

Employment and Wages of Workers Covered by State Unemployment Compensation Laws, 1939*

INDUSTRIES COVERED BY State unemployment compensation laws probably participated to a greater extent than industry as a whole in the general economic improvement that characterized the year 1939. This is one of the conclusions to be drawn from a preliminary analysis of data on employment and wages of covered workers.¹ Covered employment in December 1939 totaled 22 million, 9.2 percent more than in December 1938; estimates published by the Bureau of Labor Statistics show only a 5.8-percent increase in nonagricultural employment as a whole over the 12-month period.² Wages earned in covered employment totaled 12.1 percent more in the last quarter of 1939 than in the same quarter of 1938. The comparable gain in aggregate salaries and wages in the Nation as a whole, however, equaled only 5.6 percent, according to estimates of the Department of Commerce.

At the beginning of 1939, nonagricultural employment and industrial production in the United States had reached a plateau following the pronounced recovery during the last half of 1938 from the trough of the 1937-38 recession. This level was maintained, except for normal seasonal changes, until the beginning of the European war in September 1939. Thereafter, a marked expansion occurred in the volume of production and in the flow of wage payments to individuals, particularly in the durable-goods industries, a group which is virtually wholly covered by State unemployment compensation laws.

Description of the Data

During 1937, statistics on the employment and wages of workers covered by the unemployment compensation program were compiled by only a few States. Although all States submitted reports

*Prepared in the Division of Research and Statistics, Bureau of Employment Security.

¹ A detailed analysis of 1939 data will be published this summer, similar to the monograph on 1938 data (Bureau of Employment Security, *Employment and Pay Rolls in State Unemployment Compensation Systems 1938*, Employment Security Memorandum No. 8, Washington, D. C., April 1940).

² The BLS series used for comparative purposes is that entitled "Employees in Nonagricultural Establishments," which does not include self-employed persons, casual workers, domestic servants, or the military and naval forces of the Government.

for 1938, industry data for all States became first available only with the 1939 reports.³ Detailed comparisons between the 2 years are difficult, however, because of revisions in the classification of industries, the shift of railroad employees from coverage under State laws to inclusion under a federally administered law, various extensions of coverage to formerly excluded firms, and other changes. In the following analysis, railroad employment and wages have been excluded. The data include Alaska and Hawaii, in addition to the 48 States and the District of Columbia.

³ Industry data were lacking only for Pennsylvania in 1938.

Chart 1.—Average monthly number of workers in employment covered by State unemployment compensation laws, by State, 1939

Other limitations attach to employment and wage data for covered workers. Their scope varies from State to State, depending on the provisions determining the size-of-firm and type-of-employment exclusions under the State unemployment compensation laws. Differences among the States

are relatively minor for the latter, but variations in size-of-firm exclusions significantly affect the data. In 1939 approximately half the States patterned their coverage after the Federal Unemployment Tax Act by including only firms with eight or more workers, 10 included all firms with

¹ As of last pay-roll periods ended in month. Includes workers receiving wages in excess of \$3,000 a year in all periods in which they were on pay roll. Excludes data for railroads and other groups subject to Railroad Unemployment Insurance Act.

² Represents number of workers employer must have for specified period to be subject to State law.

³ And total wages of \$78 or more in a quarter.

⁴ And wages of at least \$50 to each of 4 workers in each of 3 quarters; or 8 or more workers within 20 weeks of calendar year.

⁵ And total annual wages of \$500 or more.

⁶ And total wages of \$225 or more in a quarter.

⁷ For January-June, 4 or more workers in each of 20 different weeks of calendar year; for July-December, 2 or more workers within 13 weeks of calendar year, or total wages of \$450 or more in a quarter.

⁸ Data include approximately 23,000 workers in domestic service in private homes; such service is excluded under laws of other States.

⁹ And total wages of \$600 or more in a quarter.

¹⁰ For January-June, 4 or more workers; for July-December, total wages of \$450 or more in a quarter.

¹¹ Data include 13,600 non-Federal Government workers in January-June and 5,000 in July-December; such service is excluded under laws of other States. State amendment effective July 1, 1939, excluded certain government employees.

¹² Or total annual wages of \$6,000 or more if employer's records do not permit accurate count of workers.

¹³ And total wages of \$150 or more in a quarter.

one or more employees, and the remaining States ranged between these limits.

The employment figures, moreover, represent the number of covered employees on pay rolls during the last pay periods ended within each month, whereas earnings represent the total amount of wages paid to all covered workers during each calendar quarter. As a result, employment and wage data are not strictly comparable, since a number of workers employed at some time in a calendar quarter will not be included in the final pay rolls of any of the 3 months in the quarter. Averages derived by dividing wages by employment, therefore, have little economic significance.

In addition, New York reported taxable wages only, thereby excluding individual employee annual earnings in excess of \$3,000 from any one employer. This limitation especially affects the wage pattern for those industries in which New York predominates, especially finance, insurance, and real estate.

National Trends

The expansive effect of increased production upon pay rolls, stimulated in part by foreign developments, is demonstrated by the relatively higher level of employment and earnings of covered workers during 1939 than in 1938. Employment of covered workers in March 1939 approximated 20.8 million, only 4.7 percent above March 1938. By June, however, the increase over the same month of 1938 was 9.3 percent, and in September it reached 9.7 percent. Although covered employment declined slightly at the end of the year, the December 1939 total of nearly 22 million was still 9.2 percent more than the total for December 1938. Parallel increases were reported for employment included under the Federal old-age and survivors insurance program, which covers all employers of one or more workers in virtually the same services subject to the Federal Unemployment Tax Act. The number of employees earning taxable wages under the old-age and survivors insurance program during the last pay period of March 1939 totaled 4.1 percent more than during March 1938, according to data collected by the Bureau of Old-Age and Survivors Insurance. By the end of June, the difference amounted to 10.0 percent. In September the 9.7-percent divergence was identical with that for unemployment insurance. A slight decline fol-

lowed, but covered employees still totaled 8.9 percent more in December 1939 than in December 1938.

¹ Represents wages paid or payable according to State law. Except in New York, includes wages in excess of \$3,000 a year for a worker in covered employment. In 3 States and New York this excess was not taxable (see footnotes 2-5). Data for railroads and other groups subject to Railroad Unemployment Insurance Act excluded. For size-of-firm inclusion under State law see table 1.

² Of this amount, \$1,484,751,000 represents taxable wages; State law excludes wages in excess of \$3,000 a year for a worker from any 1 employer.

³ Data represent taxable wages; State law excludes wages in excess of \$3,000 a year for a worker from any 1 employer. Include \$30,473,000 in taxable wages for domestic service in private homes; such service is excluded under laws of other States.

⁴ Data represent total wages, on which employers were taxable under State law; for employer contributions, taxable wages were \$210,741,000, because individual employee annual wages in excess of \$3,000 were not taxable.

⁵ Of this amount, \$158,053,000 represents taxable wages. Wages in excess of \$3,000 a year for a worker from any 1 employer nontaxable for July-December under State amendment effective July 1, 1939.

⁶ Data include \$3,886,000 in taxable wages for non-Federal Government employees; such service is excluded under laws of other States. Wages were \$5,931,000 in January-June and \$2,955,000 in July-December; State amendment effective July 1, 1939, excluded certain government employees.

In contrast, the Bureau of Labor Statistics estimates of nonagricultural employment do not indicate so sharp a rise. Employment in both June and December 1939 totaled only 5.8 percent above the same months of 1938. Since a substantial increase in employment occurred generally during the latter half of 1938, the relatively greater employment of covered workers during the second half of 1939 is all the more striking. It probably reflects the concentration of covered employment in industries which are most likely to be influenced by wartime industrial expansion.

For the entire year 1939, average monthly employment of covered workers under State unemployment compensation programs totaled 21.4 million, 7.0 percent more than an estimated average of 20.0 million for 1938. Average monthly nonagricultural employment⁴ was only 4.1 percent higher in 1939 than in 1938, according to the Bureau of Labor Statistics estimates. The number of workers covered by unemployment compensation laws equaled about 75 percent of all wage earners in nonagricultural employment and approximately 85 percent of all workers covered by Federal old-age and survivors insurance.

Except for relatively slight declines in April and July, covered employment rose steadily from 20.2 million in January 1939 to a peak of 22.5 million in October. April employment was affected by a widespread stoppage in the bituminous coal industry; the downturn in July is attributable largely to normal seasonal movements. The usual seasonal decline in construction, coupled with a slackening of the war stimulus to industrial activity, probably accounted for the 2.1-percent decline during the last 2 months of the year.

Wages earned in covered employment increased proportionately more than employment, probably because of rising wage rates and an increase in average weekly hours of work. Wages totaled \$28.5 billion in 1939, 10.7 percent more than in 1938. The trend corresponded to that for average monthly employment, although at a higher level. First-quarter wages totaled 6.8 percent more in 1939 than in 1938; in the second quarter the gain was 10.9 percent; in the third quarter, 13.1 percent; and in the fourth, 12.1 percent. Between the first and fourth quarters of 1939, wages earned in covered employment increased 19.0 percent,

whereas during 1938 the corresponding advance was only 13.3 percent.

Industrial Distribution

Manufacturing industries accounted for 45.5 percent of average monthly employment during 1939 and paid 45.7 percent of total wages earned in covered employment. The proportion of employment and wages was also virtually identical for construction—4.5 and 4.4 percent—and for mining—3.8 and 3.0 percent, respectively.

Wholesale and retail trade ranked next to manufacturing in the concentration of covered workers. This group included 25.2 percent of average monthly employment and 23.7 percent of total wages paid during 1939. Service industries accounted for the third largest number of covered workers—8.1 percent—but in wages ranked fourth with 7.1 percent. Ranking third with respect to wages was the industry group consisting of transportation, communication, and other public utilities, with 8.5 percent of all wages paid in covered employment. This group ranked fourth in the proportion of average monthly employment—7.5 percent. Industries classified as finance, insurance, and real estate accounted for 4.9 percent of average monthly employment and 6.2 percent of total wages paid. In the latter two industry groups, the fact that the proportion represented by wages is higher than that for employment is probably due to higher annual earnings, because of more regular employment, higher wage rates, or overtime pay.

The sharp expansion in employment which characterized the last half of 1939 was led by a substantial increase in mining and was shared by manufacturing, transportation, and wholesale and retail trade. Preliminary analysis does not indicate how much of this increase was attributable to seasonal movements and how much to the stimulus of war abroad. It is significant, however, that covered employment in manufacturing in December 1939 was 7.3 percent higher than in March. On the other hand, old-age and survivors insurance data, which include information on small firms less sensitive to war repercussions than the larger ones covered by most unemployment compensation laws, indicate only a 4.4-percent increase from March to December.

In contrast to the general upward tendency of these four industry groups, covered employment in the highly seasonal construction industry fluctuated

⁴ See footnote 2.

Table 3.—Number of workers in employment covered by State unemployment compensation laws, by major industry group and month, 1939

[Data reported by State agencies, corrected to Feb. 24, 1941; amounts in thousands]

Table 4.—Wages in employment covered by State unemployment compensation laws,¹ by major industry and quarter, 1939

[Data reported by State agencies, corrected to Feb. 24, 1941; amounts in thousands]

Industry division and major industry group	Total			January-March	April-June	July-September	October-December
	Amount	Percent of total	Percent of industry division				
Total	\$28,518,053	100.0	100.0	\$0,574,822	\$0,935,460	\$7,183,498	\$7,824,274
Mining	1,110,283	3.0	100.0	274,585	237,030	284,004	323,004
10. Metal mining	101,955	.6	14.5	26,600	33,900	40,808	45,881
11. Anthracite mining	123,998	.4	11.0	31,284	87,060	25,806	29,500
12. Bituminous and other soft-coal mining	453,517	1.0	40.5	110,578	66,680	120,032	140,727
13. Crude-petroleum and natural-gas production	207,509	1.0	20.6	70,817	73,305	74,722	78,005
14. Nonmetallic mining and quarrying	82,614	.3	7.4	16,830	20,210	22,480	23,582
Construction	1,250,211	4.4	100.0	226,125	325,742	350,052	342,292

Miscellaneous	135,665	.5	100.0	27,401	37,058	34,070	36,233

¹ For definition of wages, see table 2, footnote 1.

² Includes major industry group 34 (transportation equipment, except automobile).

³ Reported by New York only; excluded from coverage in other States.

⁴ Reported by Wisconsin only; excluded from coverage in other States.

⁵ Less than 0.05 percent.

⁶ Includes agriculture, forestry, fishery, and establishments not elsewhere classified.

tuated widely during the year. From a low of 733,000 in February it rose 52.7 percent to a peak of 1.1 million in August, thereafter declining 27.5 percent to 811,000 by the end of December, but still 8.9 percent more than in the first month of the year.

Only in the industry group of finance, insurance, and real estate did the number of covered workers remain virtually steady throughout 1939. This group was also the only one with fewer employees at the end of the year than at the beginning; the decline—less than 1 percent—occurred in the last 2 months of the year.

Covered employment in the service industries, of which personal service is the largest, rose gradually from January to June, then declined slightly before attaining a point in September 7.3 percent above January. Thereafter, it declined by the end of December to a total only 2.2 percent above the January figure.

Industrial trends in quarterly wages in covered employment generally followed the same patterns, with the exception of the finance, insurance, and real estate group. In this group, wages declined more than \$10 million from the first to the second quarter, and an almost equal drop took place between the second and third quarters, although no comparable decrease occurred in the number of workers employed. However, if the data for New York, which reported only taxable wages, were omitted, the trend throughout the year would have shown a steady increase, from \$298 million in the first quarter to \$338 million in the fourth. Exclusion by New York of wages for an individual worker in excess of \$3,000 a year from any single employer tends to understate increasingly the amount of wages paid during the last 3 quarters of the year.

State Industrial Patterns

The data also reflect the high concentration of industry in certain sections of the country. New York and Pennsylvania each reported average monthly employment of more than a million workers in manufacturing and with 5 other large industrial States—Illinois, Massachusetts, Michigan, New Jersey, and Ohio—accounted for almost 57 percent of all covered employment in manufacturing. This distribution corresponds to that which was obtained by the 1939 census of manufactures.

New York and Pennsylvania also led in the number of covered workers engaged in trade; combined with California and Illinois they contained more than 39 percent of all covered workers in this industry. These same four States also included 47 percent of all covered service workers, California ranking second because of its motion picture industry.

Workers in transportation, communication, and other public utilities were similarly concentrated. Slightly more than half of the covered workers in this group were employed in New York, Illinois, Pennsylvania, California, Texas, and Ohio. Even less dispersion appeared in finance, insurance, and real estate; because of the paramount position of New York City's financial institutions, New York State alone accounted for 31 percent of the average monthly employment—more than the combined total for Pennsylvania, California, and Illinois, which had the next largest numbers. Pennsylvania and West Virginia, centers of the coal-mining industry, accounted for 36 percent of total average monthly employment in mining. Construction workers, however, were less heavily concentrated, although New York and Pennsylvania again predominated.
