

Chart 2.—Estimated savings¹ in number of orphans under age 18 in 1953 resulting from improvement in mortality from 1920 to 1953

¹ Estimated total number of children who would have been orphans in 1953, if children under age 18 in 1953 had been

subject to the same risks of orphanhood as children under age 18 in 1920, is represented by the full length of each bar.

by the Division of the Actuary to estimate the remaining number of orphans under age 18—that is, the number of white orphans aged 17 in 1920 and aged 16 and 17 in 1930 and the total number of nonwhite orphans under age 18 at each date.

The two most recent estimates are probably more accurate than the early ones because mortality rates by age, race, and sex were available and applied for each of the 18 years required, and the figures were then adjusted to reflect marital-status mortality rates. An allowance was also made for paternal orphans created by deaths of fathers in the Armed Forces overseas, since the population mortality rates do not reflect such deaths.

Because mortality rates are somewhat lower for married persons than for all persons of the same age, sex, and race, the estimates of 1920, 1930, and 1940, which made no allowance for this factor, overestimate somewhat the number of orphans. Information on death rates by marital status was first developed on a nationwide basis from the 1940 Census and became available in 1945.

The estimates for full orphans in 1920, 1930, and 1940 incorporated an upward adjustment, based on 1921 data for England and Wales, to take account of the fact that the death of the father and mother are not independent events. On the ground that data of this type are not available for the United States and, more

important, that mortality from infectious diseases, especially from tuberculosis, has dropped sharply in recent decades, the 1949 and 1954 estimates for full orphans in table 1 do not incorporate such an allowance. If the full adjustment based on the 1921 foreign data were applied, the estimated number of full orphans in 1949, for example, would be 140,000 instead of 80,000. Without doubt, an estimate so inflated would exaggerate the number of full orphans in the United States under the health conditions of recent years. On the other hand, future estimates of their number could well incorporate the higher mortality rates of the widowed surviving parent, if more reliable data on the mortality of widowed persons are developed.

Proposed Social Security Budget² for 1955-56

On January 17, 1955, President Eisenhower submitted to Congress the Budget of the United States Government for the fiscal year ending June 30, 1956. Budgetary expenditures for the year are estimated at a total of \$62.4 billion, of which 65 percent, or \$40.5 billion, is requested for major national security programs.

In the budget for the Social Security Administration, appropriations are recommended for all existing programs and, in addition, for separate grants for medical care for public assistance recipients and a special program to combat juvenile delinquency. On January 31, the President sent to Congress a separate health message, as reported in this issue of the BULLETIN. The proposed legislation, if enacted, will require budget expenditures in 1955-56 of approximately \$37 million, of which \$20 million is for the part-year cost of a program of grants-in-aid for medical care for public assistance recipients, \$3 million is for improvement and extension of grants for maternal and child health and welfare services, and \$3 million is for the special program to combat juvenile delinquency.

Expenditures of the Social Security Administration are estimated at

Table 1.—Expenditures for the Social Security Administration from general funds, 1953-54, 1954-55, and 1955-56

[In thousands]

Bureau and Item	1953-54, actual	Estimated	
		1954-55	1955-56
Total, including proposed legislation.....	\$1,470,105	\$1,478,198	\$1,459,551
Total, excluding proposed legislation.....	1,470,105	1,478,198	1,433,551
Bureau of Public Assistance:			
Existing legislation	1,439,041	1,208,438	1,401,589
Existing legislation, supplemental appropriation.....		238,000	
Proposed legislation.....			20,000
Children's Bureau:			
Existing legislation	30,906	31,590	31,782
Proposed legislation			6,000
Office of Commissioner, salaries and expenses ¹	158	170	180

¹ Includes reimbursements from the old-age and survivors insurance trust fund.
Source: *The Budget of the United States Government for the Fiscal Year Ending June 30, 1956.*

\$1,460 million for the fiscal year 1955-56, excluding operations of the old-age and survivors insurance trust fund and of the Bureau of Federal Credit Unions. Of this sum, the Budget calls for \$1,434 million under present budget authorizations and \$26 million in new authorizations proposed for new legislation (table 1).

The total estimated expenditures for the Social Security Administration for 1955-56, including the \$26 million under proposed legislation, are \$19 million less than total estimated expenditures for 1954-55, which include a supplemental appropriation of \$238 million for public assistance grants. They are \$11 million less than the total spent in 1953-54. The 1955-56 estimates are based on assumptions that the number of recipients of old-age assistance and of aid to dependent children will decline in that year and that there will be a slight rise in the number of persons receiving aid to the blind and an increase of somewhat more than 10 percent in the number who will receive aid to the permanently and totally disabled. A drop in average monthly payments under all four of the federally aided assistance programs also has been assumed.

Grants to the States account for

\$1,456 million or 99.7 percent of the total social security budget, as shown below.

	1955-56 estimated (in millions)
Categorical public assistance	\$1,400
Medical care to public assistance recipients (proposed legislation)	20
Maternal and child health and child welfare:	
Existing legislation	30
Proposed legislation	3
Juvenile delinquency (proposed legislation)	3

The remaining 0.3 percent (\$3.5 million) is divided among the Bureau of the Social Security Administration and the Office of the Commissioner for salaries and operating expenses.
