

TECHNICAL NOTE

Estimates of coverage, contributions, and benefits are based for the most part on reports by private insurance companies and other non-government agencies. Many of the reports include data for persons who are no longer currently employed as wage and salary workers because of retirement, temporary layoff, sickness, or shift in jobs. No attempt has been made to adjust the data for any overstatement that might result from their inclusion. The coverage estimates for pension plans, which have been adjusted to eliminate annuitants, provide the one exception.

Contributions under insured pension plans are on a net basis, with dividends and refunds deducted. Those under noninsured plans are, for the most part, on a gross basis, and refunds appear as benefit payments. For pay-as-you-go (unfunded) plans, contributions have been assumed to equal benefit payments. Estimates of per capita contributions are derived by dividing total annual

contributions by the average number of employees covered during the year.

The number of beneficiaries under pension plans relates to those receiving periodic payments at the end of the year and thus excludes those who received lump sums during the year. The retirement benefits under noninsured plans do include (1) refunds of employee contributions to individuals who withdraw from the plans before retirement and before accumulating vested deferred rights, (2) payments of the excess of employee contributions to survivors of pensioners who die before they receive in retirement benefits an amount equal to their contributions, and (3) lump-sum payments made under deferred profit-sharing plans. Because the source of the data from which the estimates have been developed does not permit distinction between these lump-sum benefits and the amounts representing monthly retirement benefits, precise data on average monthly or annual retirement benefit amounts cannot be derived.

Notes and Brief Reports

Aged Persons Receiving Both OASDI and OAA, Early 1967*

In order to effectively plan and evaluate old-age, survivors, disability, and health insurance (OASDHI) and public assistance programs and assess their changing relationship to each other, it is essential to have comprehensive data on aged persons who receive money payments from both programs concurrently. The latest report from the Assistance Payments Administration of the Social and Rehabilitation Service indicates that more than half those receiving old-age assistance (OAA) under State-Federal public assistance programs in February 1967 also received cash insurance benefits under OASDHI in that month.

*Data from tabular release on *Concurrent Receipt of Public Assistance Money Payments and Old-Age, Survivors, and Disability Insurance Cash Benefits by Persons Aged 65 or Over, 1948-67 and February 1967* (Social and Rehabilitation Service, Assistance Payments Administration), 1967.

These data have been gathered annually from the States since 1948 and include figures on the incidence of concurrent receipt and the amount of such monthly payments from the insurance and assistance programs. The most recent information presented here was taken from reports for February 1967 submitted by State public assistance agencies administering or supervising the administration of approved plans for old-age assistance.¹ They do not include recipients of medical assistance for the aged as they have in some previous years.

Early in 1967 more than 1 million persons aged 65 or over were receiving monthly income-maintenance payments both under old-age assistance and under old-age, survivors, disability, and health insurance. Persons getting both types of payments were only slightly more numerous than they had been in February 1966 and they repre-

¹For the most recent analysis of comparable information, see "Concurrent Receipt of Public Assistance and Old-Age, Survivors, and Disability Insurance by Persons Aged 65 and Over, Early 1963," *Welfare in Review* (Welfare Administration), March 1964.

than 50 percent of all persons receiving old-age assistance.

The average monthly OASI benefit going to persons getting both types of payments in February 1967 was \$52.95, and their average OAA money payment was \$56.75. For those receiving only an OAA payment, the average amount was \$80.30 (table 2).
