### Social Security Financing and Benefits: Myths vs. Facts

Steve Goss
Chief Actuary
Social Security Administration

DePaul University February 21, 2024

### What We Do at the Social Security Administration

- Administer Social Security—and Supplemental Security Income
- Provides income security for virtually all in the U.S. in the event of:
  - Becoming disabled,
  - Dying and leaving behind surviving family members, or
  - Reaching old age (62 for Social Security, 65 for SSI)
- Providing a bridge to health care through Medicare and Medicaid

### Role of the Office of the Chief Actuary

- Evaluate financial status of OASDI and SSI
  - Project future population, workforce, employment, tax revenue, benefits, and (for OASDI) the status of trust funds
- Projections for the President's FY Budget and MSR
- Projections for Annual Trustees Report (OASDI)
  - Board of Trustees: Treasury, HHS, DOL, SSA
- Projections for Annual SSI Report
- Estimate effects of all changes considered for law and regulations by the Administration and Congress

# First, A Few Facts About Social Security...

### **Social Security: What Does It Provide?**

- Retirement and survivor monthly benefits started in 1940
  - Never missed a payment!
- Eligibility age lowered from 65 to 62 in 1957 for women, 1962 for men
  - Full retirement age rises from 65 to 67 by 2022
- Disability benefits started in 1957
- Benefits rise with average wage across generations but with just CPI after eligibility
- Payroll taxes roughly pay-as-you go
  - Rose from 2% to 12.4% as the system matured

### Social Security: Who Pays, Who Benefits

#### WHO PAYS?

- 95% of workers contribute: 180 million in 2023
  - 12.4% of earnings up to \$168,600 (6 percent of workers earn more)
  - 25% of state and local gov't employees are not in Social Security

#### WHO BENEFITS?

- 67 million retirement, survivor, disability beneficiaries in 2023
  - 53 million retirees and their dependent beneficiaries (spouses and children)
  - Plus 6 million survivors
  - Plus over 9 million disabled workers and their dependents
- About 160 million workers are insured against disability/death

### **Social Security Financing**

- Basically "pay-as-you-go"
  - Current workers provide for current beneficiaries
  - Social Security cannot borrow
  - Trust Fund securities provide a "contingency reserve"
- Current OASDI reserves (excess income) = \$2.8 trillion
  - Available to augment tax income as needed
  - Roughly 2 times the annual cost of the program
- Reserves now projected to become depleted
  - In 2034, with continuing income covering 80%
  - Expect Congress to act—as it always has

### Now, a Few Common Myths

- 1) Social Security is bankrupt, insolvent, running out of money, and COVID made it much worse
- 2) Increasing longevity and disability are the problem
- 3) The money in the trust funds has been spent
- 4) I should start benefits as soon as I can
- 5) My tax contributions have been saved up for *me*
- 6) Benefits scheduled in the law would be all I need
- 7) Social Security is responsible for the Federal debt
- 8) "Fixing" the Social Security shortfall will be hard

### Myth 1: Social Security Is Bankrupt, Insolvent, Running Out of Money, and COVID Made it Much Worse

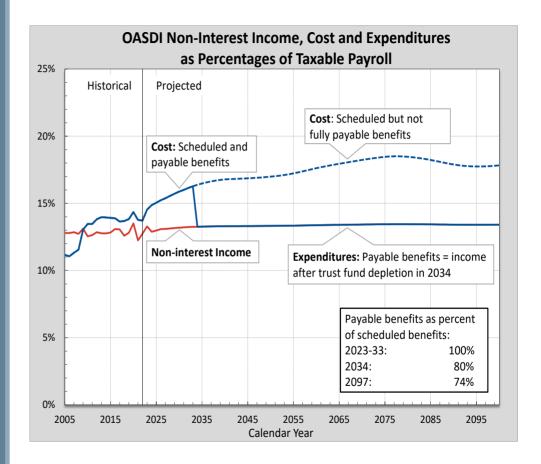

- a) Social Security *cannot* run out of money
- b) Even if Congress allowed trust fund reserves to deplete...
  - Continuing income would cover 80% of scheduled benefits in 2034
  - And 74% of scheduled benefits in 2097
- c) Over 80+ years, Congress has always acted timely Scheduled benefits have always been paid in full
- d) COVID being temporary has a modest effect

#### OASDI Annual Cost and Non-Interest Income as Percent of Taxable Payroll

Persistent negative annual cash-flow balance starting in 2010.

80 percent of scheduled benefits still payable at trust fund reserve depletion.

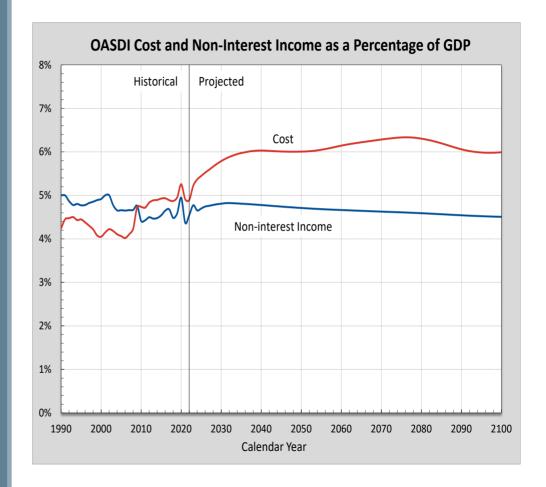

Annual deficit in 2097: 4.35 percent of payroll: 0.09 percent larger than last year.

### SUSTAINABILITY: Cost as percent of GDP

Rises from a 4.2 percent average in 1990-2008, to a peak of about 6.3 percent for 2076, and then declines to 6.0 percent by 2097.

Future non-interest income is 4.5 percent of GDP.

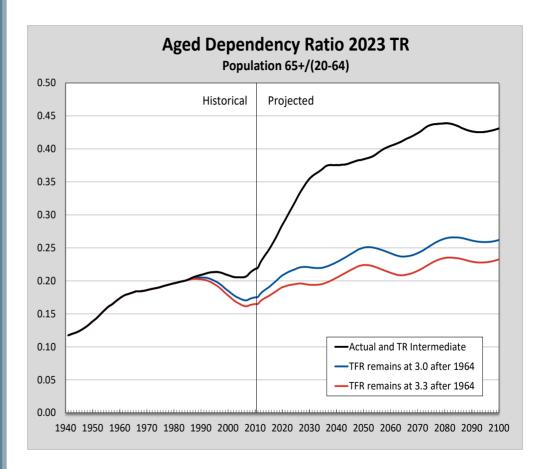

### Myth 2: Increasing Longevity and Disability Are the Problem

- a) The age distribution of the population is the most important factor in Social Security cost
  - Population "aging" through 2035 is mainly due to birth rates
- b) Shifting earnings levels have reduced income
- c) Disability costs have matured, and are dropping

### Aging — Change in Age Distribution

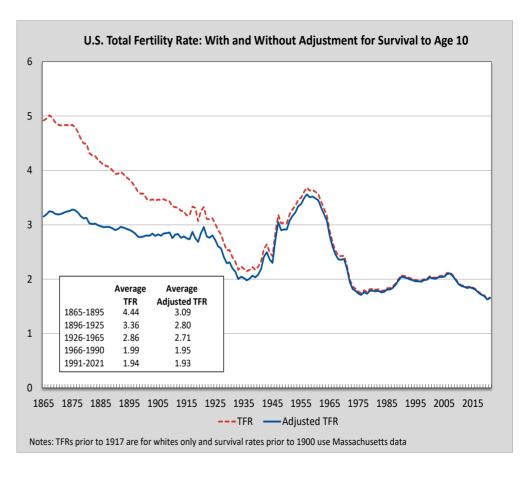

The primary reason for increasing cost relative to payroll and GDP.

Mainly due to drop in birth rates.

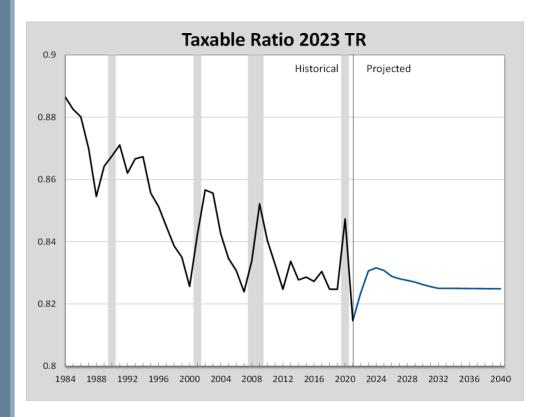

#### Birth Rates

Average Total Fertility Rate falls from 3 to 2

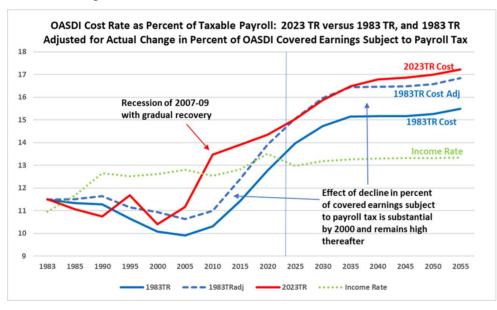

Earnings
"Dispersion"
Between 1983 and
2000 Lowered the
Percent of Earnings
Taxable from 90% to
82.5%

Overall, average earnings increased more than expected, but real growth was 62% for the top 6% of workers, while only 17% for lower 94% of workers.

### The Reduced Share of Earnings Subject to Payroll Tax Explains Most of the Increase in Cost as Percent of Payroll, Compared to the Projection in 1983

 But the depth of the 2007-09 recession and slow recovery further reduced expected trust fund accumulation through 2019

#### Another Reason: Ratio of Taxable Earnings to All OASDI Covered Earnings

Declined since 1983 due to increasing concentration of earnings at the top of the distribution, particularly through 2000.

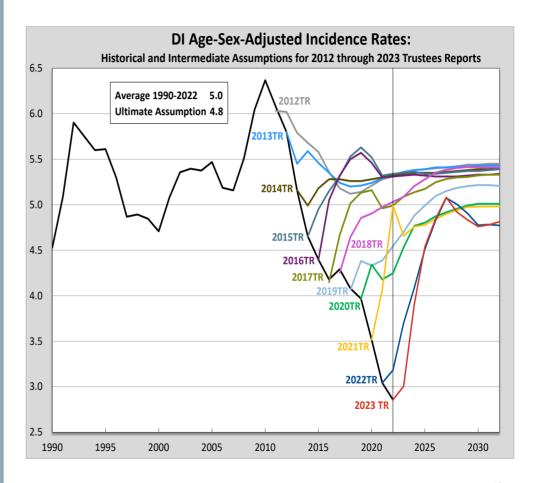

Between 1983 and 2000, the top 6% of earners increased annual real earnings by 62%. The rest of workers saw only a 17% increase

#### Disability Incidence Rate Also Remains Historically Low

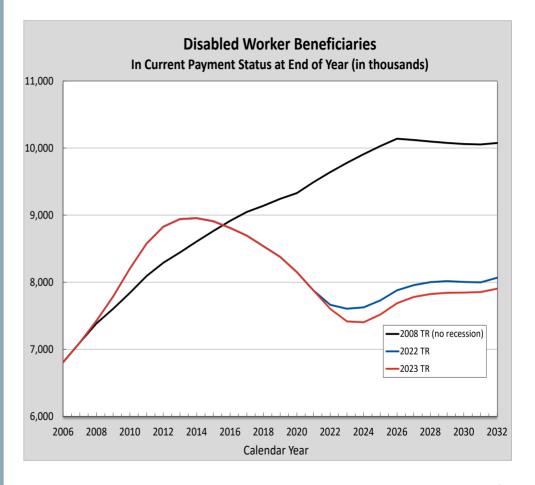

DI disabled worker incidence rate rose sharply in the 2008 recession, and has declined since the peak in 2010 to extraordinarily low levels in 2016 through 2022.

What will be the NET effect of COVID and post-COVID conditions?

#### Fewer Disabled Worker Beneficiaries

Fewer now and in near term based on recent applications and incidence rates, with assumed increases deferred another year.

### Myth 3: The Money in the Trust Funds Has Been Spent

- a) Every dollar of income is invested by law in *interest-bearing securities backed by the full faith and credit of the United States* 
  - These are not "worthless IOUs"!
- b) Securities are issued at market yield rates
- c) Securities held by the Trust Funds have always been honored, as have all other Treasury issues

### Myth 4: I Should Start Benefits As Soon As I Can

- a) Social Security retirement benefits are designed to provide about the same lifetime value regardless of when you start, on average
- b) When to start is personal—you might want to wait if you are in average or better health
- c) If you delay by working or using other assets, Social Security increases your monthly life annuity payments, but you will receive them for fewer months!

### Myth 5: My Tax Contributions Have Been Saved Up for *ME*

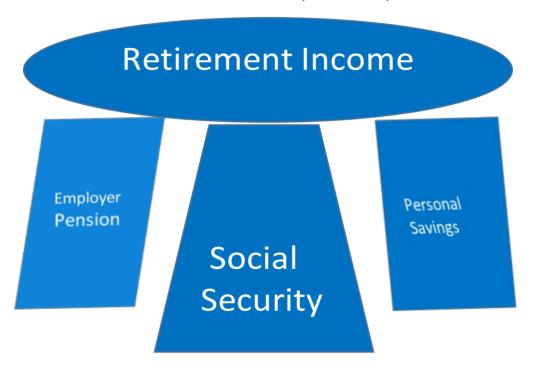

- a) Social Security is a "social contract"
- b) Basically, benefits paid today are financed from contributions by recent workers
- c) This is why the age distribution of the population is fundamental—the workers of the day share with the retirees, survivors, and disabled of the day
- d) This is true for advance-funded systems as well

### Myth 6: Benefits Scheduled in the Law Would Be All I Need

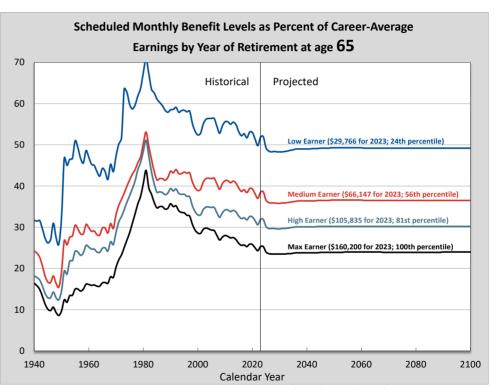

- a) Recall the 3-legged stool: 75-80% in retirement
- b) Social Security provides about 40% of careeraverage earnings (varies from 25% to over 80%)
- c) So the other legs of the stool—personal savings and private pensions—are needed
- d) But increasingly, Social Security is the primary source of lifetime income

### Three-Legged Stool: Basis for Retirement Planning

Common wisdom—aim for 75-80 percent replacement rate

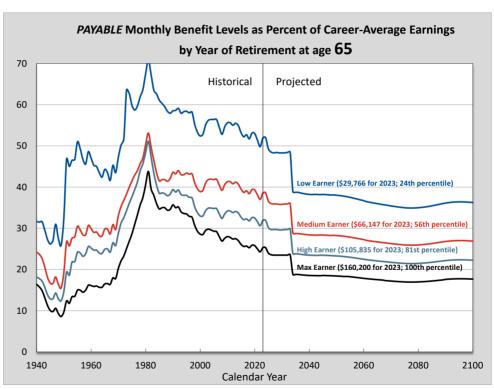

#### Replacement Rates Based on the 2023 TR

Source: Annual Recurring Actuarial Note #9 at www.ssa.gov/oact/NOTES/ran9/index.html

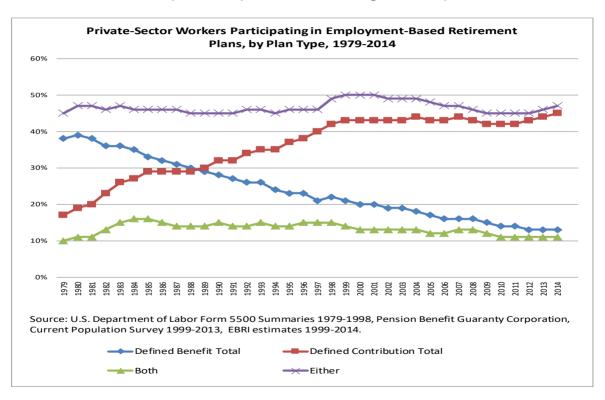

Payable Benefits Under the Law, After Trust Fund Reserves Are Depleted, Are Even Lower

Source: Annual Recurring Actuarial Note #9 at www.ssa.gov/oact/NOTES/ran9/index.html

### **Defined Benefit Plans Replaced by DC Plans**

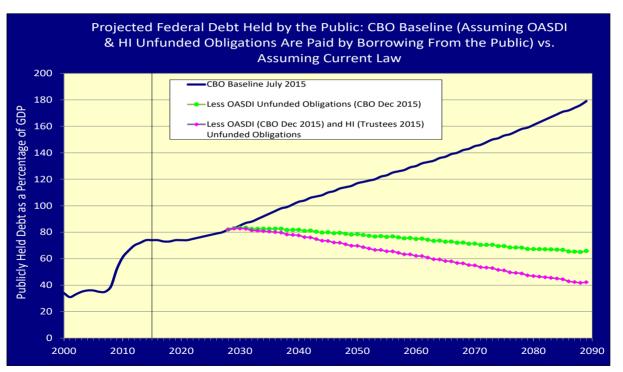

And lump sum options increasing for DB plans

### Myth 7: Social Security Is Responsible for the Federal Debt

- a) OASI, DI, HI Trust Funds do *not* add to the debt
- b) In fact, these trust funds finance part of the debt
- c) If trust fund reserves are ever depleted, the programs cannot borrow
- d) Thus, the common "budget scoring convention" is misleading and inconsistent with the law

## So—What If We Project Federal Debt Consistent With the Law? Projection to 2090 Back in 2015 Now CBO only projects debt 30 years (to 2053)

### Myth 8: "Fixing" the Social Security Shortfall Will Be Hard

- a) Need to adjust the benefits or revenue given the shift in the age distribution
- b) By 2034, lower scheduled benefits by 1/4, or raise revenue by 1/3, or some combination
- c) Question: what do the American people want?
- d) Many options are already under consideration

### **Some Ways to Lower Cost**

- Lower benefits for retirees—not disabled?
  - Increase normal retirement age (lowers OASDI cost, but increases DI cost)
  - Can exempt long-career low earners (Simpson Bowles 2010)
- Lower benefits mainly for high earners?
  - Reduce PIA above some level
  - Often combined with increasing PIA below some level, subject to work year requirements
- Lower benefits mainly for the oldest old?
  - Reduce the COLA, using the "chain-weighted C-CPI-U
  - But some say increase it with the CPI-E (based on purchases of consumers over age 62)

### Some Ways to Increase Revenue

- Raise the 12.4 percent OASDI payroll tax rate?
- Raise tax on highest earners?
  - Increase taxable maximum amount, to tax 90% of earnings?
  - Or tax on all earnings above the current maximum
- Take advantage of returns on investments
  - Invest trust fund reserves as suggested by Kerrey/Simpson 1995 proposal and Ball in 1994-96 Advisory Council
  - Or tax investment returns as in the 2010 ACA and in many proposals since
