

Notes and Brief Reports

State Accounts in the Unemployment Trust Fund

The operations of the unemployment trust fund in 1948 reflected the year's favorable employment conditions. Deposits by the States exceeded withdrawals by \$130 million, and the interest earned on the fund's holdings of Government securities further increased the excess of income over outgo to \$285 million.

The States deposited \$989 million in their accounts and withdrew \$860 million for payment of unemployment benefits (table 1); in 1947 they had deposited \$1,097 million and withdrawn \$785 million. The decline of \$108 million in deposits reflected the lower contribution rates under experience-rating provisions, while the \$75 million increase in withdrawals resulted primarily from a rise in average benefit amounts. The balance of all State accounts in the fund on December 31, 1948—a record high of \$7,561 million—was 11 percent higher than the balance 2 years earlier but only 3.9 percent higher than that at the end of 1947.

All but six States—California, Connecticut, Massachusetts, New Jersey, New York, and Rhode Island—had larger balances in the fund at the end of 1948 than they had a year earlier. Rhode Island and New Jersey withdrew \$14 million and \$50 million respectively from the fund to finance their State temporary disability programs; but for these withdrawals their balances would have declined only slightly.

Increases in the other State accounts ranged from 0.4 percent for the District of Columbia and 2.9 percent for New Hampshire to 20.3 percent for Michigan. Of the 51 State accounts, 40 showed increases equal to or greater than the national average of 3.9 percent, while 21 had increases of more than 10 percent.

Differences in the ratios of benefits and of contributions to taxable pay rolls reflect the provisions of State laws, the industrial characteristics of

the State, and the level of employment during the year. The rate of accumulation of State reserves depends on the relation of these ra-

tios to each other. The estimated average employer contribution rate for the Nation in 1948 was 1.2 percent of taxable pay rolls, as compared with 1.4 percent in 1947; benefits were disbursed at a rate of 1.0 percent of taxable wages (table 2). The employer contribution rate was greater

¹ Includes deposits not cleared by the Treasurer of the United States, withdrawals in outstanding checks, and accrued interest receivable. Figures therefore differ from those in table 5, page 20, which do not include these items.

Source: Treasury Department, Bureau of Accounts.

than the benefit rate in all but six States. In five States it was four or more times the benefit rate; in eight, it was roughly triple the benefit rate; and in 15, about double.

The average employer contribution rate in 1948 varied from 0.3 percent in Connecticut to 2.1 percent in Mississippi. The ratio of benefits to taxable wages ranged from 0.2 percent in Texas to 2.5 percent in Rhode

Island. Only 12 States paid benefits equal to 1.0 percent or more of taxable pay rolls; 18 States paid benefits at a rate of 0.5 percent or less. The drop from 1947 to 1948 in the national benefit rate (from 1.1 to 1.0 percent) reflected declines in the ratios of 20 States. In 11 States the ratio was the same as in 1947, and in 20, it was higher.

Interest

Each State account was also increased by its share of the interest earned on investments held by the unemployment trust fund. The in-

terest earned in 1948, distributed quarterly among the State accounts on the basis of the average daily balance in each account, amounted to 2.13 percent of the balance in all State accounts on December 31, 1947. Thirty-one States earned less than \$2 million, and seven earned more than \$5 million. The interest earned by the District of Columbia account was enough to more than offset the excess of withdrawals over deposits.

At the end of 1948 the total amount of funds available for benefit payments was \$7,603 million. This amount represented balances in the

trust fund amounting to \$7,561 million and the sum of the amounts in the individual State clearing accounts and State benefit payment accounts.

Contributions and Benefits, January-March 1949

Table 3, which compares contributions and benefits under the State unemployment insurance programs for the first quarter of 1948 with those

for the first 3 months of 1949, indicates the rise in unemployment in the latter period. Contributions dropped in 18 States, reducing the national total by 6.5 percent, while benefit payments went up 90.5 percent. The declines in contributions, which reflect in part decreases in average weekly hours of work in manufacturing and a drop in average hourly and weekly earnings, ranged from 1.7 percent in Colorado to 91.2 percent in

New Jersey. However, a part of the New Jersey decrease is attributable to recent changes in the contribution rate. Twenty State accounts showed an increase of 10 percent or more.

Benefit payments during the first quarter of 1949 increased over the comparable period in 1948 in all States. Seven States showed increases of less than 50 percent, while 22 had increases of more than 100 percent.
