

Social Security

ANNUAL STATISTICAL REPORT ON THE SOCIAL SECURITY DISABILITY INSURANCE PROGRAM, 2025

Social Security Administration
250 E Street SW, 8th Floor
Washington, DC 20254

SSA Publication No. 13-11826
Produced and published at U.S. taxpayer expense

Released: October 2026

Highlights

Size and Scope of the Social Security Disability Insurance Program, 2025

In December:

- Disability benefits were paid to more than 8.5 million disabled beneficiaries (disabled workers, disabled widow(er)s, and disabled adult children).
- Payments to disabled beneficiaries totaled almost \$13.2 billion.
- About one out of eight disabled beneficiaries aged 18–64 also received Supplemental Security Income payments.

Across the year:

- Awards to disabled workers (633,307) accounted for 85 percent of awards to all disabled beneficiaries (745,396).
- Benefits were terminated for 762,526 disabled workers.

Profile of Disabled-Worker Beneficiaries, December 2025

- Workers accounted for the largest share of disabled beneficiaries (83 percent).
- Average age was 56.
- The largest diagnosis category was diseases of the musculoskeletal system and connective tissue (34.2 percent).
- Average monthly benefit received was \$1,633.19.
- About one out of 11 disabled workers aged 18–64 also received Supplemental Security Income payments.

Errata Policy

Any corrections to the statistics in this report will be posted as errata at https://www.ssa.gov/policy/docs/statcomps/di_asr/2025/index.html.

Preface

Since 1956, the Social Security program has provided cash benefits to people with disabilities. This annual report provides program and demographic information about the people who receive those benefits. The basic topics covered are—

- beneficiaries in current-payment status;
- workers' compensation and public disability benefits;
- benefits awarded, withheld, and terminated;
- disabled workers who have returned to work;
- outcomes of applications for disability benefits; and
- disabled beneficiaries receiving Social Security, Supplemental Security Income, or both.

With this edition, program descriptions formerly covered in a Background section have been incorporated into the standalone [Old-Age, Survivors, and Disability Insurance Program Reference for Statistical Publications](#).

Your suggestions and comments on this report are welcome and should be directed to statistics@ssa.gov. This and other statistical reports on the Social Security and Supplemental Security Income programs are available at <https://www.ssa.gov/policy>.

Notes

The Old-Age and Survivors Insurance (OASI) program provides benefits to retired workers and their dependent family members and to survivors of deceased workers. The Disability Insurance (DI) program provides benefits to disabled workers, their spouses, and children (whether or not disabled).

Benefits are paid from the OASI and DI Trust Funds. However, not all disabled beneficiaries are paid from the DI Trust Fund. All disabled widow(er)s' and most disabled adult children's benefits are paid from the OASI Trust Fund. Persons receiving disability benefits from either trust fund are referred to in this report as Social Security beneficiaries.

Statistics for 2001 and subsequent years presented in these tables may differ slightly from other published statistics for three reasons. First, all statistics for those years are based on 100 percent data files. Second, beginning in 2001, the definition of an award was changed to include secondary benefit awards, subsequent periods of disability, and conversions from one class of child's benefit to another and to exclude reinstated benefits. Those changes resulted in a slight increase in the award counts. Third, statistics for 2006–2011 omit individuals whose benefits were reinstated under the Expedited Reinstatement provisions. For those reasons, as well as for differences in data sources and calculation methods, statistics reported in these tables may also differ from those reported by Actuarial Services.

Beginning with the 2020 edition, some of the mental disorder diagnostic groups were renamed:

<u>Former name</u>	<u>New name</u>
Autistic disorders	Autism spectrum disorders
Developmental disorders	(Unchanged)
Childhood and adolescent disorders not elsewhere classified	(Unchanged)
Intellectual disability	Intellectual disorders
Mood disorders	Depressive, bipolar, and related disorders
Organic mental disorders	Neurocognitive disorders
Schizophrenic and other psychotic disorders	Schizophrenia spectrum and other psychotic disorders
Other mental disorders	(Unchanged)

Also beginning with the 2020 edition, attention deficit/hyperactivity disorder (ADHD) diagnoses were reallocated from the "childhood and adolescent disorders not elsewhere classified" group to the "other mental disorders" group to reflect the agency's adoption of an ADHD diagnostic code for both children and adults.

All years are calendar years unless otherwise specified.

Because some values in this report are independently rounded, the sum of components may not equal reported totals, and percentage distributions may not total 100.

Glossary: <https://www.ssa.gov/policy/about/glossary.html>

BENEFICIARIES IN CURRENT- PAYMENT STATUS

Chart 1.**All Social Security disabled beneficiaries in current-payment status, December 2025**

In December 2025, there were 8,536,668 people receiving Social Security disability benefits as disabled workers, disabled widow(er)s, or disabled adult children. The majority (83.5 percent) were disabled workers, 14.3 percent were disabled adult children, and 2.2 percent were disabled widow(er)s.

SOURCE: Table 3.

Chart 2.

All Social Security disabled beneficiaries in current-payment status, December 1970–2025

The number of disabled beneficiaries has risen from 1,812,786 in 1970 to 8,536,668 in 2025, driven predominately by an increase in the number of disabled workers. The number of disabled adult children has grown slightly, and the number of disabled widow(er)s has remained fairly level. In December 2025, there were 7,125,880 disabled workers; 1,219,940 disabled adult children; and 190,848 disabled widow(er)s receiving disability benefits.

SOURCE: Table 3.

Chart 3.**Disabled beneficiaries aged 18–64 in current-payment status as a percentage of state population aged 18–64, December 2025**

Disabled beneficiaries aged 18–64 in current-payment status accounted for 3.5 percent of the population aged 18–64 in the United States. In eleven states and the District of Columbia, they represented less than 3 percent of the state (or district) population. The states with the highest rates of disabled beneficiaries—6 percent or more—were Alabama, Arkansas, Kentucky, Mississippi, and West Virginia.

SOURCE: Table 8.

Chart 4.

Age of disabled-worker beneficiaries in current-payment status, by sex, December 2025

The percentage of disabled-worker beneficiaries increases with age for both men and women. In December 2025, the largest percentage of disabled-worker beneficiaries was aged 60–64. Disability benefits convert to retirement benefits when the worker reaches full retirement age (65–67, depending on the year of birth).

SOURCE: Table 4.

NOTE: FRA = full retirement age.

Chart 5.**Average monthly benefit of disabled beneficiaries in current-payment status, by sex, December 2025**

The average monthly benefit for disabled-worker beneficiaries is higher than that paid to disabled widow(er)s or disabled adult children. The reason for the difference is that disabled workers receive 100 percent of the primary insurance amount (PIA), compared with 71.5 percent for disabled widow(er)s and 50 percent for disabled adult children (if the worker is disabled or retired) or 75 percent (if the worker is deceased).

Because men have traditionally had higher earnings than women, their monthly benefit is higher. This is most obvious in the disabled-worker group. Benefits for disabled widow(er)s and disabled adult children are dependents' benefits, so their monthly benefit is a function of the worker's earnings. Therefore, a disabled widow's average benefit tends to be higher than that of a disabled widower because average earnings are higher for male workers than for female workers. Benefit amounts are about the same for men and women in the disabled adult children group.

SOURCE: Table 4.

Chart 6.

Disabled beneficiaries in current-payment status, by diagnostic group, December 2025

The impairment on which disability is based varies with the type of beneficiary. In December 2025, diseases of the musculoskeletal system and connective tissue were the primary reason disabled workers and disabled widow(er)s received benefits; intellectual disorders was the predominant reason for disability among disabled adult children.

SOURCES: Social Security Administration, Master Beneficiary Record, 100 percent data; and U.S. Postal Service geographic data.

NOTES: The diagnosis for disabled adult children typically was not recorded on the Master Beneficiary Record until 1984. Many beneficiaries entitled before that date are still on the rolls today.

(X) = suppressed to avoid disclosing information about particular individuals.

a. Statistics for individual mental disorder diagnostic groups are shown separately in Table 10.A.

SOURCE: Social Security Administration, Master Beneficiary Record, 100 percent data.

NOTES: The average monthly benefit includes secondary benefit amounts for some beneficiaries who are dually entitled. This results in the average monthly benefit being larger than the average PIA for some age groups.

FRA = full retirement age.

BENEFICIARIES WHO HAVE FILED FOR WORKERS' COMPENSATION OR PUBLIC DISABILITY BENEFITS

Notes

In December 2025, approximately 337,000 disabled workers on the Social Security Disability Insurance program had filed for workers' compensation or public disability benefits. Disability payments from private sources, such as private pension or insurance benefits, do not affect Social Security disability benefits, but workers' compensation and other public disability benefits may reduce them. Workers' compensation is paid to a worker because of a job-related injury or illness. It may be paid by federal or state workers' compensation agencies or employers or by insurance companies on behalf of employers.

Other public disability benefits that may affect Social Security disability benefits are those paid by a federal, state, or local government for disabling medical conditions that are not job related. Examples are civil service disability benefits, military disability benefits, state temporary disability benefits, and state or local government retirement benefits that are based on disability. Persons who receive Social Security disability benefits and one of the following types of public benefits will not have their Social Security disability benefit reduced:

- Veterans Administration benefits;
- State and local government benefits, if Social Security taxes were deducted from earnings; or
- Supplemental Security Income.

The total amount received from workers' compensation or other public disability benefits and Social Security disability benefits cannot exceed 80 percent of the worker's average current earnings before he or she became disabled. The monthly Social Security disability benefit includes benefits payable to family members. If the total amount of these benefits exceeds 80 percent of average current earnings, the excess amount is deducted from the Social Security benefit. The benefit is reduced until the month the worker reaches full retirement age or the month the other benefits stop, whichever comes first.

Example

Before becoming disabled, the worker's average current earnings were \$4,000 a month. The disabled worker, his or her spouse, and their two children would be eligible to receive a total of \$2,200 a month in Social Security disability benefits. However, the disabled worker also receives \$2,000 a month from workers' compensation. Because the total amount of benefits received (\$4,200) is more than \$3,200 (80 percent of average current earnings), the family's Social Security disability benefits will be reduced by \$1,000.

Chart 7.**Distribution of workers, by diagnostic group and sex, December 2025**

Among disabled workers who are also receiving workers' compensation or public disability benefits, a disease of the musculoskeletal system and connective tissue was the primary diagnosis in December 2025. Depressive, bipolar, and related disorders were the second leading disabling condition for women. Injuries were the second leading disabling condition for men. A disorder of the nervous system and sense organs was the third most common disability. All other impairments were fairly evenly split between men and women.

BENEFITS AWARDED, WITHHELD, AND TERMINATED

Chart 8.**Social Security disability benefit awards, 1980–2025**

Overall, the number of disability awards has risen from 446,083 in 1980 to 745,396 in 2025. Fluctuations during that period were predominately driven by changes in the number of awards to disabled workers. In 2025, there were 633,307 awards to disabled workers; 93,025 awards to disabled adult children; and 19,064 awards to disabled widow(er)s.

SOURCE: Table 35.

Chart 9.**Average monthly benefit awards, by sex, 2025**

The average monthly benefit awarded to disabled workers is higher than that awarded to disabled widow(er)s or disabled adult children. The reason for the difference is that disabled workers receive 100 percent of the primary insurance amount, compared with 71.5 percent for disabled widow(er)s and 50 percent for disabled adult children (if the worker is disabled or retired) or 75 percent (if the worker is deceased).

Because men have traditionally had higher earnings than women, their monthly benefit is higher. This is most obvious in the disabled-worker group. Benefits for disabled widow(er)s and disabled adult children are dependents' benefits, so their monthly benefit is a function of the worker's earnings. Therefore, a disabled widow's average benefit tends to be higher than that of a disabled widower because average earnings are higher for male workers than for female workers. Benefit amounts are about the same for men and women in the disabled adult children group.

SOURCE: Table 36.

Chart 10.**Disabled-worker awards, by selected diagnostic group, 2025**

In 2025, benefits were awarded to 633,307 disabled workers. Among those awardees, the most common impairment was diseases of the musculoskeletal system and connective tissue (36.4 percent), followed by mental disorders (12.7 percent), neoplasms (11.7 percent), diseases of the circulatory system (11.3 percent), and diseases of the nervous system and sense organs (9.6 percent). The remaining 18.3 percent of awardees had other impairments.

SOURCE: Social Security Administration, Master Beneficiary Record, 100 percent data.

NOTES: Because of differences in data sources and calculation methods, statistics reported in this table may differ from those reported by Actuarial Services.

Age is based on date of entitlement and not date of award. Entitlement can be retroactive and thus precede the date of award.

FRA = full retirement age; (X) = suppressed to avoid disclosing information about particular individuals.

a. Benefits awarded before the December cost-of-living adjustment are converted to the December rates before averages are computed.

SOURCES: Social Security Administration. For years before 2000, *Annual Statistical Supplement to the Social Security Bulletin*, based on the Master Beneficiary Record, various sampling rates. From 2000 through 2011, Annual Award and Termination Transaction file, 1 percent sample (2000–2001) and 100 percent data (2002–2011). From 2012 onward, Master Beneficiary Record, 100 percent data.

NOTES: Because of differences in data sources and calculation methods, statistics reported in this table may differ from those reported by Actuarial Services.

Age in year of award from 1960 through 1984; age in month of award after 1984.

Data exclude closed period awards in 2002 and 2003 and expedited reinstatement cases from 2002 through 2011.

Starting with 2007, age is based on date of entitlement and not date of award. Entitlement can be retroactive and thus precede the date of award.

FRA = full retirement age.

a. Ages 30–34 were grouped with ages 35–39 before 1996.

b. Combined data for men and women are not available before 2000.

SOURCES: Social Security Administration. For years before 2000, *Annual Statistical Supplement to the Social Security Bulletin*, based on the Master Beneficiary Record, various sampling rates. From 2000 through 2011, Annual Award and Termination Transaction file, 1 percent sample (2000–2001) and 100 percent data (2002–2011). From 2012 onward, Master Beneficiary Record, 100 percent data.

NOTES: Because of differences in data sources and calculation methods, statistics reported in this table may differ from those reported by Actuarial Services.

Data exclude closed period awards in 2002 and 2003 and expedited reinstatement cases from 2002 through 2011.

Before 1995, diagnostic data for cases awarded at the appeals levels were estimated on the basis of the diagnosis of cases allowed at the initial disability determination level.

From 2001 through 2010, the number of awards was slightly affected by special case reviews for several hundred thousand Supplemental Security Income (SSI) recipients who were identified as potentially eligible for Social Security benefits based on previously unrecognized disability-insured status. Many of the resulting awards were to individuals under age 35 with a mental disorder diagnosis.

(L) = less than 0.05 percent; (X) = suppressed to avoid disclosing information about particular individuals; -- = not available.

a. From 1990 onward, AIDS and HIV records are counted in "Infectious and parasitic diseases." Before 1990, they were included in "Other."

b. Intellectual disorders were not identified separately before 1995.

c. Beginning with 2002, several ill-defined impairment codes were reclassified and added to "Unknown."

SOURCES: Social Security Administration. For years before 2000, *Annual Statistical Supplement to the Social Security Bulletin*, based on the Master Beneficiary Record, various sampling rates. From 2000 through 2011, Annual Award and Termination Transaction file, 1 percent sample (2000–2001) and 100 percent data (2002–2011). From 2012 onward, Master Beneficiary Record, 100 percent data.

NOTES: Because of differences in data sources and calculation methods, statistics reported in this table may differ from those reported by Actuarial Services.

Data exclude closed period awards in 2002 and 2003 and expedited reinstatement cases from 2002 through 2011.

Before 1995, diagnostic data for cases awarded at the appeals levels were estimated on the basis of the diagnosis of cases allowed at the initial disability determination level.

From 2001 through 2010, the number of awards was slightly affected by special case reviews for several hundred thousand Supplemental Security Income (SSI) recipients who were identified as potentially eligible for Social Security benefits based on previously unrecognized disability-insured status. Many of the resulting awards were to individuals under age 35 with a mental disorder diagnosis.

Starting with 2007, age is based on date of entitlement and not date of award. Entitlement can be retroactive and thus precede the date of award.

(X) = suppressed to avoid disclosing information about particular individuals; -- = not available.

a. From 1990 onward, AIDS and HIV records are counted in "Infectious and parasitic diseases." Before 1990, they were included in "Other."

b. Intellectual disorders were not identified separately before 1995.

c. Beginning with 2002, several ill-defined impairment codes were reclassified and added to "Unknown."

SOURCES: Social Security Administration. For years before 2000, *Annual Statistical Supplement to the Social Security Bulletin*, based on the Master Beneficiary Record, various sampling rates. From 2000 through 2011, Annual Award and Termination Transaction file, 1 percent sample (2000–2001) and 100 percent data (2002–2011). From 2012 onward, Master Beneficiary Record, 100 percent data.

NOTES: Because of differences in data sources and calculation methods, statistics reported in this table may differ from those reported by Actuarial Services.

Data exclude closed period awards in 2002 and 2003 and expedited reinstatement cases from 2002 through 2011.

Before 1995, diagnostic data for cases awarded at the appeals levels were estimated on the basis of the diagnosis of cases allowed at the initial disability determination level.

From 2001 through 2010, the number of awards was slightly affected by special case reviews for several hundred thousand Supplemental Security Income (SSI) recipients who were identified as potentially eligible for Social Security benefits based on previously unrecognized disability-insured status. Many of the resulting awards were to individuals under age 35 with a mental disorder diagnosis.

Starting with 2007, age is based on date of entitlement and not date of award. Entitlement can be retroactive and thus precede the date of award.

(X) = suppressed to avoid disclosing information about particular individuals; -- = not available.

a. From 1990 onward, AIDS and HIV records are counted in "Infectious and parasitic diseases." Before 1990, they were included in "Other."

b. Intellectual disorders were not identified separately before 1995.

c. Beginning with 2002, several ill-defined impairment codes were reclassified and added to "Unknown."

2025	1,851.30	2,030.94	1,639.66	1,816.10	1,989.14	1,612.25

SOURCES: Social Security Administration. For years before 2000, *Annual Statistical Supplement to the Social Security Bulletin*, based on the Master Beneficiary Record, various sampling rates. From 2000 through 2011, Annual Award and Termination Transaction file, 1 percent sample (2000–2001) and 100 percent data (2002–2011). From 2012 onward, Master Beneficiary Record, 100 percent data.

NOTES: Because of differences in data sources and calculation methods, statistics reported in this table may differ from those reported by Actuarial Services.

Data exclude closed period awards in 2002 and 2003 and expedited reinstatement cases from 2002 through 2011.

Benefits awarded before the December cost-of-living adjustment are converted to the December rates before averages are computed.

Women	23,172	60,093	1,660.85	2,263.83	89.8
By number of children					
1 child	31,213	62,426	1,906.62	2,653.08	85.9
2 children	14,739	44,217	1,936.39	2,788.56	93.4
3 or more children	7,182	31,897	1,808.51	2,575.84	94.3
Worker with—					
Spouse aged 62 or older ^c	3,667	7,341	2,584.59	3,132.93	11.8
Spouse aged 62 or older and 1 or more children	127	417	2,559.40	4,154.94	74.8
Spouse and 1 child	702	2,107	2,312.57	3,430.72	86.9
Spouse and 2 children	545	2,180	2,304.11	3,443.65	94.1
Spouse and 3 or more children	386	2,149	2,127.64	3,145.59	92.7

SOURCE: Social Security Administration, Master Beneficiary Record, 100 percent data.

NOTES: Because of differences in data sources and calculation methods, statistics reported in this table may differ from those reported by Actuarial Services.

A "family" means beneficiaries entitled on one worker's account. The data may understate the number of families with dependents because records of awards to dependents made in a different calendar year are not available for inclusion.

Data include beneficiaries whose benefits are being withheld.

- a. Benefits awarded before the December cost-of-living adjustment are converted to the December rates before averages are computed.
- b. Includes families and worker-only beneficiaries for whom the primary insurance amount is equal to the family maximum amount.
- c. If the spouse is also entitled to a retired-worker benefit, only the benefit amount received as a spouse is included.

SOURCES: Social Security Administration. For years before 2000, *Annual Statistical Supplement to the Social Security Bulletin*, based on the Master Beneficiary Record, various sampling rates; for 2000, Social Security Disability Insurance Beneficiaries, 100 percent data, and Annual Termination file, 100 percent data; from 2001 through 2003, Master Beneficiary Record, 100 percent data; from 2004 through 2011, Annual Award and Termination Transaction file, 100 percent data, and Master Beneficiary Record, 100 percent data. From 2012 onward, Master Beneficiary Record, 100 percent data.

NOTES: Because of differences in data sources and calculation methods, statistics reported in this table may differ from those reported by Actuarial Services.

The termination rate is the number of terminations per 1,000 beneficiaries in current-payment status.

Beginning in 2004, statistics include closed period awards.

SOURCE: Social Security Administration, Master Beneficiary Record, 100 percent data.

NOTES: Because of differences in data sources and calculation methods, statistics reported in this table may differ from those reported by Actuarial Services.

These statistics represent the total number of beneficiaries whose benefits were terminated during the calendar year regardless of the effective date of the termination.

Statistics include closed period awards.

FRA = full retirement age; ... = not applicable; (X) = suppressed to avoid disclosing information about particular individuals.

- a. Benefits from the Disability Insurance Trust Fund are terminated and converted to benefits from the Old-Age and Survivors Insurance Trust Fund.
- b. Dependents' benefits terminate when the disabled worker no longer meets the requirements for disability benefits. Benefits for disabled widow(er)s and disabled adult children also terminate when they no longer meet the requirements for disability benefits.
- c. Excludes disabled beneficiaries whose monthly benefits have been suspended because of substantial gainful activity (SGA) during the extended period of eligibility. These individuals may continue to qualify for Medicare coverage for several years after benefits are suspended.
- d. If a dependent's benefit terminates because the disabled worker no longer meets the requirements for disability benefits, then the specific reason for not meeting the requirements for disability benefits cannot be determined.

OUTCOMES OF APPLICATIONS FOR DISABILITY BENEFITS

Notes

The tables in this section provide statistics on the outcomes of applications for disability benefits. The statistics on applications are derived from the Social Security Administration's (SSA's) Disability Research File. Each year this file is updated with information about applications for disability benefits that is then used to determine the outcome of those applications. The outcome statistics in these tables are reported by year of filing and include decisions made through the conclusion of the administrative appeals process.

Table 60 shows the total number of applications filed in a year, the number that are pending a final decision, the number denied for nonmedical reasons before a medical decision is made (*technical denials*), the outcome of applications for which a medical allowance or denial was made, and award and allowance rates. Applications for which a medical allowance or denial decision was made but which were subsequently denied for nonmedical reasons are shown under the medical decision header as *subsequent denials*. The most common nonmedical reason for denying a claim is insufficient number of recent quarters of coverage.

The allowance rate is calculated by dividing the number of medical allowances (including subsequent technical denials) by the total number of medical decisions made for a 1-year cohort. The award rate is a broader program measure that is calculated as the number of allowances minus subsequent denials divided by total applications (minus pending claims) filed for a given year. For more recent years, the award and allowance rates will change as decisions are made on pending claims.

Tables 61–63 show the allowance rate for Social Security only and the Social Security portion of *concurrent applications* (which are claims for both Social Security and Supplemental Security Income disability benefits). Each table shows a different level in the administrative decision-making process; that is, initial adjudicative, reconsideration, and hearing level or above.

From October 1999 through March 2020, the proportion of claims awarded at each level of the process was affected by a prototype process that SSA tested in 10 states. Under this test, the reconsideration step of the appeals process was eliminated for applications filed October 1, 1999, or later. Elimination of the reconsideration level in these states resulted in a decrease in the aggregate proportion of claims awarded at this step. SSA began phasing out the prototype process on January 1, 2019, and by March 31, 2020, the reconsideration step had been reinstated in all 10 test states.

This section also includes one table that shows the reason for medical allowance and one that shows the reason for medical denial (Tables 64 and 65). The reasons are derived from the sequential evaluation process used by decision makers. SSA maintains a list of impairments that are considered disabling under its regulations. An applicant can be found to be disabled if he or she—

- has a listed impairment,
- has a severe impairment that is equal to a listed impairment,
- has a severe impairment when medical and vocational factors are considered, or
- had previously established entitlement to a disability benefit.

An applicant can be denied benefits if he or she—

- has an impairment that is not expected to last 12 months,
- has an impairment that is not considered severe,
- is able to perform his or her usual type of work, or
- is able to perform another type of work.

Other denial reasons include impairment resulting from drug addiction or alcoholism, insufficient medical evidence, failure to cooperate, failure to follow prescribed treatment, not continuing development of the claim, and returns to substantial work before disability can be established.

Chart 11.**Final outcome of disabled-worker applications, 2015–2024**

The final award rate for disabled-worker applicants has varied over time, averaging 29 percent for claims filed from 2015 through 2024. The share of applicants awarded benefits at the initial claims level has ranged narrowly from 18 percent to 21 percent. The percentages of applicants awarded at the reconsideration and hearing levels have averaged 2 percent and 7 percent, respectively. Denied disability claims have averaged 68 percent.

SOURCE: Tables 60–63.

NOTE: Awards are calculated as medical allowances minus subsequent technical denials. Technical denials include both nonmedical decision technical denials and medical decisions that were subsequently denied for technical reasons.

SOURCE: Social Security Administration, Disability Research File, 100 percent data.

NOTES: Data are current through June 2025 for the initial and reconsideration levels and through July 2025 for the hearing level or above.

Because a number of applications remain pending for more recent years, the award and allowance rates will change over time. Cases can be pending at the initial or appellate levels and can include either medical or technical issues.

Data include decisions for Social Security—only applications and applications for both Social Security and Supplemental Security Income (SSI); they do not include SSI-only applications.

Data from 1992 through 1998 are available for disabled workers only.

a. Applications were denied for nonmedical reasons; therefore no decision was made on severity of impairment.

b. Applications were denied for nonmedical reasons after a decision was made that the applicant did not meet the medical severity criteria for disability benefits.

c. Applications were denied for nonmedical reasons after a decision was made that the applicant met the medical severity criteria for disability benefits.

d. Rate determined by dividing awards by all applications minus pending claims for that year.

e. Rate determined by dividing medical allowances by all medical decisions for that year.

SOURCE: Social Security Administration, Disability Research File, 100 percent data.

NOTES: Data are current through June 2025.

Because a number of applications remain pending for more recent years, the allowance rate will change over time.

Applications with a medical decision may be pending a final nonmedical decision or be subsequently denied for nonmedical reasons.

Data from 1992 through 1998 are available for disabled workers only.

SSI = Supplemental Security Income.

a. Rate determined by dividing medical allowances by all medical decisions for that year.

b. Rate for the Social Security portion only.

CONTACT: statistics@ssa.gov.

SOURCE: Social Security Administration, Disability Research File, 100 percent data.

NOTES: Data are current through June 2025.

Because a number of applications remain pending for more recent years, the allowance rate will change over time.

Applications with a medical decision may be pending a final nonmedical decision or be subsequently denied for nonmedical reasons.

From 1999 through 2020, a prototype process in 10 states (representing 20–25 percent of national disability claims) allowed initial denials to be appealed directly to the hearing level without reconsideration.

Data from 1992 through 1998 are available for disabled workers only.

SSI = Supplemental Security Income.

a. Rate determined by dividing medical allowances by all medical decisions for that year.

b. Rate for the Social Security portion only.

SOURCE: Social Security Administration, Disability Research File, 100 percent data.

NOTES: Data are current through July 2025.

Because a number of applications remain pending for more recent years, the allowance rate will change over time.

Applications with a medical decision may be pending a final nonmedical decision or be subsequently denied for nonmedical reasons.

From 1999 through 2020, a prototype process in 10 states (representing 20–25 percent of national disability claims) allowed initial denials to be appealed directly to the hearing level without reconsideration.

Data from 1992 through 1998 are available for disabled workers only.

SSI = Supplemental Security Income.

a. Rate determined by dividing medical allowances by all medical decisions for that year.

b. Rate for the Social Security portion only.

CONTACT: statistics@ssa.gov.

SOURCE: Social Security Administration, Disability Research File, 100 percent data.

NOTES: Data are current through June 2025 for the initial and reconsideration levels and through July 2025 for the hearing level or above.

Because a number of applications remain pending for more recent years, the numbers and percentages will change over time.

Applications with a medical decision may be pending a final nonmedical decision or be subsequently denied for nonmedical reasons.

Data include decisions for Social Security–only applications and applications for both Social Security and Supplemental Security Income (SSI); they do not include SSI-only applications.

Data from 1992 through 1998 are available for disabled workers only.

a. Includes applications for which the disability was previously established and those for which the basis for the determination is not available.

The majority of applications for which the basis of determination is not available are cases allowed at or above the hearing level.

CONTACT: statistics@ssa.gov.

SOURCE: Social Security Administration, Disability Research File, 100 percent data.

NOTES: Data are current through June 2025 for the initial and reconsideration levels and through July 2025 for the hearing level or above.

Because a number of applications remain pending for more recent years, the numbers and percentages will change over time.

Applications with a medical decision may be pending a final nonmedical decision or be subsequently denied for nonmedical reasons.

Data include decisions for Social Security–only applications and applications for both Social Security and Supplemental Security Income (SSI); they do not include SSI-only applications.

Data from 1992 through 1998 are available for disabled workers only.

(L) = less than 0.05 percent.

a. Applicant has an impairment resulting from drug addiction or alcoholism, provided insufficient medical evidence, failed to cooperate, failed to follow prescribed treatment, did not want to continue development of the claim, or returned to substantial work before disability could be established. Also includes cases denied at or above the hearing level for which the basis of determination is not available.

DISABLED BENEFICIARIES RECEIVING SOCIAL SECURITY, SSI, OR BOTH

Chart 12.**Social Security and SSI beneficiaries aged 18–64 receiving benefits on the basis of disability, December 2025**

In December 2025, about 10.1 million people aged 18–64 received benefits on the basis of disability. Sixty-two percent (6.2 million) received benefits from the Social Security program only, 29 percent (2.9 million) received benefits from the Supplemental Security Income (SSI) program only, and 9 percent (0.9 million) received benefits from both programs concurrently.

Appendix: Sampling Variability

Estimates based on sample data may differ from the figures that would have been obtained had all, rather than specified samples, of the records been used. These differences are termed sampling variability. The standard error is a measure of the sampling variability. About 68 percent of all possible probability samples selected with the same specifications will give estimates within one standard error of the figure obtained from a compilation of all records. Similarly, approximately 90 percent will give estimates within 1.645 standard errors, about 95 percent will give estimates within two standard errors, and about 99 percent will give estimates within two and one-half standard errors. The standard error of an estimate depends on the design elements such as the method of sampling, sample size, and the estimation process.

Because of the large number of data cells tabulated from the sample files, it is not practical to calculate the standard error for every possible cell. However, standard errors for a large number of cells were estimated. These estimates were used to fit regression curves to provide estimates of approximate standard errors associated with tabulated counts and proportions.

The tables showing the sampling variability provide a general order of magnitude for similar estimates from the various sample files. Table A-1 presents approximate standard errors for the estimated number of people from the 1 percent and the 10 percent files. The reliability of an estimated percentage depends on both the size of the percentage and on the size of the total on which the percentage is based. Values in Table A-2 provide approximate standard errors of the estimated percentage of people in the 1 percent and 10 percent files. The standard errors are expressed in percentage points, and the bases shown are in terms of inflated data.

Table A-1.
Approximate standard errors of estimated number of people

Size of estimate (inflated)	Standard error
1 percent file	
500	250
1,000	300
2,500	500
5,000	800
7,500	900
10,000	1,100
