

February 4, 2016

The Honorable Bernie Sanders United States Senate Washington, D.C. 20515

Dear Senator Sanders:

I am writing in response to your request for updated estimates of the financial effects on Social Security of S. 731, *The Social Security Expansion Act*, which you introduced on March 12, 2015. The estimates provided here reflect the intermediate assumptions of the 2015 Trustees Report, whereas estimates provided in the letter dated March 26, 2015 reflected the assumptions in the 2014 Trustees Report. This Bill (hereafter referred to as the proposal) includes five provisions with direct effects on the Social Security Trust Funds. Note that for the purpose of this updated estimate, we are assuming that sections 4, 5, 6, and 7 of the Bill would become effective starting in 2017 rather than in 2016. In addition, the estimates provided here do not reflect the estimated effects of the Bipartisan Budget Act (BBA) of 2015, which was enacted after completion of the 2015 Trustees Report. Including the effects of the BBA would provide a small further improvement in the projected actuarial status of the Social Security Trust Funds. We have enjoyed working closely with Jeff Cruz and Caryn Compton of your staff in developing this proposal to meet your goals.

The enclosed tables provide estimates of the effects of the five provisions on the cost, income, and combined trust fund reserves for the Old Age, Survivors, and Disability Insurance (OASDI) program, as well as estimated effects on retired worker benefit levels for selected hypothetical workers. In addition, tables 1b and 1b.n provide estimates of the Federal budget implications of the five provisions. Assuming enactment of the proposal, we estimate the funding for the combined OASI and DI Trust Funds would be sufficient to extend the projected year of reserve depletion from 2034 to 2074, under the intermediate assumptions of the 2015 Trustees Report.

Estimates for the combined OASI and DI Trust Funds are consistent with an intent to reallocate the total tax rate as needed to equalize the years of reserve depletion and generally the actuarial status of the two separate trust funds. The estimates and analysis provided here reflect the combined effort of many in the Office of the Chief Actuary, but most particularly Karen Glenn, Christopher Chaplain, Daniel Nickerson, Jason Schultz, Kyle Burkhalter, Anna Kirjusina, Katie Sutton, and Tiffany Bosley.

The proposal includes five basic provisions with direct effects on the OASDI program. The following list identifies each provision with the corresponding section number in the Bill:

Page 2 – The Honorable Bernie Sanders

Section 2. Increase the first PIA bend point above the current law level for beneficiaries newly eligible after 2020. Phase in an ultimate 15-percent increase in the first bend point by raising it 1 percent above the current level for beneficiaries newly eligible in 2021, 2 percent for beneficiaries newly eligible in 2022, and so on, until it reaches 15 percent for beneficiaries newly eligible in 2035 and later.

Section 3. Use the Consumer Price Index for the Elderly (CPI-E) to calculate the cost-ofliving adjustment (COLA), beginning with the December 2016 COLA. We assume this change would increase the COLA by an average of 0.2 percentage point per year.

Section 4. Increase the special minimum PIA for workers who die or become newly eligible for retirement or disability benefits in 2017 or later. For beneficiaries newly eligible in 2017, the minimum initial PIA for workers with 30 or more years of coverage (YOCs) is 125 percent of the annual poverty guideline for a single individual, as published by the Department of Health and Human Services for 2015, divided by 12. For beneficiaries newly eligible after 2017, the minimum initial PIA increases by the growth in the SSA average wage index (AWI).

Sections 5 and 6. Apply the combined OASDI payroll tax rate on earnings above \$250,000, effective for 2017 and later. Tax all earnings once the current-law taxable maximum exceeds \$250,000. Do not credit the additional taxed earnings for benefit purposes.

Section 7. Apply a separate 6.2-percent tax on investment income, as defined in the Affordable Care Act (ACA), with unindexed thresholds as in the ACA, effective for 2017 and later. The ACA thresholds are \$200,000 for a single filer and \$250,000 for a married couple filing jointly. Under this provision, there is no limit on the amount taxed.

The balance of this letter provides a summary of the effects of the five provisions on the actuarial status of the OASDI program, our understanding of the specifications and intent of each provision, and descriptions of our detailed financial estimates for trust fund operations, benefit levels, and implications for the Federal budget.

#### Summary of Effects of the Proposal on OASDI Actuarial Status

Figure 1 below illustrates the estimated change in the combined Old-Age and Survivors Insurance (OASI) and Disability Insurance (DI) Trust Fund reserves, expressed as a percent of annual program cost, assuming enactment of the five provisions of this proposal. Assuming enactment of the proposal, we estimate the year of depletion of the combined OASI and DI Trust Fund reserves would be extended from 2034 under current law to 2074, under the intermediate assumptions of the 2015 Trustees Report.

Note: *Trust Fund Ratio* for a given year is the ratio of reserves in the combined OASI and DI Trust Funds at the beginning of the year to the cost of the program for the year.

Under current law, 79 percent of scheduled benefits are projected to be payable in 2034 after depletion of the combined trust fund reserves, with the percentage payable declining to 74 percent for 2074 and to 73 percent for 2089. Under the proposal, 88 percent of scheduled benefits are projected to be payable in 2074 after depletion of the combined trust fund reserves, with this percentage declining to 87 percent for 2089. Enactment of the five provisions of this proposal would reduce the long-range OASDI actuarial deficit of 2.68 percent of taxable payroll under current law to 0.49 percent of payroll for the long-range period.

Figure 2 illustrates annual projected levels of cost, expenditures, and non-interest income as a percent of the present-law taxable payroll. The projected level of cost reflects the full cost of scheduled benefits under both present law and the proposal. Under the proposal, projected expenditures equal the full cost of scheduled benefits through 2073, the year prior to trust fund reserve depletion.

Beginning in 2017, OASDI program cost is higher under the proposal than under current law. This difference in program cost increases quickly at first, then increases gradually over time to about 1.4 percent of current-law payroll by 2089. Non-interest income under the proposal is also higher than under current law, with the difference in non-interest income growing from 2.1 percent of present-law payroll for 2017 to 3.6 percent of present-law payroll by 2089. The proposal improves the annual balance (non-interest income minus program cost) by 2.6 percent of payroll for 2034, with the improvement declining to 2.2 percent of payroll for 2089. Under the proposal, the annual balance is negative in 2015 and 2016, positive in 2017 through 2026, and then negative through the end of the long-range period. The annual deficit generally increases to 2.5 percent of payroll for 2089. Under current law, the projected annual deficit for 2089 is 4.7 percent of payroll.

It is also useful to consider the projected cost, expenditures, and income for the OASDI program expressed as a percentage of Gross Domestic Product (GDP). Figure 3 below illustrates these levels under both current law and the proposal.

#### **Specification for Provisions of the Proposal**

Section 2. Increase the first PIA bend point above the current law level for beneficiaries newly eligible after 2020.

Under current law, any portion of the AIME that is below the first PIA bend point is multiplied by a factor of 0.90 in computing the PIA. The first bend point is changed (indexed) for each year by the increase or decrease in the AWI from the third prior year to the second prior year. This provision would increase the level of the first PIA bend point, from the level that would apply under current law, by 1 percent for beneficiaries newly eligible in 2021, by 2 percent for beneficiaries newly eligible in 2022, and so on, until it reaches 15 percent for beneficiaries newly eligible in 2035 and all subsequent years.

We estimate that enactment of this provision alone would increase the long-range OASDI actuarial deficit by 0.37 percent of taxable payroll and would increase the annual deficit for the 75<sup>th</sup> projection year (2089) by 0.71 percent of payroll.

Section 3. Use the CPI-E to calculate the COLA, starting with the December 2016 COLA.

Under current law, the annual cost-of-living adjustment (COLA) applied to Social Security benefits is calculated using the Consumer Price Index for Urban Wage Earners and Clerical

Workers (CPI-W). We estimate that using the Consumer Price Index for the Elderly (CPI-E), instead of the CPI-W, beginning with the December 2016 COLA would increase the COLA by 0.2 percentage point per year on average.

We estimate that enactment of this provision alone would increase the long-range OASDI actuarial deficit by 0.38 percent of taxable payroll and would increase the annual deficit for the 75<sup>th</sup> projection year (2089) by 0.53 percent of payroll.

Section 4. Increase the special minimum PIA for workers who die or become newly eligible for retirement or disability benefits in 2017 and later.

Under this provision, the minimum initial PIA for worker beneficiaries newly eligible in 2017 with 30 or more years of coverage (YOCs) would be 125 percent of the annual poverty guideline for a single individual, as published by the Department of Health and Human Services for 2015, divided by 12. For those with less than 30 YOCs, the minimum PIA per YOC in excess of 10 is the minimum PIA for workers with 30 or more YOCs, divided by 20. Any year in which a worker earns 4 quarters of coverage is determined to be a YOC. For beneficiaries newly eligible after 2017, the initial PIA per YOC in excess of 10 is indexed by growth in the SSA average wage index (AWI) to determine the minimum applicable for the year of initial eligibility. After the year of initial eligibility, the minimum PIA per YOC is increased by the COLA.

We estimate that enactment of this provision alone would increase the long-range OASDI actuarial deficit by 0.17 percent of taxable payroll and would increase the annual deficit for the 75<sup>th</sup> projection year (2089) by 0.26 percent of payroll.

## Sections 5 and 6. Apply the combined OASDI payroll tax rate on earnings above \$250,000, effective for 2017 and later.

This provision applies the OASDI payroll tax rate to earnings above \$250,000 in 2017 and later. The \$250,000 level is a fixed amount after 2017 and not indexed to the average wage increase. All earnings would be taxed once the current-law taxable maximum exceeds \$250,000, which is projected to occur in 2034. Any earnings above the higher of \$250,000 or the current-law taxable maximum in a given year would not be credited for benefit computation purposes.

We estimate that enactment of this provision alone would reduce the long-range OASDI actuarial deficit by 2.15 percent of taxable payroll and would reduce the annual deficit for the 75<sup>th</sup> projection year (2089) by 2.46 percent of payroll.

## Section 7. Apply a separate 6.2-percent tax on investment income, as defined in the Affordable Care Act (ACA), with unindexed thresholds as in the ACA, effective for 2017.

The ACA thresholds for Modified Adjusted Gross Income, or MAGI (AGI with adjustments for specific circumstances), are \$200,000 for a single filer and \$250,000 for a married couple filing jointly. This provision applies a 6.2 percent Social Security tax to the lesser of MAGI above these thresholds and total investment income, in the same way as the 3.8 percent tax on

investment income that went into effect in 2013 under the ACA. Under this provision, there is no limit on the amount taxed.

We estimate that enactment of this provision alone would reduce the long-range OASDI actuarial deficit by 0.93 percent of taxable payroll and would reduce the annual deficit for the 75<sup>th</sup> projection year (2089) by 1.16 percent of payroll.

#### **Detailed Financial Results for the Provisions of the Proposal**

### **Summary Results by Provision**

**Table A** provides estimates of the effects on the OASDI long-range actuarial balance for each of the five provisions of the proposal separately and on a combined basis. The table also includes estimates of the effect of each provision on the annual balance (the difference between income rate and the cost rate, expressed as a percent of present-law taxable payroll) for the 75<sup>th</sup> projection year, 2089. Interaction among individual provisions is reflected only in the total estimates for the combined provisions.

#### **Benefit Illustrations**

**Tables B1 and B2** provide illustrative examples of the projected change in benefit levels under the three provisions that affect benefit levels for beneficiaries retiring at age 65 in future years at five selected earnings levels, with selected numbers of years of work. The "Maximum-AIME Steady Earner" is assumed to have earnings at ages 22 through 64 that equal the present-law taxable maximum level (equivalent to \$118,500 for 2015). As a result, the provision to increase the taxable maximum does not affect benefit levels illustrated in these tables. **Table B3** provides additional important information on characteristics of the illustrative retiring workers.

Table B1 compares the initial benefit levels, assuming retirement at age 65 under the provisions of the proposal, to both scheduled and payable present-law benefit levels. All benefit amounts under the proposal are higher than those scheduled in current law, especially for the very low and low hypothetical earners with at least 30 years of earnings (due largely to the minimum benefit provision). The final two columns of this table show the level of scheduled benefits under the proposal as a percentage of present-law scheduled and present-law payable benefits, respectively.

Table B2 compares the change in scheduled benefit levels at ages 65, 75, 85, and 95 under the proposal to scheduled benefits under present law, assuming retirement at age 65. Table B2 shows that projected scheduled benefits under the provisions of this proposal increase in relation to present-law scheduled benefits between ages 65 and 95, because of the change in computing the COLA.

The hypothetical workers represented in these tables reflect average career-earnings patterns of workers who started receiving retirement benefits under the Social Security program in recent years. The tables subdivide workers with very low and low career-average earnings levels by their numbers of years of non-zero earnings.

Table B3 provides information helpful in interpreting the benefit illustrations in tables B1 and B2. Percentages in Table B3 are based on tabulations from a 10-percent sample of newly-entitled retired workers in 2007. Table B3 displays the percentages of these newly-entitled retired workers in 2007 that are closest to each of the illustrative examples and are:

- 1) "Dually Entitled", meaning they received a higher spouse or widow(er) benefit based on the career earnings of their husband or wife,
- 2) "WEP" (Windfall Elimination Provision), meaning that they received a reduced benefit due to having a pension based on earnings that were not covered under the OASDI program (primarily certain government workers), and they had less than 30 years of substantial earnings that were taxable under the OASDI program,
- 3) "Foreign Born", meaning that they entered the Social Security coverage area after birth (and generally after entering working ages), and
- 4) "All Others", meaning they had none of the three characteristics listed above.

The extent to which retired-worker beneficiaries represented by each of the illustrative examples has any of the characteristics listed above (dually entitled, WEP, foreign born) is important because such individuals are less dependent on the OASDI benefit that relates to their own career-average earnings level.

#### **Detailed Tables Containing Annual and Summary Projections**

Enclosed with this letter are **tables 1, 1a, 1b, 1b.n, 1c, and 1d,** which provide annual and summary projections for the proposal.

### **Trust Fund Operations**

**Table 1** provides projections of the financial operations of the OASDI program under the proposal and shows that the year of reserve depletion for the combined OASDI Trust Funds would be extended by 40 years, from 2034 under current law to 2074. The table shows the annual cost and income rates, annual balances, and trust fund ratios (reserves as percent of annual program cost) for OASDI, as well as the change from present law in these cost rates, income rates, and annual balances. Included at the bottom of this table are summarized rates for the 75-year (long-range) period.

The actuarial balance for the OASDI program over the 75-year projection period is improved by 2.19 percent of taxable payroll, from an actuarial deficit of 2.68 percent of payroll under current law to an actuarial deficit of 0.49 percent of taxable payroll.

Program Transfers and Trust Fund Reserves

Column 4 of **Table 1a** provides a projection of the level of reserves for the theoretical combined OASI and DI Trust Funds, assuming enactment of the five Social Security provisions of this proposal. These trust fund reserve amounts are expressed in present value dollars discounted to January 1, 2015. The table indicates that the provisions include no new specified transfers of

#### Page 9 – The Honorable Bernie Sanders

general revenue to the trust funds. For purpose of comparison, the OASDI Trust Fund reserves, expressed in present value dollars, are also shown for the current-law Social Security program both without and with the added proposal general fund transfers (zero in this case) in columns 6 and 7.

Note that negative values in columns 4, 6, and 7 represent the "unfunded obligation" for the program through the year. The unfunded obligation is the present value of the shortfall of revenue needed to pay full scheduled benefits on a timely basis from the date of trust fund reserve depletion through the end of the indicated year. Gross Domestic Product (GDP), expressed in present value dollars, is shown in column 5 for comparison with other values in the table.

#### Effect of the Social Security Provisions on the Federal Budget

**Table 1b** shows the projected effect, in present value discounted dollars, on the Federal budget (unified-budget and on-budget) cash flows and balances, assuming enactment of the five Social Security provisions of this proposal. Table **1b.n** provides the estimated nominal dollar effect of enactment of the proposal on annual budget balances for years 2015 through 2025. All values in these tables represent the amount of *change* from the level projected under current law and reflect the budget scoring convention that presumes benefits, not payable under the law after depletion of trust fund reserves, would still be paid using revenue provided from the General Fund of the Treasury obtained by additional borrowing from the public.

Column 1 of Table 1b shows the added proposal general fund transfers (zero in this case). Column 2 shows the net changes in OASDI cash flow from all provisions of the proposal.

We expect the net effect of the proposal on unified budget cash flow (column 3) to be positive in years 2017 and later, reflecting the newly applied tax on investment income in section 7 and the payroll tax newly applied to earnings above \$250,000 in sections 5 and 6.

Column 4 of Table 1b indicates that the effect of implementing the five provisions is a reduction of the Federal debt held by the public, reaching about \$9.3 trillion in present value at the end of the 75-year projection period. Column 5 provides the projected effect of the proposal on the annual unified budget balances, including both the cash flow effect in column 3 and the additional interest on the accumulated debt in column 4. Columns 6 and 7 indicate that the provisions of this proposal would have no expected direct effects on the on-budget cash flow, or on the total Federal debt, in the future.

It is important to note that we base these estimates on the intermediate assumptions of the 2015 Trustees Report and thus these estimates are not consistent with estimates made by the Office of Management and Budget or the Congressional Budget Office based on their assumptions. In particular, all present values are discounted using trust fund yield assumptions under the intermediate assumptions of the 2015 Trustees Report.

#### Annual Trust Fund Operations as a Percent of GDP

**Table 1c** provides annual cost, annual expenditures (amount that would be payable), and annual tax income for the OASDI program expressed as a percentage of GDP for both present law and assuming enactment of the five Social Security provisions of the proposal. Showing the annual trust fund cash flows as a percent of GDP provides an additional perspective on these trust fund operations in relation to the total value of goods and services produced in the United States. The relationship between income and cost is similar when expressed as a percent of GDP to that when expressed as a percent of taxable payroll (Table 1).

#### Effects on Trust Fund Reserves and Unfunded Obligations

**Table 1d** provides estimates of the changes in trust fund reserves. Values in this table are expressed in present value dollars discounted to January 1, 2015.

For the 75-year (long-range) period as a whole, the present-law unfunded obligation of \$10.7 trillion is reduced to \$1.4 trillion in present value. This change of \$9.3 trillion results from:

- A \$13.0 trillion increase in revenue (column 2), primarily from additional tax revenue, *minus*
- A \$3.7 trillion increase in cost (column 3), primarily from the special minimum PIA provision, calculating the COLA using the CPI-E rather than the CPI-W, and increasing current and future benefits by increasing the first PIA bend point by 15 percent ultimately.

We hope these estimates are helpful. Please let me know if we may provide further assistance.

Sincerely,

Stepher C. Dose

Stephen C. Goss Chief Actuary

Enclosures

	.,=	,					100	

Average of highest 35 years of earnings wage indexed to 2015.

<sup>2</sup> Projected percent of new retired worker awards in 2050 closest to AIME levels and years of work.

After the trust fund reserves deplete under present law continuing taxes are expected to be enough to pay about three fourths of scheduled benefits.

<sup>4</sup> Starting Dec 2016, compute the COLA using a chained CPI-E, producing 0.2% higher annual COLAs on average.

<sup>i</sup> Increase the current-law first PIA bend point by 1% for 2021, 2% for 2022, ..., and 15% for 2035 and later.

<sup>5</sup> For beneficiaries newly eligible in 2017, establish a minimum PIA level such that a worker with 30/10 years of coverage would receive an initial PIA of at least 125%/0% of the monthly poverty level for 2016. For beneficiaries newly eligible after 2017, the initial minimum PIA level would be adjusted for average wage growth. The Minimum Benefit Percent change is calculated after all other provisions, so that the Proposed Benefit Amount is at least the Minimum Benefit, where applicable.

All estimates based on the intermediate assumptions of the 2015 Trustees Report.

Steady Earner (9.4% of Retirees)	0	0	7	93						

Note 1:Table B3 displays the percentages of these newly-entitled retired workers in 2007 that are closest to each of the illustrative examples.

Note 2: Percents based on tabulations of a 10-percent sample of newly entitled retired-worker beneficiaries in 2007 (169,725 records). We can be 95 percent confident that each of the values shown above is within 1.4 percentage points of the value we would find using 100 percent of the retirees in 2007.

Note 3: The sum of the percentages for each category (sum across rows) could be greater than 100 percent because some beneficiaries can be classified in more than one of the following groups: dually entitled, WEP, and foreign born.

<sup>1</sup> Average of highest 35 years of earnings wage indexed to 2015.

<sup>2</sup> Under current law, entitled to an additional benefit based on someone else's account. The dually entitled percent is a minimum value. Some beneficiaries that are not currently dually entitled could become dually entitled in the future.

<sup>3</sup> Covered by pension from government employment and are subject to the windfall elimination provision (WEP).

<sup>4</sup> Neither foreign born, subject to WEP, or dually entitled.

Total 2015-2089

Based on the Intermediate Assumptions of the 2015 Trustees Report. Ultimate Real Trust Fund Yield of 2.9%.

<sup>1</sup> Theoretical Social Security is the current Social Security program with the assumption that the law is modified to permit borrowing from the General Fund of the Treasury.

0.0

Based on Intermediate Assumptions of the 2015 Trustees Report. Ultimate Real Trust Fund Yield of 2.9%.

Note: Changes reflect the budget scoring convention that presumes benefits not payable after reserve depletion would

nonetheless be paid, based on transfers from the General Fund of the Treasury resulting in additional borrowing from the public. <sup>1</sup> Effects of tax provisions on the On-Budget are not reflected in this table.

Table 1b.n - OASDI Changes & Implications for Federal Budget and Debt of Specified Plan Provision Effects on OASDI<sup>1</sup> (Nominal Dollars) *S.731, "The Social Security Expansion Act",* introduced by Senator Sanders

Based on Intermediate Assumptions of the 2015 Trustees Report.

Note: Changes reflect the budget scoring convention that presumes benefits not payable after reserve depletion would

nonetheless be paid, based on transfers from the General Fund of the Treasury resulting in additional borrowing from the public. <sup>1</sup> Effects of tax provisions on the On-Budget are not reflected in this table.

Table 1c - Present Law and Proposal Cost, Expenditures, and Income: As Percent of Gross Domestic Product
