Social Security—Reinforcing the Foundation of U.S. Retirement in a Time of Uncertainty
Social Security Actuarial Status

The 2020 Annual Report of the Board of Trustees of the OASI and DI Trust Funds

...and Developments Since Then

Karen Glenn, Deputy Chief Actuary
Social Security Administration
November 6, 2020
Social Security Basics
Social Security Trust Funds

- Two legally distinct trust funds:
  - **OASI** = Old-Age and Survivors Insurance
  - **DI** = Disability Insurance
- Financial operations are overseen by the Social Security Board of Trustees
- The two funds are often looked at on a theoretical combined basis, and referred to as **OASDI**
  - As of September 30, 2020, the trust funds hold about **$2.91 trillion** in reserves
Social Security Trust Funds

• Why do we have trust funds?
  – The trust funds provide an essential reserve so benefits can be paid even when current income alone is not enough
  – Social Security (OASI and DI) cannot borrow; can only spend what has been collected
Social Security Trust Funds

• The combined funds have run surpluses since the early 1980s and through calendar year 2019 (and likely 2020)
• Beginning in 2021, we project that combined asset reserves will start to decline until they are depleted in 2035
• The OASI fund alone is projected to be depleted in 2034; the DI fund alone in 2065
• Note that these latter two bullets are based on our pre-COVID projections!
How Is Social Security Financed (Income)?

• Payroll taxes
  – Employees and employers each pay 6.2% of covered earnings
  – The self-employed pay 12.4% of covered earnings
  – On earnings up to $137,700 in 2020 ($142,800 in 2021)

• Taxes on Social Security benefits
  – Higher-income beneficiaries pay federal income tax on their benefits

• Interest on trust fund reserves
  – Invested in interest-bearing securities of the US government
Where Does the Money Go (Cost)?

• Benefit payments
  – About 64 million people getting benefits as of December 2019:
    • 48 million retired workers and dependents of retired workers
    • 6 million survivors of deceased workers
    • 10 million disabled workers and dependents of disabled workers

• Administrative expenses
  – Only about 0.6 percent of total program cost in 2019
Income and Cost for Calendar Year 2019

Payroll taxes
$944 billion

Benefits
$1,048 billion

Combined OASI & DI Trust Funds

Taxes on benefits
$36 billion

Interest
$81 billion

Administrative expenses
$6 billion

Railroad exchange
$5 billion
2020 Trustees Report
What is the Legislative Mandate for the Annual Trustees Report?

1. Trust Fund operations of the past year and the next five years
2. Actuarial status of the trust funds
   - This means the ability to meet the cost of scheduled benefits with scheduled revenue and trust fund reserves
   - And the extent to which scheduled revenue would fall short under current law, indicating the size of legislative changes that will be needed
Primary Changes for the 2020 Trustees Report

First, an important caveat! The projections in the 2020 Trustees Report (released April 22, 2020) do NOT reflect the potential implications of the COVID-19 pandemic, due to (1) the timing of the development of assumptions for the report and (2) the timing of the recognition of the pandemic.

1. DI reserve depletion extended another 13 years, from 2052 to 2065
   a) Applications and benefit awards remained at historically low levels in 2019
   b) Lower ultimate assumed disability incidence rate
   c) Gradual increase to ultimate incidence rate
2. OASI reserve depletion is 2034, the same as in the 2019 report
3. OASDI reserve depletion is 2035, the same as in the 2019 report
4. 75-year actuarial deficit increased by 0.43 percent of payroll (versus expected increase of 0.05 percent from change in valuation period alone)
SOLVENCY: Annual Cost and Non-Interest Income as Percent of Taxable Payroll

Persistent negative annual cash-flow balance starting in 2010.
79 percent of scheduled benefits still payable at trust fund reserve depletion.
Annual Deficit in 2094: 4.51 percent of payroll – 0.36 percent larger than last year

Historical vs. Projected Costs and Non-Interest Income

Cost: Scheduled and payable benefits
Cost: Scheduled but not fully payable benefits
Non-interest Income
Expenditures: Payable benefits = income after trust fund depletion in 2035

Payable benefits as percent of scheduled benefits:
2020-34: 100%
2035: 79%
2094: 73%

SUSTAINABILITY: Cost as percent of GDP

Rises from a 4.2 percent average in 1990-2008, to about 5.9 percent by 2038, then declines to 5.8 percent by 2053, and generally increases to 5.9 percent by 2094.
Aging: Change in Age Distribution

Mainly due to drop in birth rates
ADEQUACY: Replacement Rates Based on the 2020 TR

Payable Benefits Under the Law, After Trust Fund Reserves Are Depleted, Are Even Lower

**PAYABLE Monthly Benefit Levels as Percent of Career-Average Earnings by Year of Retirement at age 65**

Historical

- Low Earner ($25,039 for 2020; 24th percentile)
- Medium Earner ($55,642 for 2020; 57th percentile)
- High Earner ($89,027 for 2020; 81st percentile)
- Max Earner ($137,700 for 2020; 100th percentile)

Projected

Calendar Year

Effects of COVID-19
After the 2020 Trustees Report: COVID Effects

• Employment and labor force participation rates have declined along with the COVID-induced recession—will they remain low, or rebound soon?

• Will there be persistent and even cumulative effects on mortality (and morbidity) in the longer term?
  – Direct virus-related immediate deaths, whether diagnosed or not
  – Indirect deaths due to avoidance of medical treatment
  – Increased deaths of despair/violence—suicide, homicide, overdose?
  – Decreased life expectancy from compromise for COVID survivors; how much?

• Other economic and demographic effects? Fertility, immigration?

• So much depends on government and individual responses, along with the timing and efficacy of a vaccine
COVID Effects: GDP, Earnings, and Payroll Tax Revenue

• Social Security payroll tax revenue will certainly be lower than we projected for 2020 due to lower earnings—by between 5 and 10 percent
  – Technicality: due to the way tax revenues are transferred from Treasury to the Social Security trust funds, the trust funds won’t be affected until 2021

• Neither the employer payroll tax deferral in COVID legislation nor the employee payroll tax deferral in the presidential memorandum affect revenue to the trust funds

• What will effects be beyond 2020? There has been a substantial economic recovery since the second quarter of 2020
COVID Effects: Timing of Benefit Applications

• There has been speculation in the press and elsewhere that the COVID-induced recession will cause workers to apply for retirement benefits earlier than they would have otherwise

• We aren’t seeing this in the data—yet

• Similarly, we aren’t yet seeing evidence of increased DI or SSI applications

• Speculation is that folks have been relying on extended unemployment benefits, but might start applying earlier if the recession persists

Source: https://www.ssa.gov/oact/STATS/dibGraphs.html
Bottom Line: Effects of COVID on Trust Funds

• In April, we speculated a potential 15 percent reduction in earnings and payroll tax for one or two years, and then full recovery: Trust Fund reserve depletion advanced from early 2035 to mid- or early 2034
  – We now think this speculation was probably too pessimistic

• Now, consider an alternative scenario: assume total earnings in 2020 are reduced 5 to 10 percent below the 2020 TR intermediate projection, with recovery in 2021 and 2022
  – This could happen if there is no substantial wave in the fall with resulting closure of the economy
  – The trust fund reserve depletion date for the combined OASI and DI Trust Funds would likely be sometime in 2034, all else equal
  – In September, CBO estimated that COVID would hasten trust fund depletion by one year
Bottom Line: Effects of COVID on Trust Funds

• If, instead, a fall/winter return to closure due to the pandemic extends through 2021, and possibly beyond, then negative effects on the actuarial status could be substantially larger

• Trust Fund reserve depletion could be earlier than 2034, and the percent of scheduled benefits payable after depletion could be reduced

• The Bipartisan Policy Center recently released several possible scenarios, with the most pessimistic leading to OASDI combined trust fund reserve depletion 7 years earlier (2028)
Bottom Line: Effects of COVID on Trust Funds

• The 2021 Trustees Report, scheduled to be released in April 2021, will reflect our best estimates of the impacts of COVID-19

• We have had, and will continue to have, many discussions about assumptions with the trustees and their staffs...

• And we will continue to monitor emerging experience and knowledge about the virus and vaccines/therapies
Legislative Changes
Why Do These Actuarial Projections Matter?

• Long-term projections provide information to assess solvency and changes needed to eliminate shortfalls

• If trust fund reserves were to become depleted:
  • Full benefits could not be paid timely
  • NO pressure on the budget or federal debt
  • So Congress must act, as it always has

• Straightforward solutions:
  • Add revenue and/or lower cost for OASDI
  • Comprehensive changes implemented by 2035
How to Eliminate the Long-Term Actuarial Deficit

• Make choices addressing OASDI deficits 2035–2094:
  • Raise scheduled revenue after 2034 by about one-third
  • Reduce scheduled benefits after 2034 by about one-fourth
  • Or some combination of the two
Ways to Lower Cost

• Lower benefits for retirees—not disabled?
  • Increase normal retirement age (lowers OASI cost, but increases DI cost)
  • Can exempt long-career low earners

• Lower benefits mainly for high earners?
  • Reduce PIA above some level
  • Often combined with increasing PIA below some level, subject to work year requirements

• Lower benefits mainly for the oldest old?
  • Reduce the COLA
  • But, some say increase it with the CPI-E (based on purchase of consumers over age 62)
Ways to Increase Revenue

• Raise the 12.4 percent OASDI payroll tax rate?
• Raise tax on highest earners?
  • Increase taxable maximum amount ($142,800 in 2021)
  • Some tax on all earnings above the maximum
• Tax employer group health insurance premiums?
  • Affects only middle class if taxable maximum remains
• Tax investment income?
  • Or potentially a wealth tax?
