

## Social Security Administration Analytics Center of Excellence

Advanced Analytics Capability Maturity Model (A<sup>2</sup>CM<sup>2</sup>)

February 6, 2020

## OMB Guidance on Data Maturity

- OMB stipulates Data Maturity Assessments allow an organization to:
  - evaluate itself against documented best practices,
  - · determine gaps, and
  - identify areas to prioritize for improvement.
- OMB requires Data Maturity Assessments to analyze agency policies, procedures, and operations related to data and data infrastructure, including
  - data governance, data management,
  - data culture, data systems and tools,
  - · data analytics, staff skills and capacity,
  - · resource capacity, and
  - compliance with law and policy.
- And that the results of a maturity assessment feed into the data governance and management processes to
  - inform investment decisions and
  - to prioritize subsequent actions.

## Data Maturity & Infrastructure: Selecting the tool

- The data maturity selection should be based on the current state of data management activities. It is recommended that agencies select a model that allows for the expansion of successful organizational practices.
- Available resources may help decide between conducting a self-assessment or hiring an independent assessor.
- Organizations may need to decide between a free, commercial or customized model
  - Examples:
    - Free: Federal Data Maturity Model
    - Commercial: Data Management Maturity (CMMI) and DAMA

We reviewed analytics maturity models to determine which attributes should be included in an SSA model and developed a unique model for SSA

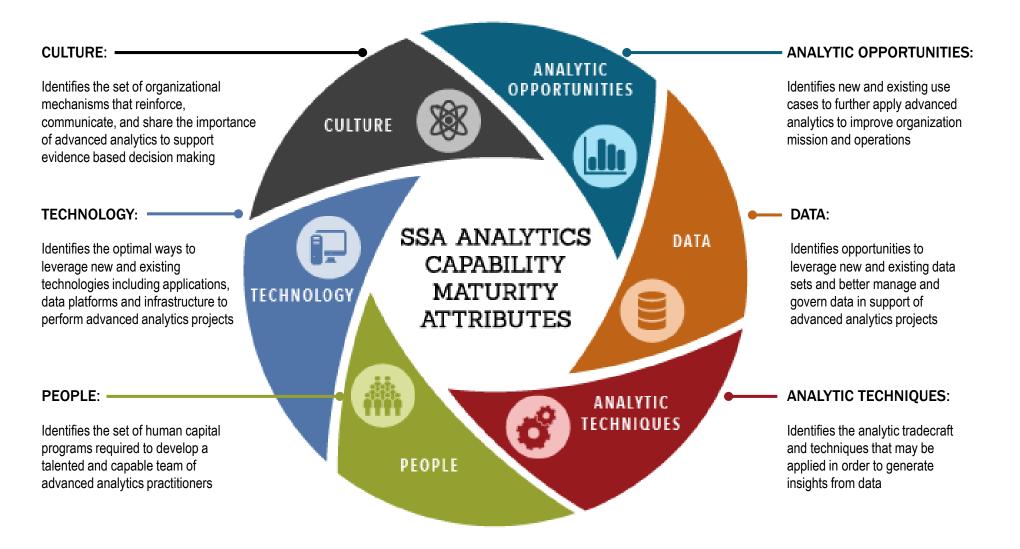

| Analytic | s Capability Maturity Models   | People       | Process      | Technology   | Data         | Analytics    | Culture      |
|----------|--|--------------|--------------|--------------|--------------|--------------|--------------|
|          | Carnegie Mellon University Institute Data<br>Management Maturity Model (DMM) |              | $\checkmark$ | $\checkmark$ | $\checkmark$ |              |              |
|          | Federal Enterprise Architecture – Data Reference<br>Model (FEA-DRM)          |              | $\checkmark$ | $\checkmark$ | $\checkmark$ |              |              |
|          | Cross Industry Standard for Data Mining (CRISP-<br>DM)                       |              | $\checkmark$ | $\checkmark$ | $\checkmark$ | $\checkmark$ |              |
|          | Gartner Business Intelligence Model  | $\checkmark$ | $\checkmark$ |              |              |              | $\checkmark$ |

Because none of the maturity models reviewed address all critical areas of capability development, ACE developed a maturity model specifically for SSA

## **SSA Analytics Capability Maturity Attributes**

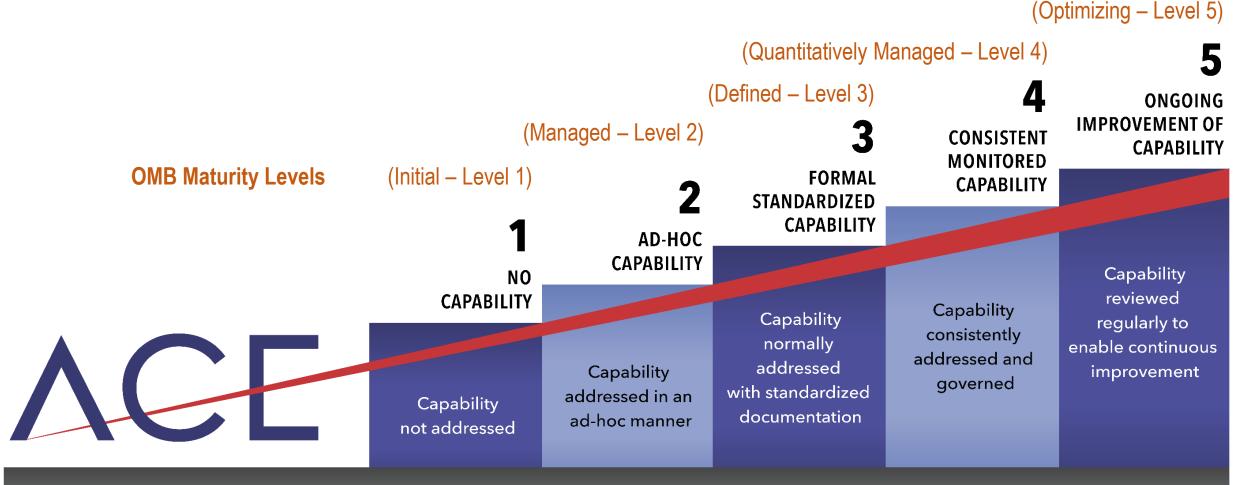

## ADVANCED ANALYTICS CAPABILITY MATURITY MODEL (A<sup>2</sup>CM<sup>2</sup>)

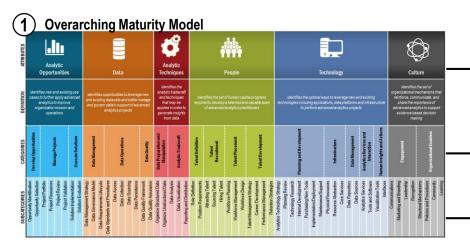

Each attribute and subcategory has five evidence-based levels of maturityranging from no capability to continuous improvement

**SSA ADVANCED ANALYTICS CAPABILITY MATURITY SCALE** 

# The A<sup>2</sup>CM<sup>2</sup> has four key parts – attributes, categories, subcategories, and levels of maturity

#### How to use the Model

Attributes with definitions – the six main categories that must be covered to build an analytics capability with definitions in the row below that describe what each of these attributes includes and why they are important

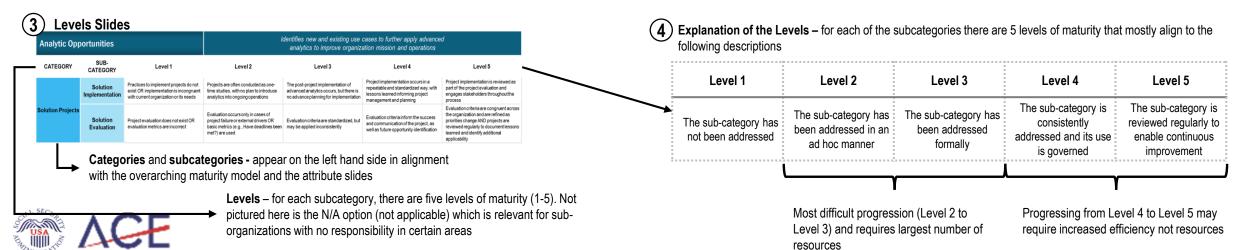

**Categories** – these are the areas in which the organization's maturity is assessed and explained, typically including 2-6 sub-categories

 Sub-Categories – the smallest of elements, each
 of these subcategories represents an area in which the organization should seek maturity

| ) Att           | ribute Slides   |                            | DRAF   |  |  |  |  |
|-----------------|---|----------------------------|--|--|--|--|--|
|                 | Analytic Opportunities  |                            | Identifies new and existing use cases to further apply advanced<br>analytics to improve organization mission and operations  |  |  |  |  |
| CATEGORY        | DEFINITION  | SUBCATEGORY                | DEFINITION   |  |  |  |  |
| Develop         | The identification and selection of<br>advanced analytic opportunities, which<br>will result in business process        | Opportunity Identification | The process by which an organization solicits cases for advanced analytics, first by evaluating critical success factors, and then by<br>identifying projects which can address any gaps in the organization's performance   |  |  |  |  |
| Opportunities   | improvements, system enhancement<br>proposals, policy modifications, and/or<br>operational effectiveness and efficiency | Opportunity Selection      | The mechanisms for reviewing and choosing advanced analytics projects, to include the process to develop and refine criteria for<br>advancement, the process to narrow opportunities to pursue as projects, and the metrics to evaluate the likely return on investment                      |  |  |  |  |
|                 | The approach used to review, govern,<br>oversee, and authenticate advanced  | Project Portfolio          | The approach by which the range and collection of proposed, on-going, and future projects is reviewed holistically to determine<br>relevance (to the organization's goals), relatedness (to other advanced analytics projects), and impact (to the organization's<br>capabilities and needs) |  |  |  |  |
| Manage Projects |   | Project Resources          | The process (business case) by which an organization invests time, money and people in advanced analytics projects, the evaluati<br>of business benefits, and the allocation of time, money and people as needed for the portfolio of projects   |  |  |  |  |
|                 | analytics projects in alignment with the<br>organization's goals and objectives   | Project Review             | The project management and oversight of advanced analytics projects including, initiating, planning, executing, controlling and<br>closing of analytics projects to achieve specific goals and meet specific success criteria monitored through the duration of the proje                    |  |  |  |  |
|                 |   | <b>Project Validation</b>  | The technique to test the multiple stages of an ongoing project by introducing controls to inform project measurement (output and<br>outcome) and progress (against schedu/e and desired results)  |  |  |  |  |
| Execute         | The methods by which completed  | Solution Implementation    | The production and integration of analytics project results into business operations (including identification of completion (e.g.,<br>analytics are ready for deployment), development of a plan, transfer of ownership, and training of end users)   |  |  |  |  |
| Solutions       | projects are measured, implemented<br>and examined over time  | Solution<br>Evaluation     | The processes to review completed projects against success oriteria, document lessons learned, consider opportunities for analytic<br>enhancements, and discuss additional applicability to create scalable advanced analytics   |  |  |  |  |

Categories with definitions – The same categories that appeared on the overarching maturity model reappear on the attribute slides with their specific definitions

**Sub-categories with definitions** – Just like the categories, these subcategories all appeared on the overarching maturity model, but here they are presented with their definitions

## Enterprise Responsibility within A<sup>2</sup>CM<sup>2</sup>

- Most maturity levels can be achieved by a component individually, but there some levels which must be handled by the enterprise/agency as a whole
- Following this logic, certain maturity levels within the A<sup>2</sup>CM<sup>2</sup> were designated as "enterprise" levels, meaning that components were not responsible, nor able to achieve those levels of maturity
- Enterprise levels are indicated on the scorecard with gray shading

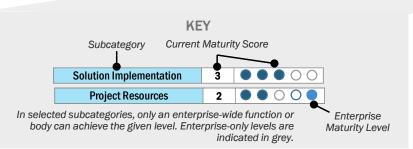

|                           | CATEGORY                  | SUBCATEGORY                   | CUR. |   |

Maturity Level

Solution Implementation
Project Resources
In selected subcategories, only an enterp

body can achieve the given level. Enterprise-only levels are

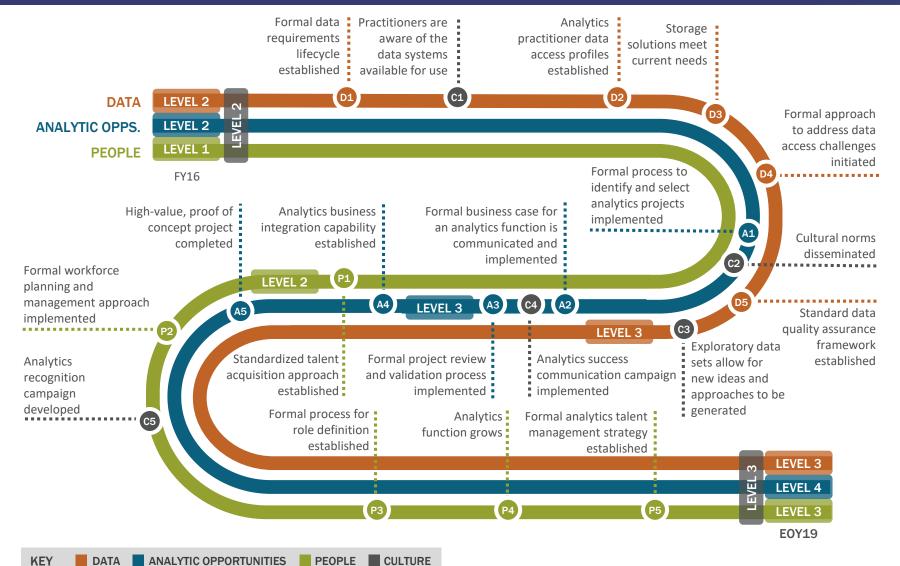

- For quick high-level assessments the attribute-level scoring guide, summarized from the A2CM2, can be used to take a rapid point in time snapshot of the agency or a component
  - For quick high-level assessments Survey Tool
- For repeated measurement the self-assessment tool, a macro-enabled Excel tool, allows components to interact with the A<sup>2</sup>CM<sup>2</sup> and score themselves, by clicking through our guided model (built right into Excel).

### **Sample Advanced Analytics Roadmap**

|  | Analytic Opportunities   |                            | Identifies new and existing use cases to further apply advanced analytics to improve organization mission and operations   |   |
|--|--|----------------------------|--|---|
| CATEGORY   | DEFINITION   | SUBCATEGORY                | DEFINITION   |   |
| Develop  | The identification and selection of<br>advanced analytic opportunities, which<br>will result in business process                 | Opportunity Identification | The process by which an organization solicits cases for advanced analytics, first by evaluating critical success factors, and then by identifying projects which can address any gaps in the organization's performance  |   |
| Opportunities                                      | improvements, system enhancement<br>proposals, policy modifications, or<br>increased operational effectiveness and<br>efficiency | Opportunity Selection      | The mechanisms for reviewing and choosing advanced analytics projects, to include the process to develop and refine criteria for advancement, the process to narrow opportunities to pursue as projects, and the metrics to evaluate the likely return on investment                         |   |
| Manage Projects oversee, and authenticate advanced |  | Project Portfolio          | The approach by which the range and collection of proposed, on-going, and future projects is reviewed holistically to determine relevance (to the organization's goals), relatedness (to other advanced analytics projects), impact (to the organization's capabilities and needs), and risk |   |
|  | analytics projects in alignment with the   | •••                        | Project Resources  | The process (business case) by which an organization invests time, money and people in advanced analytics projects, the evaluation of business benefits, and the allocation of time, money and people as needed for the portfolio of projects |
|  |  | Project Review             | The project management and oversight of advanced analytics projects including initiating, planning, executing, controlling, and closing of analytics projects to achieve specific goals and meet specific success criteria monitored through the duration of the project                     |   |
|  |  | Project Validation         | The process by which to validate the multiple stages of an ongoing advanced analytics project. Validation may include internal and external validity checks, sample analysis, and review of model assumptions. Project validation may be similar to an academic peer-review process.         |   |
| Execute<br>Solutions                               | The methods by which solutions are measured, implemented and examined over time  | Solution Implementation    | The processes for the production and integration of analytics solutions into business operations. Processes may include planning, transfer of ownership, and training of end users.  |   |
|  |  | Solution<br>Evaluation     | The processes to review solutions against success criteria, document lessons learned, consider opportunities for analytic enhancements, and discuss additional applicability to create scalable advanced analytics   |   |

#### Analytic Opportunities

Identifies new and existing use cases to further apply advanced analytics to improve organization mission and operations

| CATEGORY                 | SUB-<br>CATEGORY              | Level 1  | Level 2  | Level 3  | Level 4  | Level 5   |
|--------------------------|-------------------------------|--|--|--|--|---|
| Develop<br>Opportunities | Opportunity<br>Identification | A process to solicit or recognize potential advanced analytics opportunities does not exist  | Leaders solicit or initiate discussion of opportunities on a periodic basis, often due to external drivers   | A process for both leaders and staff to review potential opportunities that occurs on a regular basis  | Opportunities to improve the advanced<br>analytics of the organization are solicited<br>and recognized in a standard and<br>repeatable process   | Process to solicit and recognize<br>opportunities is reviewed for internal<br>consistency, external impact, efficiency,<br>and quality of opportunities identified  |
|                          | Opportunity<br>Selection      | Selection criteria do not exist  | Selection criteria are developed in<br>conjunction with opportunity OR<br>selection criteria result in poor<br>opportunity selection   | Established selection criteria exist, but are applied inconsistently   | Selection criteria are applied consistently<br>and result in superior opportunity<br>selection AND selection criteria are<br>standardized  | Selection criteria are reviewed and<br>refined following project close out, in<br>conjunction with identification, and are<br>shared and replicated across the<br>organization  |
| Manage Projects          | Project Portfolio             | Past, current, and future projects are<br>managed, viewed, or resourced on an<br>individual basis (no holistic approach to<br>advanced analytics projects) | Simultaneous advanced analytics<br>projects are managed and resourced<br>due to time or resource constraints OR<br>multiple project connections (results) are<br>communicated <i>ex post facto</i> | Opportunity development, project<br>evaluation, experiences from past<br>projects, and identified needs inform the<br>collective view and execution of<br>analytics projects AND are integrated as<br>part of selection and evaluation | The portfolio of projects is managed and resourced as a holistic function enterprise-wide, with established processes and oversight  | Advanced analytics projects portfolio<br>includes a robust pipeline of<br>opportunities, no overlap in projects, and<br>efficiencies to ensure economies of<br>scale, all of which are regularly reviewed<br>and refined as needed            |
|                          | Project<br>Resources          | Approaches for the management and<br>tracking of resources (e.g., people,<br>funding, technology) for advanced<br>analytics projects do not exist          | For each opportunity, the process to<br>manage resources is conducted<br>differently OR management of resources<br>is incongruent with current and future<br>needs                                 | Resources are identified and made<br>available for analytics projects in a<br>standard process, which utilizes a<br>business case  | Resource information is standardized<br>and tracked enterprise-wide AND<br>resource management may inform<br>opportunity selection, portfolio<br>management, and evaluation  | A centralized resource management hub<br>proactively manages and deploys project<br>resources to gain efficiencies and<br>optimize resource alignment to<br>opportunities   |
|                          | Project Review                | Methods to review advanced analytics projects do not exist   | Project review occurs only in case of<br>failure or external drivers OR when<br>project review occurs, inconsistent<br>metrics are used  | Policies, procedures, and metrics exist to review projects in a regular and repeatable way   | Project review criteria are well defined,<br>communicated, and enforced as part of a<br>formal step in the project lifecycle   | Project review occurs continuously<br>throughout the process, with ongoing<br>monitoring of success metrics to enable<br>improvement  |
|                          | Project<br>Validation         | Processes to test and to validate analytics projects do not exist  | Project validation is introduced in only<br>high-risk projects OR review is<br>introduced at the wrong times OR the<br>review is not thorough OR are applied<br>inconsistently                     | Repeatable processes for project validation are part of the advanced analytics project lifecycle.  | Standardized tests and controls are<br>introduced consistently as part of the<br>advanced analytics project lifecycle, and<br>the results of the validation step are part<br>of the governance process for analytics<br>review | Advanced analytics project validation is<br>part of the formal advanced analytics<br>project lifecycle, validation improvement<br>is continuously reviewed, processes<br>updated, and results incorporated back<br>into the project lifecycle |

| Analytic Opportunities |                            |  | Identifies new and existing use cases to further apply advanced analytics<br>to improve organization mission and operations                 |  |  |  |
|------------------------|----------------------------|--|---|--|--|--|
| CATEGORY               | SUB-<br>CATEGORY           | Level 1  | Level 2   | Level 3  | Level 4  | Level 5  |
|                        | Solution<br>Implementation | Practices to implement solutions do not exist                                  | Solution implementation is not<br>considered prior to analytics project<br>design, and must be retroactively fit into<br>ongoing operations | The post-solution implementation of<br>advanced analytics occurs, but there is<br>no formal advance planning for<br>implementation | Solution implementation occurs in a repeatable and standardized way, with lessons learned informing solution management and planning | Solution implementation is reviewed as<br>part of the solution evaluation and<br>engages stakeholders throughout the<br>process  |
| Execute<br>Solutions   | Solution<br>Evaluation     | Methods to evaluate solutions do not exist OR evaluation metrics are incorrect | Evaluation occurs only in cases of<br>solution failure or external drivers OR<br>basic metrics (e.g., Have deadlines been<br>met?) are used | Evaluation criteria are standardized, but may be applied inconsistently  | Evaluation criteria inform the success<br>and communication of the solution, as<br>well as future opportunity identification         | Evaluation criteria are congruent across<br>the organization and are refined as<br>priorities change AND solutions are<br>reviewed regularly to document lessons<br>learned and identify additional<br>applicability |

| Data               |  | Identifies opportunities to leverage new and existing data sets and better manage<br>and govern data in support of advanced analytics projects  |  |  |  |
|--------------------|--|---|--|--|--|
| CATEGORY           | DEFINITION   | SUBCATEGORY   | DEFINITION   |  |  |
|                    | The establishment and supervision of how data is managed, organized, and                 | Data Management Strategy  | The goals, objectives, and regular processes for prioritizing data management across the organization  |  |  |
| Data<br>Management | governed in the organization; including goals, oversight structures and                  | Data Governance Model   | The framework and processes used to maintain, control, monitor and protect the use of data by individuals and applications   |  |  |
|                    | formalized processes to support ongoing data management                                  |   | The processes of identifying, analyzing and verifying the business and operational requirements for data including how the logical and physical architectural components are implemented   |  |  |
|                    |  |   | The existing policies, requirements and structure for all aspects of data operations including data flow, data duration, data metrics, business ontologies, and change management  |  |  |
|                    | The administration of data related business practices (harvesting,                       | Data Access   | The processes and policies for requesting, granting, and monitoring access to data from primary and secondary information systems  |  |  |
| Data Operations    | acquiring, storing and transforming data) in order to ensure the highest level of        |   | The methods by which data is accessed, captured, harvested, loaded, and formatted to support advanced analytics activities in alignment with privacy and security controls   |  |  |
|                    | efficiency within the organization (correct format, location, accessibility, etc.)       |   | The processes for acquiring data from external partners, managing agreements, and interacting with suppliers. This may include sourcing requirements, procurement, and provider management   |  |  |
|                    |  | Data Persistence  | The methods by which data is aggregated, persisted, matched, formatted, and stored to support advanced analytics activities  |  |  |
| Data Quality       | The processes, criteria, and approaches<br>used to ensure the delivery of consistent,    | $11212 (1112) 111 \neq r_2 = r_2$ | The formal structures and processes used to ensure and measure the delivery of consistent, accurate, complete, and timely data to users across the organization  |  |  |
| Data Quality       | accurate, complete, and timely data to<br>end user applications across the<br>enterprise |   | The regular systematic processes of determining whether data meets specified requirements of quality to support underlying business needs involving a combination of methodologies, processes, and business rules to measure and analyze quality |  |  |

and govern data in support of advanced analytics projects

| CATEGORY           | SUB-<br>CATEGORY                    | Level 1 Level 2  |  | Level 3   | Level 4   | Level 5  |
|--------------------|-------------------------------------|--|--|---|---|--|
|                    | Data<br>Management<br>Strategy      | A data management strategy does not exist  | Data management strategy may be<br>defined for some of the organization or<br>has been developed for small advanced<br>analytics projects  | A formal data management strategy exists for the entire organization  | A data management strategy exists and<br>is developed in alignment with stated<br>business objectives   | A data management strategy is<br>maintained AND implementation is<br>continuously reviewed to identify<br>opportunities for improvement  |
| Data<br>Management | Data<br>Governance<br>Model         | Structures to govern data management practices do not exist  | A structure for the governance of data<br>management practices exists, but<br>roles are not defined, processes are<br>ad hoc, and metrics are inconsistent                           | A formal data governance model<br>exists, including structures, roles,<br>processes, mechanisms, and metrics  | A data governance model exists, is<br>compliant with regulations, and is<br>monitored/enforced by an enterprise-<br>wide body                             | An enterprise-wide data governance<br>model is continuously adjusted based<br>on strategy, regulatory requirements,<br>and performance metrics   |
|                    | Data<br>Requirements<br>Lifecycle   | Processes for data requirements collection do not exist  | Data requirements are collected to meet<br>immediate needs OR data requirements<br>collection is inconsistent  | Formal processes for data requirements<br>collection exists OR data requirements<br>are collected proactively   | Standardized process for data<br>requirements collection exists AND<br>requirements are developed as part of<br>future planning                           | Data requirements lifecycle is reviewed<br>regularly and refined as needed to plan<br>for data requirements over a multi-year<br>timeframe   |
|                    | Data<br>Standards and<br>Procedures | Data is compliant with formal policy (e.g., privacy, security) but definitions and rules related to the use of data do not exist | Data may be defined in a data dictionary<br>and model, but the rules related to the<br>use of data do not exist OR are not<br>applied in compliance with formal policy               | Data format is standardized AND the<br>organization has formal processes or<br>standards for data updates, data<br>description, and data exchange formats   | A comprehensive set of data standards is<br>enforced across the enterprise, including<br>format and exchange standards                                    | Data standards create ease of data<br>exchange (with common definitions) AND<br>are reviewed regularly to identify<br>opportunities for enhancement  |
|                    | Data Access                         | Data access is highly restricted AND there are no clear data access processes  | Data access is granted ad hoc across the organization OR data access processes or polices are inconsistently applied   | Data access includes a formal request<br>process and access is governed by a<br>comprehensive organization-wide data<br>access policy   | Data access is broadly defined across the enterprise and monitored for security concerns  | Data access is reviewed regularly to<br>ensure that data is as accessible as<br>possible while securing critical<br>information  |
| Data<br>Operations | Data Collection                     | Data collection is not performed in<br>consideration of advanced analytics<br>needs  | Data collection for advanced analytics is<br>performed due to project failure or<br>external driver AND processes for<br>collecting data exist but are ad hoc                        | Formal processes to access and capture<br>data exist and data collection are<br>proactively managed and planned for in<br>compliance with privacy and security<br>concerns                          | Data collection is governed and managed<br>AND data requirements are considered<br>as part of the collection planning process                             | Data collection is conducted in alignment<br>with the data management strategy in<br>advance of business needs and<br>supported by automated processes (e.g.,<br>ETL), which are continuously improved |
|                    | Data Sourcing                       | Processes for sourcing data do not exist   | Data is sourced/harvested to meet<br>immediate needs (reporting, external<br>requests, etc.) AND there is no consistent<br>process for developing service-level<br>agreements (SLAs) | Data sources are reviewed regularly and<br>proactively AND there is a standard<br>process for developing SLAs   | Data sourcing/harvesting is integrated<br>into future planning of business needs<br>AND data sourcing providers are actively<br>managed to ensure quality | Continuous identification and evaluation<br>of current and potential data sources to<br>improve advanced analytics in support of<br>business needs   |
|                    | Data<br>Persistence                 | Data persistence processes do not consider advanced analytics needs  | Data storage format in systems reflects<br>short-term needs such as reporting<br>requirements or external requests OR<br>data formatting is done manually and<br>inconsistently      | Format in which data is stored is<br>designed to meet ongoing business<br>needs and proactively plan for future<br>requirements AND data munging is done<br>in preparation for analytics activities | Data is stored in a format to meet the<br>broadest advanced analytics needs, often<br>prior to the articulation of specific needs                         | Data is formatted and stored in systems<br>to meet the broadest advanced analytics<br>needs AND the organization continuously<br>evaluates processes to better support its<br>advanced analytics needs |
| MINISTRATE         |                                     |  |  |   |   | 16   |

Identifies opportunities to leverage new and existing data sets and better manage and govern data in support of advanced analytics projects

| CATEGORY     | SUB-<br>CATEGORY          | Level 1  | Level 2   | Level 3   | Level 4  | Level 5   |
|--------------|---------------------------|--|---|---|--|---|
|              | Data Quality<br>Framework | There is no process to assess data quality             | The data quality assessment process<br>occurs inconsistently OR irregularly<br>throughout the data lifecycle OR the<br>criteria for data quality are inconsistent                                       | There is a regular and standardized data<br>quality assessment process with<br>formalized data quality criteria | consistent, and is governed  | There is a continuous process with<br>standardized criteria for assessing data<br>quality that is refined and improved<br>regularly   |
| Data Quality | Data Quality<br>Assurance | There is no process for addressing data quality issues | After being identified, data quality issues<br>are considered on an ad hoc basis AND<br>action is only taken when required or due<br>to an external driver OR inspection is<br>performed inconsistently | Data quality issues are considered AND  | Data quality issues are considered<br>regularly to ensure data is suitable for the<br>intended purpose OR ongoing data<br>quality is assured by consistently<br>eliminating mistakes | Data quality issues are continuously<br>considered in alignment with the goal to<br>ensure that data is suitable for the<br>intended purpose AND data quality is<br>assured by reviewing pre-production data<br>to ensure it is fit for purpose and right the<br>first time |

| 68                     | Analytic Techniques  | Identifies the analytic tradecraft and techniques<br>that may be applied in order to generate insights from data |   |  |
|------------------------|--|--|---|--|
| CATEGORY               | DEFINITION   | SUBCATEGORY  | DEFINITION  |  |
| Data Preparation       | The organizing of structured and<br>unstructured data to support the<br>analytical model, and evaluation of those        | Organize Structured Data   | The processing of structured data to support advanced analytics activities, including searching, selecting, building attributes, associating, characterizing, classifying, predicting, clustering, explaining, and discovering patterns of data   |  |
| and<br>Manipulation    | support capabilities relative to analytical<br>and operational requirements  | Organize Unstructured Data   | The processing of unstructured data to support advanced analytics activities, including searching, selecting, building attributes, associating, characterizing, classifying, predicting, clustering, explaining, and discovering patterns of data |  |
|                        |  | Data Analysis  | The process of examining unstructured or structured data to describe, discover, explain, predict, and advise. Methods include outlier analysis, categorizing, clustering, extracting, summarizing, and modeling with data                         |  |
| Analytic<br>Tradecraft | The analytic, visualization, and reporting techniques of the organization in support of data-driven decisions or actions |  | The methods and techniques used to represent data or information as visual objects contained in graphics in order to communicate information more clearly and effectively to different data consumers or audiences                                |  |
|                        |  | Reporting and Distribution   | The methods by which analytic reports are created, published, and distributed within and external to the organization, e.g., dashboards, static reports, on-demand reporting, ad hoc reports, and other required reports                          |  |

Analytic Techniques

## Identifies the analytic tradecraft and techniques that may be applied in order to generate insights from data

| CATEGORY                                | SUB-<br>CATEGORY                 | Level 1 Level 2  |   | Level 3  | Level 4   | Level 5  |
|---|----------------------------------|--|---|--|---|--|
| Data Preparation<br>and<br>Manipulation | Organize<br>Structured Data      | Ability to analyze structured data does not exist  | Analytic techniques are available to<br>characterize structured data in support of<br>basic descriptive analyses OR advanced<br>analytic techniques are limited to search | Analytic techniques are available to<br>support the development of attributes for<br>exploratory analysis AND additional<br>techniques are considered only to meet<br>reporting needs  | Analytic techniques are available to<br>support pattern discovery of multiple<br>structured data fields for on demand<br>application or downstream analyses AND<br>additional techniques are considered<br>regularly in preparation for business<br>needs | Analytic techniques are available to<br>support the broad spectrum of analytics<br>needs AND additional techniques are<br>continuously considered to support the<br>organization's advanced analytics<br>capability over a multi-year time frame                                 |
|   | Organize<br>Unstructured<br>Data | Ability to analyze unstructured data does not exist  | Analytic techniques are available to<br>support limited categorization of<br>unstructured data OR techniques are<br>limited to search                                     | Analytic techniques are available to<br>categorize unstructured data to support a<br>variety of applications across multiple<br>domains AND additional techniques are<br>considered only to meet immediate needs   | Analytic techniques are available to<br>support downstream analyses (e.g., entity<br>tagging/extraction) and summarization<br>AND additional techniques are<br>considered regularly in preparation for<br>business needs                                  | Analytic techniques for unstructured data<br>are linked to a taxonomy to enhance<br>discoverability AND additional techniques<br>are continuously considered to support<br>the organization's advanced analytics<br>capability over a multi-year time frame                      |
| Analytic<br>Tradecraft                  | Data Analysis                    | Ability to analyze data beyond basic<br>mathematic functions (e.g., sum,<br>percentage) does not exist | Data analysis methods include<br>descriptive analytics, basic methods of<br>discovery, and unsophisticated<br>explanatory analytics                                       | Data analysis methods include discovery<br>analytics AND may include predictive<br>models for structured data (e.g., LDA and<br>Bayesian models) OR advanced<br>statistical methods for explanatory<br>analytics are used (e.g., instrumental<br>variables and differences-in-differences) | Data analysis methods include predictive<br>analytics AND likely include predictive<br>models for unstructured data (e.g., elastic<br>search and natural language processing)   | Data analysis methods include<br>prescriptive analytics, use machine<br>learning to develop and train predictive<br>analytic models AND are consistently<br>reviewed for additional capability   |
|   | Data<br>Visualization            | Visualization techniques do not exist OR are limited and must be reproduced with each iteration        | Visualization techniques exist but are<br>subjectively chosen based on user<br>discretion, without consideration for end-<br>user experience                              | There are multiple automated<br>visualization techniques AND guidance<br>for how to visualize for the end user AND<br>additional techniques are considered only<br>to meet immediate needs   | Best practice visualization techniques are<br>recorded in organizational documents<br>and automated in systems AND<br>additional techniques are considered<br>regularly in preparation for business<br>needs  | Visualization techniques are<br>comprehensive (technologically and<br>visually) and guidance is provided on<br>their use AND additional techniques are<br>continuously considered to support the<br>organization's advanced analytics<br>capability over a multi-year time frame |
|   | Reporting and<br>Distribution    | Reporting and distribution methods do not exist OR are done inconsistently                             | Analytic reports are created manually in response to requests AND distribution lists are ad hoc   | Analytic reports are automatically<br>produced in a standardized method to<br>ensure consistency across the<br>organization AND reports are easily<br>customized and tailored for different<br>distribution lists  | Customized, automatic analytic reports<br>are prepared regularly to meet specific<br>business needs for different audiences   | Analytic reports are dynamic, access is<br>granted to specified distribution groups,<br>information is customized to meet the<br>audience and there is a continuous<br>review focused on improving efficiency<br>and effectiveness in the process                                |

|                       | People  |                            | Identifies the set of human capital programs required to develop<br>a talented and capable team of advanced analytics practitioners  |  |  |
|-----------------------|---|----------------------------|--|--|--|
| CATEGORY              | DEFINITION  | SUBCATEGORY                | DEFINITION   |  |  |
|                       | The identification of required advanced analytics skills, work activities, and  | Role Definition            | The formalized procedures in place to identify the essential tasks, knowledge, skills, and abilities required of advanced analytics positions within the organization  |  |  |
| Talent Definition     | position requirements in order to provide<br>the most value to the organization   | Position Requirements      | The process of defining the work duties and position qualifications required for advanced analytics roles within the organization and aligning those positions to strategic business objectives  |  |  |
|                       | The processes used to acquire and hire high-quality advanced analytics talent by  | Attracting Talent          | The attraction of high-quality advanced analytics talent by marketing to and engaging those prospective candidates in the recruitment process  |  |  |
| Talent<br>Recruitment | recruiting effectively, improving the<br>external image of advanced analytics for<br>the organization, and building<br>relationships with critical partners to<br>attract advanced analytics talent | Sourcing Talent            | The process by which the ideal characteristics of advanced analytics candidates are determined and recruitment sources (e.g., social media, professional organizations, educational institutions) are prioritized in order to identify, assess, and engage potential advanced analytics candidates |  |  |
|                       |   | Hiring Talent              | The processes used to move advanced analytics candidates through the hiring process and make informed hiring decisions   |  |  |
|                       | The placement of appropriate advanced<br>analytics talent to support long-term<br>business goals and mitigate workforce<br>risks  | Workforce Planning         | The processes used to determine the advanced analytics staffing requirements (e.g., composition, size, position design) of the organization  |  |  |
| Talent Placement      |   | Workforce Management       | The processes used to identify and track where the advanced analytics workforce positions and people reside within the organization and outline succession plans for mission-critical advanced analytics positions   |  |  |
|                       |   | Workforce Design           | The approach used to organize the workforce into a cohesive and collaborative organization, designed to improve the overall advanced analytics capability  |  |  |
|                       |   | Talent Management Strategy | The goals, objectives, and regular processes for annually prioritizing talent management and human capital efforts in support of a broad advanced analytics capability   |  |  |
| Talent<br>Development | The targeted programs and plans designed to motivate, shape, and grow   | Career Development         | The professional learning opportunities (e.g., instructor-led, web-based, rotational assignments, shadowing) offered within the organization to build the advanced analytics skills and capabilities of the existing workforce   |  |  |
|                       | the advanced analytics workforce of the future  | Performance Management     | The continuous process by which employees and managers/supervisors work together to plan, monitor, review, and provide ongoing feedback on individual and team performance in support of the organization's advanced analytics goals   |  |  |
|                       |   | Retention Strategies       | The strategies in place targeted toward identifying motivational drivers (e.g., compensation, growth opportunities, rewards) used to engage and retain the advanced analytics workforce  |  |  |

People

Identifies the set of human capital programs required to develop a talented and capable team of advanced analytics practitioners

| CATEGORY              | SUB-<br>CATEGORY         | Level 1 Level 2   |  | Level 3  | Level 4   | Level 5   |
|-----------------------|--------------------------|---|--|--|---|---|
| Talent<br>Definition  | Role Definition          | No action has been taken to identify the tasks, knowledge skills and abilities for advanced analytics positions   | Some informal identification of the tasks,<br>knowledge, skills, and abilities for<br>advanced analytics roles occurs, but on<br>an ad hoc basis                                   | Tasks, knowledge, skills, and abilities for<br>advanced analytics roles have been<br>defined by previous job analyses and<br>have been applied at the organization<br>(i.e. applying OPM's standard job<br>analyses) | Formal identification of the tasks,<br>knowledge, skills, and abilities for<br>advanced analytics roles exists, and<br>they are standardized and customized<br>across the enterprise                            | A formal job analysis or competency<br>model has been developed for the<br>enterprise itself, is reviewed regularly<br>and refined as the nature of the work<br>changes and continuously informs the<br>organization's overarching talent<br>management strategy                                  |
|                       | Position<br>Requirements | The activities and qualifications for<br>advanced analytics positions are<br>developed individually, without<br>connection to broader advanced<br>analytics needs | Methods to define work activities and<br>qualifications for advanced analytics<br>positions exist across the organization<br>but are shared minimally OR applied<br>inconsistently | Standard position descriptions to define<br>work activities and qualifications for<br>advanced analytics positions exist in<br>coordination to broader talent<br>management goals                                    | Position descriptions are normalized but<br>customized and tailored to specific<br>positions to define the work activities<br>and qualifications for the unique role  | There is a robust process to create<br>specific position descriptions, including<br>the documentation of the unique<br>requirements for the role, but also linked<br>to and aligned with enterprise-wide<br>qualifications for advanced analytics<br>positions as determined by a job<br>analysis |
| Talent<br>Recruitment | Attracting<br>Talent     | No action is taken to attract advanced<br>analytics talent to the organization prior<br>to reception of application   | Small, ad hoc efforts have been made to<br>entice advanced analytics candidates<br>OR marketing materials have been<br>developed   | Formal efforts exist to engage advanced<br>analytics candidates OR standardized<br>employer branding materials have been<br>developed to interest advanced analytics<br>candidates                                   | Ongoing activities are undertaken to<br>engage advanced analytics candidates<br>in the enterprise recruitment process<br>AND there is a plan for attracting the<br>right candidates                             | Advanced analytics candidates are<br>consistently engaged with the enterprise<br>through a comprehensive employer<br>brand message AND the strategy for<br>attracting talent is regularly reviewed to<br>identify enhancements  |
|                       | Sourcing<br>Talent       | The organization only becomes aware of<br>candidates after they apply for an<br>existing position   | Advanced analytics candidate sourcing occurs irregularly throughout the organization   | The organization has an approach for profiling advanced analytics talent and prioritizing sources  | A standardized and strategic approach<br>for profiling advanced analytics talent<br>and prioritizing sources exists AND<br>sourcing requirements are collected as<br>part of a regular formal planning activity | A standardized and strategic approach<br>for profiling advanced analytics talent<br>and prioritizing sources exists and is<br>centralized for the enterprise  |
|                       | Hiring Talent            | Advanced analytics talent is hired as<br>needed across the organization, without<br>any coordination or connection to<br>broader talent management efforts        | Processes for hiring advanced analytics<br>exist and vary widely across the<br>organization AND candidate hiring<br>criteria are primarily subjective                              | Formal hiring criteria have been defined<br>and processes for hiring advanced<br>analytics candidates exist, but are not<br>standardized   | Processes for hiring advanced analytics<br>candidates exist at the enterprise level,<br>and governance for their use across the<br>enterprise exists  | Advanced analytics candidates are hired<br>through an enterprise-wide process to<br>enable efficiencies and resource pooling  |

People

Identifies the set of human capital programs required to develop a talented and capable team of advanced analytics practitioners

| CATEGORY            | SUB-<br>CATEGORY        | Level 1   | Level 1 Level 2  |   | Level 4  | Level 5   |
|---------------------|-------------------------|---|--|---|--|---|
|                     | Workforce<br>Planning   | A process to identify the workforce requirements for advanced analytics does not exist  | Workforce requirements for advanced<br>analytics are calculated using different<br>methodologies over different time<br>horizons by business units                   | There is a formal approach to calculate<br>the workforce requirements for advanced<br>analytics practitioners but findings are<br>not consistently reported or used | There is a regular required planning<br>process to identify the organizational<br>workforce requirements for advanced<br>analytics   | Governed processes to identify the<br>workforce requirements for advanced<br>analytics exist and continuously inform<br>the overarching enterprise talent<br>management strategy  |
| Talent<br>Placement | Workforce<br>Management | No criteria to identify advanced analytics<br>positions exist AND there is no<br>accounting of the number and type of<br>advanced analytics staff | Advanced analytics positions are<br>inconsistently identified OR are only<br>identified by some business units AND<br>data is not aggregated for the<br>organization | Formal criteria to identify advanced<br>analytics positions exist, but findings are<br>not consistently reported or used  | An enterprise-wide hub identifies and<br>tracks advanced analytics positions in<br>coordination with sub-organizations and<br>maintains up-to-date information by<br>enforcing reporting requirements  | There is a dedicated team committed to<br>identifying, tracking and managing<br>advanced analytics talent across the<br>enterprise in support of broad workforce<br>development, risk management<br>(succession planning) and the talent<br>management strategy |
|                     | Workforce<br>Design     | Operating model does not reflect the<br>importance of advanced analytics in the<br>organization   | Operating model has been inconsistently designed to support achievement of analytics goals and priorities  | Operating model reflects formal<br>workforce design to support the<br>promulgation and use of analytics<br>throughout the organization                              | The expansion of advanced analytics<br>throughout the organization is a primary<br>consideration for the operating model<br>and the approach is standardized and<br>governed throughout the enterprise | The workforce is structured and<br>designed to operationalize analytics<br>most effectively (use, develop, share,<br>grow) throughout the enterprise and is<br>regularly re-evaluated for enhancement   |

|-----------------------|----------------------------------|--|---|---|---|--|
| Talent<br>Development | Talent<br>Management<br>Strategy | There is no approach to advanced analytics talent management   | Advanced analytics talent management<br>objectives exist, but are inconsistent OR<br>are not prioritized appropriately  | Advanced analytics talent management<br>goals and objectives exist but are not<br>prioritized against the overarching talent<br>management strategy of the organization   | There is an advanced analytics talent<br>management strategy with prioritized<br>goals and objectives AND the<br>organization is actively implementing the<br>strategy  | The advanced analytics talent<br>management strategy is the guiding<br>approach for all human resources<br>programs focused on advanced analytics<br>staff AND is reviewed annually to<br>improve as part of advanced analytics<br>workforce development |
|                       | Career<br>Development            | Career development programs for the<br>advanced analytics workforce do not<br>exist OR individual staff seeking<br>programs must look externally | Training programs for the advanced<br>analytics workforce exist but are limited<br>in nature OR have been identified by<br>business units and are not shared<br>across the organization   | Formal career development programs<br>for the advanced analytics workforce<br>exist but are not standardized for specific<br>analytics roles  | A formal career path with career<br>development programs for the advanced<br>analytics workforce mapped to specific<br>skill levels exists  | Career paths for the advanced analytics<br>workforce exist and are regularly<br>reviewed and enhanced based on<br>emerging learning opportunities  |
|                       | Performance<br>Management        | Performance management processes<br>are not adapted to the unique needs of<br>advanced analytics practitioners                                   | Informal or subjective performance<br>measures and metrics have been<br>created for single advanced analytics<br>positions  | Objective performance measures and<br>metrics exist for advanced analytics<br>positions AND are standardized across<br>the organization   | Objective performance measures for<br>advanced analytics positions are<br>standardized and enforced across the<br>organization  | Objective behavioral and competency-<br>based performance measures and<br>metrics exist for advanced analytics<br>positions and are reviewed and refined<br>as the nature of the work changes  |
|                       | Retention<br>Strategies          | Plans for retaining advanced analytics practitioners do not exist  | Engagement and motivation drivers for<br>retention of advanced analytics staff are<br>primarily determined based on intuition<br>or anecdote AND limited action has been<br>taken to retain advanced analytics<br>practitioners | Engagement and motivation drivers have<br>been identified with research and best<br>practices AND the organization has<br>developed retention plans to address the<br>unique profile of advanced analytics<br>practitioners | Engagement and motivation drivers have<br>been identified using a formal process<br>(e.g., survey, attrition data) AND are<br>required to be used to create enterprise<br>retention plans for advanced analytics<br>practitioners | Engagement and motivation drivers are<br>used to inform retention programs,<br>enterprise-wide policies, and the<br>overarching enterprise advanced<br>analytics talent management strategy  |

| Technology                  |  | Identifies the optimal ways to leverage new and existing technologies including applications,<br>data platforms and infrastructure to perform advanced analytics projects |  |  |  |
|-----------------------------|--|---|--|--|--|
| CATEGORY                    | DEFINITION   | SUBCATEGORY   | DEFINITION   |  |  |
|                             |  | Analytics Technology<br>Strategy  | The processes to establish and refine an enterprise-wide mission, goals, action plans, roles and responsibilities, and budget priorities for advanced analytics technology   |  |  |
|                             |  | Planning Review   | The assessment of current state and future needs for advanced analytics technology, the identification of gaps, and recommendation of areas for improved integration, development and maintenance  |  |  |
| Planning and                | The process for planning, developing, procuring, implementing, and   | Technology Research   | The processes for conducting research and development activities into technologies to support the enhancement of the organization's advanced analytics capabilities  |  |  |
| Development                 | maintaining advanced analytics   | Internal Development  | The lifecycle processes to develop tools internally to support analytic tradecraft within the organization   |  |  |
|                             | technology   | Purchasing New Tools  | The processes to test, vet and purchase new/updated tools and packages to grow the organization's advanced analytics capabilities within the framework of the organization's procurement process   |  |  |
|                             |  | Implementation/Deployment   | The release of fully vetted internal tools, including enhancements to existing tools, and externally procured software and hardware to the organization  |  |  |
|                             |  | Maintenance/Support   | The continuous support of current tools, infrastructure, and processes to identify and make incremental improvements to those tools  |  |  |
|                             | The foundational layer of an advanced<br>analytics solution to allow for a secure,<br>low-risk deployment of servers and<br>hosting services | Physical Resources  | The technical requirements and enterprise-wide architectural framework associated with modeling, storing, delivering and integrating data into downstream systems  |  |  |
| Infrastructure              |  | Resource Abstraction  | Enterprise-wide resource abstraction (e.g. virtual machines and data storage deployment) allows advanced analytics practitioners more individual control of their software configurations, without dividing the physical hardware (e.g., allowing multiple virtual connections to a cluster of machines) |  |  |
|                             |  | Core Services   | The publication, promotion and oversight of enterprise-level application program interfaces (API) in a secure, scalable environment which support a single point of access for users to the data stores  |  |  |
| Data                        | The secure repository for data of all types and origins, making them available   | Data Repository   | The repository that integrates all data regardless of schema, taxonomy, or data type/format where individual data sets can be secured granularly   |  |  |
| Management                  | for a wide breadth of analyses   | Data Sources  | The combination of data from a heterogeneous set of data stores to create one unified view of all that data  |  |  |
| Analytics                   | The advanced analytics technologies used to unlock the value of data to  | Analytics Services  | The technological services which, when enabled by a tool, provides the capability to conduct specific analysis, modeling, testing, and simulations needed for decision making  |  |  |
| Services and<br>Interaction | generate business insights that were not previously recognized   | Tools and Software  | The set of tools which provide end-users with access to a variety of shared technology and services which connect to and manage the data stores  |  |  |
| Human Insights              | Visualizations and interfaces which can  | Visualization Tools   | The tools which enable the development of dashboards and graphics to communicate the results of the advanced analytics   |  |  |
| and Actions                 | be used to synthesize and communicate the organization's data  | Interfaces  | The interactive tools which provide dynamic interaction between users and advanced analytics tools 24  |  |  |

Technology

|                             | Analytics<br>Technology<br>Strategy | An enterprise analytics technology<br>strategy does not exist for the technology<br>required to support advanced analytics | An initial draft enterprise strategy for<br>analytics technology is identified on an ad<br>hoc basis OR in support of immediate<br>business needs   | A formal enterprise strategy for analytics<br>technology has been established and<br>goals/objectives are defined regularly in<br>support of business needs   | An enterprise analytics technology<br>strategy is regularly defined and<br>developed, complete with prioritized<br>goals/objectives and action plans to<br>support implementation.     | The formal enterprise strategy along with<br>individual goals and objectives<br>(reviewed/refined annually) are prioritized<br>against the overarching technology<br>strategy AND action plans are<br>continuously monitored to identify<br>improvements and increase efficiencies |
|                             | Planning Review                     | Advanced analytics technology planning review processes do not exist   | Advanced analytics technology needs<br>assessments occur in conjunction with<br>immediate needs (external requests)<br>AND there is no formal process to<br>conduct a gap analysis  | Advanced analytics technology needs<br>assessment and a formal gap analysis<br>occur regularly  | Advanced analytics technology planning<br>review processes are integrated into<br>advanced analytics programs  | Advanced analytics technology planning<br>review processes are reviewed and<br>revised regularly as part of a multi-year<br>planning process   |
|                             | Technology<br>Research              | Processes to support research into<br>advanced analytics technology do not<br>exist  | Research into advanced analytics technology is conducted in response to immediate needs   | Research into advanced analytics<br>technology occurs as part of a formal<br>process and various tools are identified to<br>support project needs   | Research into advanced analytics<br>technology is integrated into the IT<br>investment process and identified tools<br>are approved for integration                                    | Research processes and tools are regularly reviewed and revised as needed  |
| Planning and<br>Development | Internal<br>Development             | IT processes do not account for development of advanced analytic tools   | Development of advanced analytics tools<br>occurs ad hoc, outside of established IT<br>SDLC processes OR occurs to meet<br>immediate needs  | Established SDLC processes have been<br>standardized to include the requirements<br>and design needs specific to advanced<br>analytics tools  | Development testing and review<br>processes are created specific to the<br>needs of advanced analytics tools   | Established SDLC processes are<br>reviewed regularly and revised as-<br>needed to specifically support advanced<br>analytics tools   |
|                             | Purchasing<br>New Tools             | Processes to support the selection and<br>purchase of advanced analytics tools do<br>not exist                             | Selection processes to vet new advanced<br>analytics tools occur outside the<br>framework of IT investment process to<br>meet immediate needs   | An enterprise-standard selection process<br>to vet and test new advanced analytics<br>tools for purchase exists (e.g., sandbox)   | Governed enterprise-level selection<br>processes to vet and test new advanced<br>analytics tools exist   | Enterprise selection process to vet new<br>advanced analytics tools is reviewed and<br>refined regularly. Buying process is<br>integrated with capital planning, uniting<br>business requirements  |
|                             | Implementation/<br>Deployment       | Implementation/deployment plans for advanced analytics tools do not exist  | Implementation/deployment plans for<br>advanced analytics tools are developed<br>on an as needed basis OR are applied<br>inconsistently   | A standardized implementation/<br>deployment plan for advanced analytics<br>tools exists and includes processes for<br>accessibility  | A governed implementation/deployment<br>plan incorporates processes for<br>provisioning to ensure platform can<br>support new tools  | Implementation/deployment plans for<br>advanced analytics tools are reviewed<br>and revised as needed  |
|                             | Maintenance/<br>Support             | Processes for the maintenance/support of advanced analytics tools do not exist   | There is no consistent process to<br>manage licenses for advanced analytics<br>software OR process is inconsistent<br>across the enterprise OR monitoring of<br>software and tools occurs only in<br>response to immediate needs (e.g.,<br>external events) | A formal enterprise-wide process for<br>managing distribution of advanced<br>analytics software and tools and a<br>copyright use policy is in place alongside<br>continuous monitoring of software and<br>tools | Copyright and acceptable use policy are<br>governed for advanced analytics tools,<br>and an enterprise-wide process is<br>established to ensure users have access<br>to latest updates | Enterprise-wide update processes are in place, including processes for decommissioning tools AND all maintenance and support activities are reviewed and revised as needed 25  |

Technology

Identifies the optimal ways to leverage new and existing technologies including applications, data platforms and infrastructure to perform advanced analytics projects

| CATEGORY                      | SUB-<br>CATEGORY        | Level 1   | Level 2  | Level 3   | Level 4  | Level 5  |
|-------------------------------|-------------------------|---|--|---|--|--|
| Infrastructure                | Physical<br>Resources   | Enterprise-wide physical resources do not support advanced analytics activities | Enterprise-wide physical resources<br>reflect an architectural framework that is<br>developed to respond to immediate<br>needs             | Enterprise-wide physical resources<br>reflect a standardized architectural<br>framework includes technical<br>requirements  | Enterprise-wide physical resources are in<br>place with governed architecture<br>framework and is optimized to support<br>advanced analytics                                 | Scalable enterprise-wide architectural<br>framework is reviewed and revised as<br>needed to plan for longer term technology<br>needs   |
|                               | Resource<br>Abstraction | Resource abstraction does not consider advanced analytics needs                 | Resource abstraction is provisioned as<br>needed per use case OR are being used<br>inconsistently across the enterprise                    | Resource abstraction has been<br>orchestrated as per enterprise-wide<br>architectural solution stipulations that<br>adhere to security policies   | Resource abstraction has been<br>standardized across the enterprise with a<br>consistent rollout process, and is<br>monitored for performance                                | An architectural framework for resource<br>abstraction is maintained and improved<br>over a long term period following<br>corresponding physical resource<br>revisions, allowing for resource elasticity |
|                               | Core Services           | Enterprise-wide API management<br>processes do not exist                        | Enterprise-wide API management only<br>occurs in response to immediate needs,<br>with very little functionality offered<br>through the API | Formal enterprise API management<br>processes utilize SOA and an open API<br>framework; some common functionality is<br>offered through the API   | Governed enterprise API management<br>processes allow all common functionality<br>to be offered through the API  | The enterprise-wide API management<br>framework is reviewed and refined as<br>needed to plan for needs over a multi-<br>year period  |
| Data<br>Management            | Data Repository         | Data repository design do not consider<br>advanced analytics needs              | Data repository supports ingest and basic<br>querying across a limited set of systems<br>and databases                                     | Data repository supports ingest, security tags and querying for all systems and databases   | Data repository supports distributed storage and processes to keep data up to date   | Data repository supports querying of data<br>in real time, and is reviewed and revised<br>to plan for data needs over a multi-year<br>period   |
|                               | Data Sources            | Processes for data integration are not available for any data types             | Processes to integrate data are available<br>for a limited set of data sources are<br>created in response to immediate needs               | Standardized processes for data integration are available for most types of data sources  | Governed processes for data integration are available for all types of data sources  | Data integration processes are reviewed<br>and revised as needed to plan for data<br>needs over a multi-year period  |
| Analytics                     | Analytics<br>Services   | Analytics services do not support any level of advanced analytics investigation | Analytics services are able to support descriptive, basic discovery, and unsophisticated explanatory analytics                             | Analytics services are available to<br>support discovery and explanatory<br>analytics   | Analytics services are available to support predictive analytics   | Analytics services are available to support prescriptive analytics   |
| Services and<br>Interaction   | Tools and<br>Software   | Tools to support interaction with data do not consider advanced analytics needs | COTS tools exist to support interaction<br>with data for advanced analytics<br>practitioners   | Open source and search tools exist to<br>support interaction with data by advanced<br>analytics practitioners   | User interaction tools are able to support<br>all interested users who are trained in the<br>tools   | User interaction tools are able to support all staff with minimal training required  |
| Human Insights<br>and Actions | Visualization<br>Tools  | Visualization tools do not consider advanced analytics needs                    | Initial tools (may not be sophisticated) are<br>identified to create visualizations for<br>some advanced analytics artifacts               | Sophisticated visualization tools are<br>identified and integrated as part of the<br>overall architecture. Customized reporting<br>tools are developed and reused for each<br>reporting type. | Customized reports are dynamically<br>created using the sophisticated<br>visualization tools for specific advanced<br>analytics artifacts                                    | Using the integrated tools, customized<br>reports are dynamically created for each<br>advanced analytics artifact, and<br>visualization processes and tool sets are<br>continuously reviewed and refined |
|                               | Interfaces              | Existing interfaces do not support interaction with advanced analytics tools    | Interfaces exist to monitor the results from advanced analytics tools  | Interfaces exist to provide users alerts<br>based on the results of advanced<br>analytics tools   | Interfaces are in place to provide dynamic<br>reporting from advanced analytics<br>artifacts to provide information on key<br>performance indicators for the<br>organization |  |

Culture

X

Identifies the set of organizational mechanisms that reinforce, communicate, and share the importance of advanced analytics to support evidence based decision making

| CATEGORY       | DEFINITION   | SUBCATEGORY             | DEFINITION   |
|----------------|--|-------------------------|--|
|                | The communications and organizational  | Communications          | Regular exchange of information within an organization to discuss and share analytic insights through a variety of channels  |
| Engagement     | techniques which drive workforce<br>engagement in advanced analytics, build<br>momentum for advanced analytics, and<br>recognize staff for using and leveraging<br>analytics | Marketing and Branding  | The approach and language used to convey specific meaning, promote adoption of advanced analytics and build awareness for analytics resources  |
|                |  | Leadership              | The level to which leadership is engaged and supportive of the value of advanced analytics and actively progressing the goal for evidence-based decision making  |
|                |  | Recognition             | The specific organizational programs which recognize the employees that engage with, create and actively use advanced analytics  |
|                | The organizational programs and  | Structural Mechanisms   | The organizational design mechanisms available to promote analytics throughout the organization (e.g., issue teams, reporting relationships)   |
| Organizational | structures that support and nurture advanced analytics throughout the  | Policies and Procedures | The principles, rules and guidelines formulated or adopted by the organization in order to achieve evidence-based decision making  |
| Enablers       | organization, such as cross-business<br>teams, town hall meetings, and<br>networking events  | Community               | The group of staff within the organization that self-identify an interest in advanced analytics and join together in support of a broader collective goal of growing knowledge of, and sharing best practices in, advanced analytics |
|                |  | Learning                | The specific events and knowledge management platforms harnessed to identify, use and share advanced analytics knowledge to all staff in an effort to develop the organization's capability in advanced analytics                    |

Identifies the set of organizational mechanisms that reinforce, communicate, and share the importance of advanced analytics to support evidence based decision making

|------------|---------------------------|---|---|--|--|---|
| Engagement | Communications            | There are no communications focused on advanced analytics                               | Communications on the subject of<br>advanced analytics exist but are irregular<br>and distribution is limited   | There are formal communications on the<br>subject of advanced analytics but<br>messages are sent to meet one-time<br>needs   | A comprehensive communications plan<br>is being implemented to include a<br>schedule for communications,<br>performance measures, and analysis of<br>stakeholder groups                  | There is a dedicated advanced analytics<br>communications strategy aligned to<br>broader organizational communications,<br>tailored to specific stakeholder groups<br>and reviewed regularly for<br>enhancements      |
|            | Marketing and<br>Branding | No marketing for advanced analytics exists  | Basic advanced analytics marketing<br>exists OR advanced analytics is being<br>marketed inconsistently OR were only<br>developed to deliver a single message<br>(e.g., establishment of a new division) | Formal marketing on the value of<br>advanced analytics exists OR advanced<br>analytics marketing is attempting to<br>reach all customers with a single<br>message  | An enterprise-wide advanced analytics<br>marketing plan to reach all customer<br>segments (as determined through a<br>customer segmentation analysis) exists<br>and is being implemented | Targeted and specific marketing to each<br>customer segment has been developed<br>and is used to drive engagement with<br>specific workforce groups to optimize<br>advanced analytics marketing for the<br>enterprise |
|            | Leadership                | Announcements demonstrating<br>leadership commitment to analytics have<br>not occurred  | There have been ad hoc announcements<br>across the organization from leaders<br>sharing their commitment to analytics<br>AND leaders have begun to use<br>analytics inconsistently                      | There is an ongoing leadership initiative<br>to increase analytics adoption which has<br>been formally shared across the<br>organization AND leaders are using<br>analytics more regularly for decision-<br>making | Leadership is expected to contribute to<br>advanced analytics capability by<br>reinforcing and demonstrating a<br>commitment to using data and making<br>evidence-based decisions        | Leadership is reinforcing the value of<br>advanced analytics in all activities and<br>ongoing business operations and<br>consistently identifies ways to increase<br>adoption in ordinary business tasks              |
|            | Recognition               | There are no organizational opportunities for recognizing the use of advanced analytics | There is ad hoc recognition for using<br>advanced analytics OR recognition is not<br>aligned to desired behavior  | Formal recognition for using advanced<br>analytics exists as part of an informal<br>plan to increase staff adoption  | Adoption of advanced analytics has<br>been included in the performance goals<br>for the organization   | The adoption of advanced analytics<br>throughout the organization is measured<br>regularly and action plans are modified<br>and enhanced as needed  |

Culture

Culture

Identifies the set of organizational mechanisms that reinforce, communicate, and share the importance of advanced analytics to support evidence based decision making

| CATEGORY                   | SUB-<br>CATEGORY           | Level 1 Level 2   |   | Level 3  | Level 4  | Level 5   |
|----------------------------|----------------------------|---|---|--|--|---|
| Organizational<br>Enablers | Structural<br>Mechanisms   | No organizational structures exist to<br>support advanced analytics   | Ad hoc organizational structures (e.g.,<br>cross-organization issue teams) have<br>been created to support the use of<br>advanced analytics OR teams have<br>developed informal structures                          | The organization has formal structural<br>mechanisms which support the use of<br>analytics (e.g., cross-organization<br>analytic validation or project<br>sponsorship)       | The organization has implemented<br>structural mechanisms to coordinate the<br>use of analytics (e.g., dedicated<br>analytics representative within each sub-<br>organization) | An enterprise-wide formal functional design to support the use of advanced analytics exists, and is reviewed regularly  |
|                            | Policies and<br>Procedures | Policies and procedures supporting the<br>promulgation and use of analytics in the<br>organization do not exist | Policies and procedures have been<br>updated to address the need for<br>advanced analytics in some parts of the<br>organization OR only some policies and<br>procedures have been updated for<br>advanced analytics | The organization has incorporated the need for data driven analysis in formal policies and procedures  | Policies and procedures on advanced<br>analytics are governed to ensure<br>appropriate development, use, and<br>decision-making with advanced analytics                        | Guidebooks, toolkits and other<br>supporting documents have been<br>developed to demonstrate the<br>integration of advanced analytics<br>policies and procedures into ongoing<br>operations |
|                            | Community                  | There is no community of advanced analytics practitioners   | Multiple small communities of advanced<br>analytics practitioners exist OR minimal<br>actions have been taken to self-identify<br>and gather  | A self-organized, community for advanced analytics practitioners exists  | There is an established and documented<br>community of interest for advanced<br>analytics with regular events and<br>activities  | The community of interest has a vision<br>and mission for improving the<br>organization's advanced analytics<br>capability through a series of community<br>based programs and events       |
|                            | Learning                   | There are no channels OR methods to learn about advanced analytics in the organization                          | Advanced analytics learning<br>opportunities must be identified at the<br>individual level OR distribution of<br>organizational knowledge (best<br>practices) is limited  | Formal learning opportunities (e.g.,<br>knowledge management sites, guidance<br>documents, toolkits) in the area of<br>advanced analytics exist, but are not<br>standardized | Standard and accessible advanced<br>analytics learning opportunities exist and<br>are supported by a learning strategy to<br>improve the capability across the<br>organization | Advanced analytics learning<br>opportunities exists as part of a formal<br>knowledge management program<br>supported by peer development and<br>regularly reviewed for enhancement          |
