It also is used to estimate the number of non-filers and the magnitude of the effects of noncompliance with IRS and SSA regulations. During those matching steps which occur at the Social Security Administration, identifiable data is solely under the control of a limited number of Social Security employees who are required to uphold the Census and IRS statutes as well as the confidentiality restrictions of the Social Security Administration. Similar provisions are made for the handling of identifiable data from the project at the Census Bureau. Contractors provide storage of and remote terminal access to files which do not carry identifiers.

SAFEGUARDS:

Safeguards are established in accordance with the HHS ADP System Manual, Part 6, ADP System Security. Employees having access to records have been notified of criminal sanctions for unauthorized disclosure of information about individuals. Magnetic tapes or other files with personal identifiers, are retained in secure storage areas accessible only to authorized personnel. Microdata files prepared for purposes of research and analysis are purged of personal identifiers and are subject to procedural safeguards to assure anonymity. (See Appendix I to this publication for additional information relating to safeguards the Social Security Administration employs to protect personal information.)

RETENTION AND DISPOSAL:

Following the match, all identifiers are removed from the records kept at the Social Security Administration. The Census Bureau retains identifiers for possible longitudinal updating.

Records with identifiers will be held in secure storage areas at the Census Bureau and will be disposed of as soon as they are determined to be no longer needed for Census or SSA analysis.

Means of disposal will be appropriate to the record storage medium, e.g., erasure of tapes, shredding of printouts, etc.

As long as identifiable records exist, a periodic review will be made at least every two years to determine the need for their retention.
