Credit Unions Under State Charters, 1953*

TATE-chartered credit unions, like those under the Federal Credit Union Act, are cooperative associations organized to provide thrift and consumer-loan services for their members. The passage of the first State credit union law, however, preceded the adoption of the Federal law by 25 years. Massachusetts in 1909 passed the earliest legislation of this

type, and by 1934, when the Federal Credit Union Act was passed, a total of 38 States had adopted laws governing the granting of charters and the supervision of credit unions. Today there are local credit union laws in all States except Delaware, Nevada, South Dakota, and Wyoming. The District of Columbia and Puerto Rico also have their own credit union laws.

Responsibility for collecting and reporting on the operations of the State-chartered credit unions was transferred to the Bureau of Federal Credit Unions effective April 1953. The Bureau's first report was for the

year that ended December 31, 1952.1

Reporting Method

Questionnaires that call for composite State credit union data are mailed to all State supervisors early in the year, and the composite report for the United States is compiled as soon as all obtainable State reports are received. The last questionnaire included in the report for 1953 was received in September 1954. Data for the States of Arizona, Indiana, Kentucky, and New Hampshire are as of June 30, 1953, and those for Missouri are as of September 30. The data for all other States are as of December 31. The variations in the cut-off dates are the result of differences in credit union fiscal years or in reporting dates among the States.

1 See the Bulletin, November 1953, pages 11-13. Reports for earlier years were made by the Bureau of Labor Statistics and published in the Monthly Labor Review; the last report made on the subject by that Bureau summarized operations in 1951 and appeared in the Review for February 1953, pages 155-158.

The unreported items in the incomplete questionnaires usually reflect differences in the reporting requirements established by the State supervising agencies. As in previous years, estimates were made for unreported items in the reports for 1952 and 1953 because of the interest of many persons in the national totals for State-chartered credit unions. Although the influence of any errors in these estimates is probably negligible in the aggregates, the variations between the actual and estimated data for an individual item could be substantial. For this reason the individual estimates are not shown in table 3; they are reflected, however, in the totals for State-chartered credit unions in tables 1, 3, and 4.

Operations in 1953

The growth of the State-chartered credit unions — uninterrupted since 1925 except in the depression and war years—continued in 1953 (table 1). There were more of these associations, and they had more members. Assets, earnings, paid-in share cap-

^{*} Prepared in the Bureau of Federal Credit Unions.

² Fiscal year ended June 30.

Data not available.

ital, loans, and reserves were all up from the totals of the preceding year.

Credit unions chartered under State law numbered 6,362 in 1952 and 7,096 in 1953. The net increase of 12 percent was substantially greater than that of the preceding year (8 percent). At the end of the year membership in these associations totaled 3.4 million—345,000 more than at the end of 1952. The increase for this one year was only slightly less than the total membership of all credit unions in the United States 20 years earlier.

Loans outstanding to members, which had totaled \$570.0 million at the end of 1952, increased 29 percent to \$733.5 million. The growth of \$159.3 million in paid-in share capital brought the total from \$711.1 million to \$870.4 million. Reserves increased nearly \$10 million during the year

and amounted to \$48.9 million on December 31, 1953.

The total assets of all State-chartered credit unions passed the billion dollar mark during 1953 and at the end of the year amounted to \$1,040.9 million—\$187.2 million or 22 percent more than a year earlier. The reporting credit unions had average assets of \$148,900 on December 31, 1953; at the end of 1952 the average had been \$134,900.

An increase of \$10.2 million or 40 percent in the associations' net earnings for the year brought the total to \$36.2 million. The amount of dividends paid to shareholders was 33.2 percent greater than in 1952—\$24.7 million compared with \$18.5 million.

State Ranking

A ranking of the States according

to the number of State-chartered credit unions and assets held by them showed the same six States in the lead at the end of 1953 as in other recent years. Illinois was first both in number (1,125) and in total assets (\$159.7 million). Wisconsin was second in number of operating units, with 623, followed by Massachusetts with 463, California with 365, Ohio with 356, and Michigan with 253.

The Massachusetts associations had the second highest amount in total assets — \$110.9 million. Wisconsin ranked third with \$85.8 million and was followed by Michigan with \$78.0 million, California with \$74.7 million, and Ohio with \$63.0 million.

Forty-four percent of all credit unions operating under State charter were located in these six States. They had 51 percent of the total member-

See footnotes at end of table.

ship, 53 percent of all loans outstanding, and 55 percent of the total assets.

While Michigan ranked fourth in total assets held by the State-chartered associations, it was first in terms of average assets per credit union. The average assets of \$346,000 held by the credit unions in that State were more than \$100,000 greater than the average in Massachusetts, the State with the second highest average.

Real Estate Loans

Thirteen of the reporting States indicated that, while real estate loans were permitted, the credit unions were not required to segregate such loans in their year-end reports. The 25 States that showed their real estate loans separately are listed in table 2. They had loans totaling

\$507.2 million outstanding at the end of 1953, and of this amount \$135.8 million or 27 percent represented real estate loans. Twelve States reported, in addition, the amount of real estate loans granted by the credit unions during the year. Of the \$217.2 million in total loans that the associations in these States granted, \$22.5 million or 10.5 percent consisted of real estate loans. As in 1952, Massachusetts had the largest amount of real estate loans outstanding at the end of 1953 (\$29.3 million), and Wisconsin was second (\$24.6 million).

Available data on real estate loans made by State-chartered credit unions are insufficient at this time to warrant any general conclusions as to total volume or trends. It seems clear. however, that in the States that reported such data, longer periods before maturity are allowed on real estate loans, on the average, than on loans of other types. Where State laws are silent on real estate lending by credit unions, the amount of such lending is determined primarily by the limitations on loan maturities. Of the eight States that reported on the amount of real estate loans made during both 1952 and 1953, half had decreases in the latter year and half had increases. The greatest decline (\$359,530) was reported by Colorado; the largest growth (\$825,618) occurred in Minnesota.

Federal and State Credit Unions

The Federal Credit Union Act was patterned, in general, after the State laws in existence at the time it was

adopted. The basic purposes of the two kinds of credit unions are, of course, essentially the same. In most States, therefore, a group interested in the organization of a credit union can make a choice based on relatively minor differences in the State and Federal laws.

Table 4 presents a comparative

summary of selected data pertaining to Federal and State-chartered credit unions at the end of 1953.² The combination of the data for the two types of association gives a clearer picture than is otherwise possible of the progress of the whole credit union movement. As the table shows, at the end of 1953 more than 13,000 credit unions were in operation in the United States; they had about 6.6 million members and total assets of more than \$1.9 billion. These totals all represent advances from the totals in 1952, when there were more than 12,000 credit unions in operation that had slightly less than 6.0 million members and total assets of a little over \$1.5 billion.

California, with a total of \$186.5 million, led all other States in the amount of assets held by Federal and State-chartered credit unions; Illinois was second with \$181.8 million; and Michigan was third with \$144.1 million.

Notes and Brief Reports

Federal Unemployment Insurance Legislation, 1954*

In 1954 Congress passed, and President Eisenhower approved, legislation extending the coverage of the unemployment insurance system to about 3.7 million workers and 270,000 employers. The new law provided the first significant change in the coverage provisions of the Federal Unemployment Tax Act during the 19 years since that law was adopted. A change in the provisions for financing the administration of the unemployment insurance system and a revision of the District of Columbia law were also enacted during the second session of the Eighty-third Congress.

Public Law No. 567.—The first of these three laws to receive Presidential approval was Public Law No. 567, the "Employment Security Administrative Financing Act of 1954," which was signed on August 5, 1954. This law provides that, beginning with the fiscal year ended June 30, 1954, the excess of collections from the Federal

unemployment tax over employment security administrative expenses is to be used to establish and maintain a reserve of \$200 million in the Federal unemployment account. This reserve is to be available for loans to States with depleted reserve accounts, to assist them in the financing of their unemployment benefit payments; the loans are to be repaid, without interest. Any amount in excess of the \$200 million is to be returned to the States, to be used for benefit payments or administrative expenses.

The provision makes possible greater assurance of the solvency of benefit funds. Federal unemployment tax collections will be used only for employment security purposes. The reserve of \$200 million that is to be built up and maintained will enable States whose payment funds fall to dangerously low levels to obtain loans. Any excess funds in addition to those needed to maintain the loan fund are to be allocated to the State accounts (in the Federal unemployment trust fund) in the proportion that their taxable payrolls bear to the aggregate taxable payrolls of all States. The amounts thus allocated are to be used for benefit payments or, under specified conditions, to supplement the funds granted to the States for administrative expenditures. Congress will continue to appropriate funds annually to finance the administrative expenditures of the Federal-State employment security program.

The act thus makes permanent the earlier temporary measures for Federal financial assistance to States. It replaces legislation, enacted in 1944 and amended in subsequent years, that provided for a special account in the Federal unemployment trust fund. The excess of Federal unemployment tax collections over appropriations for employment security administration could be appropriated to this account, and from it loans—repayable but not bearing interest—could be made to States whose unemployment reserve funds were near exhaustion.

Under the new law, any State whose reserve account on the last day of any quarter is less than the amount of benefits paid in the 12 months ending on that day is eligible for a loan. The maximum amount that a State may borrow in any quarter is the largest amount of benefits paid by it in any one of the four preceding quarters. The loan is to be repaid either by a transfer of funds from the State's trust account to the Federal unemployment account or by a reduction in the allowable credit of 90 percent against the 3-percent Federal tax.

² For the most recent data on Federal credit unions see *Report of Federal Credit Union Operations for 1953* (Bureau of Federal Credit Unions, 1954).

^{*} Prepared in the Department of Labor, Bureau of Employment Security, Division of Program Policy and Legislation.
