arately from money payments to recipients, in amounts up to an average of $6 per adult recipient ($3 in Federal funds) and $3 per child recipient ($1.50 in Federal funds). In an effort to obtain the maximum amount possible under the revised formula, some States changed their procedure for paying for one or more types of care. Other States made payments to vendors of medical care for the first time in one or more categories. In 1957-58, all but nine States used vendor payments in one or more programs. About the same proportion of States—roughly 7 out of every 10—made vendor payments under each program; in earlier years far more States had made such payments from general assistance funds than from funds of any one of the other programs.

The increase from 1956-57 to 1957-58 in total per inhabitant expenditures for payments to vendors of medical care probably would have been greater than it was if the Federal provisions for sharing in such payments had not been changed. Some States making vendor payments substantially higher than the new average maximums shifted from vendor payments to money payments for some types of medical care in order to obtain the maximum possible Federal funds. In addition, in 1957-58, the Commissioner of Social Security approved a policy that permitted States to “split” the cost of nursing- and convalescent-home care between a money payment to the recipient for his ordinary living expenses in the home and a payment to the operator of the home for medical needs; formerly, the full cost of such care was in the form of a single vendor payment to the operator of the home.

Among programs, the largest per capita expenditures for vendor payments were from old-age assistance and general assistance funds (table 4). Expenditures from old-age assistance funds amounted to 92 cents, or half the per inhabitant for all categories combined. Although the per capita expenditure (48 cents) from general assistance funds was much smaller, it accounted for one-fourth of total general assistance payments. In contrast, vendor payments for medical care constituted only about 8 percent of total assistance payments for the four special types of public assistance combined. An unknown, though substantial, amount of vendor payments from general assistance funds, however, was spent on behalf of recipients of the special types of public assistance. At least 11 percent of total vendor payments from general assistance went for medical care for recipients under the special programs.

Under each assistance program, per capita expenditures for vendor payments for medical care were small in relation to total expenditures in most States. Vendor payments amounted to less than 50 cents per inhabitant in three-tenths of the States making such payments under old-age assistance, in three-fourths of the States under aid to dependent children, in almost half the States under general assistance, in all the States under aid to the blind, and almost all the States under aid to the permanently and totally disabled. Vendor payments amounted to as much as $2 or more in seven States under old-age assistance, and in 23 States under all programs combined.

Blue Cross Provisions for Aged Persons, Late 1958*

An estimated 6 million persons aged 65 and over—about 40 percent of the population in this age group—have hospitalization insurance. The 79 Blue Cross plans in the continental United States' estimate that their enrollment includes about 3.5 million persons who have passed their sixty-fifth birthday. Approximately 400,000 aged persons are enrolled in independent plans. The others—at least 2 million persons—have only insurance company policies. Some persons who are members of Blue Cross or independent plans also have insurance company policies.

Blue Cross plans are thus the major source of prepaid protection against the costs of hospital care among the population aged 65 and over. As the ratio of their aged members to younger members has increased, Blue Cross plans have developed a variety of ways of coping with the problem of the impact of the relatively higher costs on the older segment of their enrollment. Blue Cross membership has been obtained by aged persons in one of four ways, listed in the order of their numerical importance: (1) “left-employ” (“left-group” or “group conversion”) contracts, (2) nongroup contracts, (3) group contracts covering aged persons still at work, and (4) group contracts that include retired as well as active employees. Wives are generally included under their husband’s contract as dependents, and widows are permitted to continue their membership in Blue Cross plans on a group conversion or nongroup basis after their husband’s death.

Most of those in the higher ages who are enrolled in Blue Cross plans originally obtained their membership through their place of work. On retiring they converted their coverage into a “left-employ” contract, which

---

* Prepared by Agnes W. Brewster and Ruth Bloodgood, Division of Program Research, Office of the Commissioner. Data were developed from plan summaries in the Blue Cross Guide, January 1958, and revisions reported by the Blue Cross Association in December 1958.

1 Data exclude the Puerto Rico Blue Cross plan; Canadian plans have also been omitted.
continued their protection and that of their wives and any young children. Increasingly, however, Blue Cross is writing group contracts that permit the employee to continue his membership after retirement without change in the type of coverage. Since 52 of the Blue Cross plans place no age limits on group enrollment (table 1), some persons have actually first become members of Blue Cross groups, paying group premium rates, after reaching age 65.

Seventy-four Blue Cross plans permit nongroup enrollment, and five do not. Forty-seven of the plans permit nongroup enrollment at any time; eight of these also conduct periodic community enrollment drives in less densely populated areas. The remaining 27 plans periodically open their enrollment for stated periods to persons who are not members of groups. Some of the existing coverage of the aged in Blue Cross plans is derived from a nongroup contract obtained before the age limit on nongroup coverage was enforceable; membership was then continued after age 65 had been reached.

Table 1 shows the upper age limits in effect in the 79 Blue Cross plans, both on a nongroup and on a group basis. Fifty-two plans have no age limits on group enrollment, and 11 of these plans also enroll nongroup members regardless of age. In the remaining plans, the most usual limit is age 65 for both group and nongroup enrollments, although 13 plans have lower age limits for nongroup enrollment and five have higher ones.

In the past 4 years the age limits on nongroup enrollment have been lifted entirely by two plans, lowered by one plan, and raised by three. Some liberalization has also occurred with respect to group enrollment.

Among the 74 plans allowing nongroup enrollment, 61 require that a health certificate be submitted with the enrollment application and 11 do not. There was no information on this point for two plans. The health certificate may cause rejection of the application, or it may form the basis for identifying preexisting conditions for which benefits are not immediately provided.

Forty-seven plans provide coverage for preexisting conditions after waiting periods that vary in length, 19 provide no coverage in such instances, and three cover preexisting conditions immediately. Information was not clear on this point for three of the plans. The benefits under nongroup contracts, although in general fairly similar to those available under "left-employ" contracts, are more limited in a few plans. The main difference is in connection with preexisting conditions, which are not subject to restrictions in "left-employ" contracts.

Table 2 and 3 list the types of benefits available to "left-employ" members of Blue Cross plans and hence to the majority of their members who are aged 65 or over. As the tables show, the number of basic or "full" benefit days provided by the 79 plans varies from 21 in 13 plans to 365 in one plan.

That the number of basic benefit days does not give the complete story is evident in table 2. Twenty-three plans offer additional days of partial benefits after the member has exhausted his days of full benefits. Plans offering relatively few days of full benefits are likely to provide additional days of partial benefits. The partial benefit may take the form of 50 percent of the full benefit, for a specified number of days; this arrangement is usual when the full benefit relates to semiprivate or ward accommodations. When the basic benefit is in terms of a dollar amount per day the partial benefit is frequently expressed in dollars; even when so expressed, it may also equal 50 percent of the basic benefit.

In addition to the plan providing 365 days of benefits, two other plans afford benefits covering an entire year when the full and the partial benefit days are combined. Four other plans cover stays of more than 6 months in the hospital.

In table 3, the extent to which the basic benefit offsets the cost of the room occupied by the member patient is analyzed. Forty-two plans provide a full "service benefit," when the patient occupies the type of room specified—a semiprivate bed in 30 plans, a ward bed in 12 plans. The remaining 37 plans allow a set dollar amount of credit toward the cost of the room. In some localities and in some hospitals, this allowance equals or exceeds the charge for a semiprivate room. In others it is undoubtedly less than the cost of such accommodations, and an element of coinsurance is thus introduced for each day the patient is hospitalized.

Plans allowing a semiprivate room

1 Includes several plans with an age limit of 65 for initial enrollment of dependents or sponsored dependents.
2 When 100 percent of a group is initially enrolled, persons aged 60-65 are accepted.
3 The 60-year age limit applies only to groups of 10 or less in 2 plans (no age limit for larger groups) and in 1 plan does not apply if the employer contributes to the premium.
benefit vary in their practices if the patient occupies a private room. In some plans the patient is credited with the value of the semiprivate room, and in others he is credited with a stated dollar amount. In Washington, D. C., for example, where the charge for semiprivate rooms averages $18.00-$18.50 a day, until recently a patient received a credit of only $10.00 a day toward the cost of a private room, which might cost as much as $23.00 a day. Now he receives a credit equal to the semiprivate room rate.

The rising cost of hospital room and board charges has been reflected in a substantial upward movement among the plans in the dollar amounts of credit toward these charges, as indicated below.

By the fall of 1958, five more plans than in 1956 were granting no additional days of partial benefits—an increase more than compensated for by a considerable rise in the number of plans with generous length-of-stay benefits. Thirty-eight plans—compared with 32 in 1956—allow 60 or more days of basic benefits, and one of the 38 covers 355 days in semiprivate accommodations.

In the period since January 1956, when the Division of Program Research last prepared a detailed analysis of Blue Cross provisions for “left-employ” coverage, it has apparently been some reduction in the benefits available to older plan members. Only 30 plans in 1958, for example, compared with 38 in 1956, offered a semiprivate room basic benefit; 12 plans in 1958 and seven in 1956 had a ward benefit.

How do the benefits available to “left-employ” members in late 1958 compare with the benefits available under the group contracts held by 79 plans there is now less in benefits under the “left-employ” contracts except when the member had formerly been enrolled in one of these contracts rather than in the standard or most-widely-held group contract. In the remaining 22 plans, some reduction in benefits is made in converting from group to “left-employ” membership. The most frequent type of benefit reduction is in the number of basic days of hospital care. A few plans provide for a lower rate of daily room allowances, others reduce only the basic days of benefit, and still others reduce only the room allowance. In a few plans, the days of additional partial benefits provided to group members are not available under “left-employ” contracts. During 1958 two plans increased the number of basic benefit days for group enrollment, with the same increase applicable to “left-employ” certificates.

The variations in actual benefits among the plans and the changes in benefits that occur in some plans when converting from group to “left-employ” coverage explain the differences in premiums among group, “left-employ,” and nongroup members of Blue Cross plans. Table 4 gives the annual premiums under the three types of contracts both for a one-person contract and for a family contract and shows medians and ranges. Table 5 indicates the difference in the annual cost of “left-employ” contracts and group contracts, separately for plans maintaining the same benefit schedule for both types of contract and for plans reducing benefits for those no longer members of a group.

The median premium for a family is $73 under a group contract and $85 under a “left-employ” contract. The range is wider under “left-employ” contracts—from $51 to $203 a year—than under group contracts—from $44 to $163. On a monthly basis, the additional cost of the “left-employ” contract can be nothing or nearly $10, depending on the plan. If benefits were not available under the group contracts, the additional cost of the “left-employ” contract would be a maximum of $10.40 a month. The same is true if the premium were $73 and the additional cost of the “left-employ” contract was $10.40 a month. The same is true if the premium were $73 and the additional cost of the “left-employ” contract was $10.40 a month.

2 Credits range from $12 a day (7 plans) to $20 a day (1 plan).

4 Days of benefit in first year of membership; number increased for additional years of membership.

5 $11.50 limit.

6 $14.00 limit.
child welfare, the Board of the United
Nations Children’s Fund (UNICEF)
at its March meeting approved a plan
for aid to children’s institutions and
day-care centers.

In response to a resolution intro-
duced by the United States Dele-
gation in March 1958, a study was un-
tertaken of the possibility of UNICEF
aid in this field. A UNICEF staff
member, acting as special consultant
to the United Nations Bureau of So-
cial Affairs, visited a number of coun-
tries and developed a report that
formed the basis for the proposed
program. The World Health Organ-
ization supplemented this analysis
with a special report on the health
aspects.

The main report was strongly sup-
ported at the Board meeting as being
sound both in its general philosophy
and in the specific principles that it
established. Designed to serve as a
basis for planning child welfare proj-
ects suitable for submission for
UNICEF aid, it should also serve as
a valuable resource to countries in-
terested in evaluating existing serv-
ices to children and planning for
their improvement.

The report stresses the importance
of training for all levels of workers—
a recommendation heartily endorsed
by the Board. Services that reach the
most vulnerable age groups—infants
and young children—are high on the
priority list, as are the preventive
services, such as day care, which
might enable children to live in their
own homes. While recognizing that
institutional care is not ideal for chil-
dren deprived of home life, the Board
also recognized that in many coun-
tries institutions will need to be used
for many years to come. Improve-
ment of existing institutions and
stimulation of planning for services
that strengthen home life are the
aims of the program. As the report
states, “aid would not be justified un-
less it were conceived of as a begin-
ning toward a broader and more
fundamental objective, namely that
of aiding countries develop well-
organized national systems of social
services which would help preserve
and strengthen family life, and foster
opportunities for the healthy growth
of the personality, abilities, and social
habits of the child."

Just as UNICEF relies on the World
Health Organization and the Food
and Agriculture Organization for
technical advice in areas of their
competence, so it will receive techni-
cal advice on this new program from
the Bureau of Social Affairs. Though
the sum allotted for the first year is
small—$135,000—the development of
even a few sound projects will require
the full-time services of a competent
child welfare worker in the Bureau.
UNICEF is authorized to assist in
paying such a staff member until the
Bureau of Social Affairs can incorpo-
rate the position in its budget.

Which countries will wish to have
assistance for projects in this field
and what the projects will be like is
unknown. The program will be
watched with interest, however, as
the first excursion of UNICEF outside
the field of health.

This departure into the field of
child welfare is renewed evidence of
the dynamic quality of UNICEF’s
program. Initiated in 1946 to meet
emergency needs for food and cloth-
ing of children in war-torn countries,
UNICEF has changed and continues
to change to meet new challenges.
By resolution of the United Nations
General Assembly in December 1950,
UNICEF shed its exclusively tempo-
rary character and was directed to
use its resources “for the purpose of
meeting, through the provision of
supplies, training, and advice, emer-
r acy and long-range needs of chil-
dren and their continuing needs, par-
icularly in under-developed coun-
tries.”

Taking a broad view of the “needs
of children,” UNICEF has developed
in the short space of 8 years an im-
aginative and flexible program for
stimulating and assisting countries to
meet those needs. A narrow approach
might have limited aid to the tradi-
tional field of maternal and child
health as conceived in a Western
country where other categorical pro-
grams provide other segments of
service. The planners, however, with
a clear awareness of the needs of
children around the world, have built
