not available.

² Less than 0.5 percent.

was due chiefly to the large number of awards to persons eligible for benefits computed under the new-start formula, who accounted for two-thirds of the awards under the 1952 amendments and whose average benefit was \$65.92. For benefits deter-

mined by use of the conversion table, the average amount awarded under the 1952 amendments was \$41.49, only \$1.84 more than the average amount awarded under the 1950 amendments — notwithstanding the \$5-8.60 increase in old-age insurance

benefits granted by the conversion table in the 1952 amendments. Awards made in the latter part of 1952 through use of the 1952 conversion table were made to persons with relatively little or no employment after 1950, since almost all persons with 6 quarters of coverage after 1950 had their benefits figured by the newstart formula. On the other hand, for virtually all awards in the first part of 1952 the 1950 conversion table was used. As in the past, the average benefit amount was lower for women than for men; for awards under the 1952 amendments, the differences amounted to \$21.42 for benefits determined under the new-start formula and \$11.54 for those computed on the basis of the conversion table.

For awards under the 1952 amendments, the maximum monthly amount of \$85.00 was payable in 22 percent of the benefits computed under the new-start formula, while the minimum monthly amount of \$25.00 was payable in only 4 percent of the cases (chart 1 and table 3). In contrast, a monthly benefit of \$77.10—the maximum monthly amount when the conversion table was used—was payable in less than 1 percent of such awards, while \$25.00 was payable in 37 percent of the cases.

Benefits in Current-Payment Status

The number of persons receiving old-age benefits totaled more than 2.6 million by the end of December 1952: the average monthly benefit was \$49.25. Persons receiving benefits computed under the new-start formula comprised about 9 percent of the total (234,900). This figure includes a number of old-age beneficiaries who had originally become entitled to benefits computed by means of the conversion table but who had remained at or returned to work and became eligible to have their benefits recomputed under the new-start formula. The average monthly amount for persons receiving benefits determined by the new-start formula was \$66.16, compared with \$47.60 for persons for whom the conversion table was used.
